<https://bmcinfectdis.biomedcentral.com/articles/10.1186/s12879-023-07998-3> ... 34% (959 of 2840) reported that they knew at least one person who had experienced a significant health problem due to the COVID-19 illness. Similarly, 22% (612 of 2840) of respondents indicated that they knew at least one person who had experienced a severe health problem following COVID-19 vaccination. With these survey data, the total number of fatalities due to COVID-19 inoculation may be as high as 278,000 (95% CI 217,330–332,608) when fatalities that may have occurred regardless of inoculation are removed. Conclusion: Knowing someone who reported serious health issues either from COVID-19 or from COVID-19 vaccination are important factors for the decision to get vaccinated. The large difference in the possible number of fatalities due to COVID-19 vaccination that emerges from this survey and the available governmental data should be further investigated. ...

<https://www.zerohedge.com/markets/cdc-finally-releases-vaers-safety-monitoring-analyses-covid-vaccines> ... CDC’s VAERS safety signal analysis based on reports from Dec. 14, 2020 – July 29, 2022 for mRNA COVID-19 vaccines shows clear safety signals for death and a range of highly concerning thrombo-embolic, cardiac, neurological, hemorrhagic, hematological, immune-system and menstrual adverse events (AEs) among U.S. adults. ... There were 770 different types of adverse events that showed safety signals in ages 18+, of which over 500 (or 2/3) had a larger safety signal than myocarditis/pericarditis. ... The CDC analysis shows that the number of serious adverse events reported in less than two years for mRNA COVID-19 vaccines is 5.5 times larger than all serious reports for vaccines given to adults in the US since 2009 (~73,000 vs. ~13,000). ... Twice as many mRNA COVID-19 vaccine reports were classified as serious compared to all other vaccines given to adults (11% vs. 5.5%). This meets the CDC definition of a safety signal. ... There are 96 safety signals for 12-17 year-olds, which include: myocarditis, pericarditis, Bell’s Palsy, genital ulcerations, high blood pressure and heartrate, menstrual irregularities, cardiac valve incompetencies, pulmonary embolism, cardiac arrhythmias, thromboses, pericardial and pleural effusion, appendicitis and perforated appendix, immune thrombocytopenia, chest pain, increased troponin levels, being in intensive care, and having

anticoagulant therapy. ... There are 66 safety signals for 5-11 year-olds, which include: myocarditis, pericarditis, ventricular dysfunction and cardiac valve incompetencies, pericardial and pleural effusion, chest pain, appendicitis & appendectomies, Kawasaki's disease, menstrual irregularities, vitiligo, and vaccine breakthrough infection. The safety signals cannot be dismissed as due to "stimulated," exaggerated, fraudulent or otherwise artificially inflated reporting, nor can they be dismissed due to the huge number of COVID vaccines administered. There are several reasons why, but the simplest one is this: the safety signal analysis does not depend on the number of reports, but whether or not some AEs are reported at a higher rate for these vaccines than for other non-COVID vaccines. Other reasons are discussed in the full post below. In August, 2022, the CDC told the Epoch Times that the results of their safety signal analysis "were generally consistent with EB [Empirical Bayesian] data mining [conducted by the FDA], revealing no additional unexpected safety signals." So either the FDA's data mining was consistent with the CDC's method—meaning they "generally" found the same large number of highly alarming safety signals—or the signals they did find were expected. Or they were lying. We may never know because the FDA has refused to release their data mining results.

<https://stateofthenation.co/?p=153750> ... American colleges, universities and university systems dig in deeply so they won't be sued out of existence for catastrophic Covid policies. Former White House adviser Dr. Scott Atlas, the Robert Wesson Senior Fellow in health policy at Stanford University's Hoover Institute, wrote an excellent essay recently in the Wall Street Journal. In it, he raises a vital question for all students, parents, faculty, and the broader public, as to how our nation's university system became, along with major media, the most aggressive proponent and distributor of medical ideology and biosecurity policy. University behavior continues to be directed by the CDC and WHO, and it appears that university administration will continue its commitment to a consensus posture toward the COVID phenomenon, until another institution that it considers authoritative tells it otherwise. That is not likely to happen.

Ladapo recommended against the use of mRNA COVID-19 vaccines for males aged 18 to 39. His recommendation was based on a study that found an 84 percent increase in the relative incidence of cardiac-related death among males aged 18 to 39 within 28 days of vaccination. ... Brook Jackson, who used to work for the Ventavia Research Group, the company that conducted Pfizer’s phase III trial in 2020, recently filed a lawsuit in U.S. District Court accusing Pfizer of committing fraud, abuse and protocol violations in its COVID-19 vaccine clinical trials. ... Ed Dowd, former manager at Black Rock, also compiled evidence from the insurance industry, funeral home industry and government databases that prove there was an increase in excess deaths among working-age Americans in 2021 over 2020. In his new book, “Cause unknown,” he noted that non-COVID deaths among people aged 18 to 64 have exploded.

AT-A-GLANCE

A recent laboratory investigation by The Highwire reveals the only consistent thing about the COVID shots are their inconsistency. There is no quality control. Some appear clear like saline, while others are loaded with contaminants

In August 2021, Japan rejected 1.63 million doses of Moderna's mRNA shot due to contamination. Last year the European Medicines Agency (EMA) also expressed concern over vials that were only 50% to 55% pure

The vials also contain massively inconsistent amounts of polyethylene glycol (PEG). PEG can cause anaphylactic shock in some people. PEG also gets in the way of proper immune response

If you are unfortunate enough to get a vial that is loaded with PEG, your risk of adverse effects such as anaphylactic shock and dysregulated immune response is greater than if you get a vial with lower amounts

According to Dr. Ryan Cole, a pathologist, what looks like microchips or nanotechnology in the liquid are actually stacked cholesterol, sugar and salt crystals, and what has been described as parasites are stellate trikons, found on the bottom of leaves. They're likely a contaminant picked up at some point during the lab investigation

Japanese researchers have been instructed to investigate the mechanisms by which experimental mRNA jabs could be causing deaths and severe adverse reactions. ... Hiroshima University School of Medicine Prof. Masataka Nagao highlighted how the bodies of vaccinated persons he performed autopsies on were abnormally warm, with upwards of 100 degree F body temperatures. ... Nagao's research team found there were significant changes to the genetic makeup of vaccinated autopsied patients' immune systems. ... The research has led Nagao to conclude the vaccine causes immune system abnormalities that prompt inflammation throughout the body, which is likely the cause of the high body temperatures at the time of autopsy. ... "Spike proteins are locally suppressing the immune system," Sano told reporters. "As a result, the spike proteins facilitate in reactivation of the herpesvirus." ... The process of the spike proteins degrading in the immune system prompts inflammation throughout the body that also leads to blood clots, Sano concluded. ... "The function of the spike proteins to produce adverse reactions is formation of blood clots," Sano explained. "And even worse, spike proteins can also locally induce inflammation."

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC8438590/> .. ADE ... In some cases, antibodies can enhance virus entry and replication in cells. This phenomenon is called antibody-dependent infection enhancement (ADE). ADE not only promotes the virus to be recognized by the target cell and enters the target cell, but also affects the signal transmission in the target cell. Early formalin-inactivated virus vaccines such as aluminum adjuvants (RSV and measles) have been shown to induce ADE. Although there is no direct evidence that there is ADE in COVID-19, this potential risk is a huge challenge for prevention and vaccine development. This article focuses on the virus-induced ADE phenomenon and its molecular mechanism. It also summarizes various attempts in vaccine research and development to eliminate the ADE phenomenon, and proposes to avoid ADE in vaccine development from the perspective of antigens and adjuvants.

“lifesaving vaccine,” why did excess death spike globally in 2021 and 2022? ... These excess deaths are astronomical compared to 2020, when an alleged pandemic was taking place. Americans had lost nearly three years of life expectancy during 2020 and 2021. In 2019, the average life span of Americans of all ethnicities was 78.8 years. By the end of 2020, it had dropped to 77.0 years and by the end of 2021 it was 76.4

From 2020 to 2021, death rates increased for each age group 1 year and over. The age groups with the highest increases include working age adults, 25 to 54, and children under 4

The leading causes of death in 2021 were heart disease, cancer and COVID-19, all three of which were higher in 2021 than 2020. Unintentional injury and stroke also significantly increased in 2021

Heart disease, stroke and cancer are all now-known side effects of the COVID jabs. Unintentional injuries may also be due to the shots, as you may easily be injured if you pass out or suffer a heart attack or stroke while doing just about anything

If the COVID jabs worked, you’d expect excess mortality to drop, yet that’s not what we’re seeing. We’re also not seeing mass death from COVID. The only clear factor that might account for these discrepancies is mass injection with an experimental gene transfer technology

Much is being made of a recent study showing IgG4 antibodies spiking in the blood labs of those who are triple-injected with the mRNA COVID vaccines. Journalists are speculating that this may be the cause of increased cancers in the COVID-vaccinated. But that is not the main reason that the COVID-vaccinated are getting new cancer cases, sometimes aggressive “turbo cancers,” or coming out of remission from earlier cancer. Rather, there is earlier research that provides more plausible mechanisms for cancer risk, based on abundant prior knowledge of immune function. But.... Let’s look at both the new study on IgG antibodies and earlier research. First, let’s look at the new study on IgG3 versus IgG4 antibodies in the triple-jabbed. Herein, let’s call it the IgG4 study. It finds that the triple-jabbed may be developing a non-inflammatory tolerance to even high levels of spike proteins. That is, rather than having typical dyspnea, cough, olfactory and other full-blown COVID-type symptoms, IgG4 is a tolerant and tolerizing antibody that allows virions and spike protein load to accumulate in the body without the usual symptomatic alarms. ...

finds that COVID-19 vaccines perpetuated the pandemic and caused immune system failure ... Amid thousands of papers on COVID and the vaccines, a new German paper published in Science Immunology should be the headline story this week. Although the subject matter is very dense, the implication of it is that the Pfizer shots (and possibly other mRNA spike protein shots) caused the immune system to misfire, thereby creating an endless feedback loop of viral immune escape, perpetuating the pandemic in the macro, and creating immune suppression for the individuals who received them. see links in article

In the northern Nigerian city of Kano, Pfizer in 1996 administered an experimental drug to 200 children whose parents never knew that their kids were subjected to a clinical trial. Pfizer did not obtain consent or inform any of the children or their parents that they were the subjects of an experiment. The pharma company did not even inform the recipients that the drug has not been approved for wider use. Eleven of the children died. Dozens more of the children suffered severe adverse effects, including brain damage and organ failure. As a result of criminal and civil suits, Pfizer agreed to pay \$75 million to the families harmed. Now, Kano’s residents are reasonably hesitant of any vaccinations.

Safety signals were generated in the VAERS system for death and 769 other severe adverse events. The CDC ignored all of them based on exactly the same bullshit reason that they used 13 years ago with HPV that is just “over reporting.” But there is no evidence whatsoever there is “over reporting.” ... We’ve done direct physician office surveys and nobody is overreporting. In

fact, every piece of evidence shows that there are more reports because the vaccine is so dangerous. Look around you at all the “sudden deaths” and the vaccine injured stories and ask yourself, “Is that overreporting”? ... In addition, over 500 reports had a larger signal than myocarditis which is an acknowledged signal, so they can’t hide behind an “over reporting” excuse. They claimed they looked at all the deaths but didn’t find an association with the vaccine. But they never did the proper tests to actually see if there was vaccine involvement in the deaths. They simply looked the other way. Contrast this with the Schwab paper where they found at least 14% of the deaths post-vaccine were likely caused by the vaccine. How can the CDC find 0 in 15,000 deaths? Answer: when those people’s job’s depend upon finding the politically correct answer. ... When confronted with the fact that that the death, they gaslit the doctor who asked them about it rather than acknowledging the death safety signal triggered. This was deliberate. This was a top CDC official that responded.

Research reveals ivermectin has been safely prescribed by doctors to HUMANS for 25 years, around the globe, and only 28 cases of adverse events have ever been reported in that time. Compare that to Big Pharma’s drugs, including the deadly Remdesivir, that Fauci and his cohorts pushed on Americans so adamantly. The irony is that ivermectin can also save people from the deadly spike-protein “vaccines,” by impairing the spike protein’s ability to attach to human cell membranes and red blood cells, thus helping to prevent blood clots.
