It will be seen . . , that the Erewhonians are a meek and long-suffering people, easily led by the nose, and quick to offer up common sense . . . when a philosopher arises among them . . . SAMUEL BUTLER.
PREFACE

If in this book harsh words are spoken about some of the greatest among the intellectual leaders of mankind, my motive is not, I hope, the wish to belittle them. It springs rather from my conviction that if we wish our civilization to survive we must break with the habit of deference to great men. Great men may make great mistakes; and as the book tries to show, some of the greatest leaders of the past supported the perennial attack on freedom and reason. Their influence, too rarely challenged, continues to mislead those on whose defence civilization depends, and to divide them. The responsibility for this tragic and possibly fatal division becomes ours if we hesitate to be outspoken in our criticism of what admittedly is part of our intellectual heritage. By our reluctance to criticize a part of it, we may help to destroy it all.

The book is a critical introduction to the philosophy of politics and of history, and an examination of some of the principles of social reconstruction. Its aim and the line of approach are indicated in the Introduction. Even where it looks back into the past, its problems are the problems of our own time; and I have tried hard to make it as simple as possible, hoping to clarify matters which concern us all.

Although the book presupposes nothing but open-mindedness
in the reader, its object is not so much to popularize the questions treated as to solve them. In order to serve this double purpose, all matters of more specialized interest have been confined to the notes collected at the end of the book.

ACKNOWLEDGEMENTS

I wish to express my gratitude to all my friends who have made it possible for me to write this book. Mr. C. G. F. Simkin has not only helped me with an earlier version, but has given me the opportunity of clarifying many problems in detailed discussions over a period of nearly four years. Miss Margaret Dalziel has assisted me in the preparation of various drafts and of the final manuscript. Her untiring help has been invaluable. Mr. H. Larsen's interest in the problem of historicism was a great encouragement. Mr. T. K. Ewer has read the manuscript and has made many suggestions for its improvement. Miss Helen Hervey has put a great deal of work into the compilation of the Index.

I am deeply indebted to Professor F. A. von Hayek. Without his interest and support the book would not have been published. Dr. E. Gombrich has undertaken to see the book through the press, a burden to which was added the strain of an exacting correspondence between England and New Zealand. He has been so helpful that I can hardly say how much I owe to him.

K. R. P.
CHRISTCHURCH,
Concerning metaphysics . . , I admit that my formulations may here or there have been insuffi-
ciently conditional and cautious. Yet I do not wish to hide the fact that I can only look with repugnance . . upon the puffed-up pretentious-
ess of all these volumes filled with wisdom, such as are fashionable nowadays. For I am fully satisfied that . . the accepted methods must end-
lessly increase these follies and blunders, and that even the complete annihilation of all these fanciful achievements could not possibly be as harmful as this fictitious science with its accursed fertility.

KANT.

This book raises a number of issues which may not be apparent from the table of contents.

It sketches some of the difficulties faced by a civilization which aims at humaneness and reasonableness, at equality and freedom; a civilization which is still in its infancy, and which continues to grow in spite of the fact that it has been betrayed by so many of the intellectual leaders of mankind. It attempts to show that this civilization has not yet fully recovered from the shock of its birth, the transition from the tribal or * closedl society ', with its submission to magical forces, to the * open society ' which sets free the critical powers of man. It attempts to show that the shock of this transition is one of the factors that have made possible the rise of those reactionary movements which have tried, and still try, to overthrow
civilization and to return to tribalism. And it suggests that what we call nowadays totalitarianism belongs to these movements, which are just as old or just as young as our civilization itself.

It tries thereby to contribute to our understanding of totalitarianism, and of the significance of the perennial Jght against it.

It further tries to examine the application of the critical and rational methods of science to the problems of the open society. It analyses the principles of democratic social reconstruction, the principles of what I may term * piecemen.1 Social engineering * in opposition to c Utopian social engineering ' (as explained in Chapter g). And it tries to clear away some of the obstacles

2 INTRODUCTION

impeding a rational approach to the problems of social reconstruction. It does so by criticizing those social philosophies which are responsible for the widespread prejudice against the possibilities jrf democratic reform. The most powerful of these reactionary philosophies Ts~ one whicR I have called historicism. The story of the rise and influence of some important forms of historicism is one of the main topics of the book, which might even be described as a collection of marginal notes on the development of certain historicist philosophies. A few remarks on the
origin of the book will indicate what is meant by historicism and how it is connected with the other issues mentioned.

Although my main interests are the methods of physics (and consequently certain technical problems which are far removed from those treated in this book), I have also been interested for many years in the problem of the backwardness of the social sciences. This is, of course, nothing but the problem of their method. My interest in this problem was greatly stimulated by the rise of totalitarianism, and by the failure of the various social sciences and social philosophies to make sense of it.

In this connection, one point appeared to me particularly urgent.

Too often we hear it suggested that some form or other of totalitarianism is inevitable. Many who because of their #elli;#e;gen#e; and[ trainmg _shoulc^ be held responsible for what they say, announce that there is no escape from it. They ask us whether we are really naive enough to believe that democracy can be permanent; whether we do not see that it is just one of the many forms of government that come and go in the course of history. They argue that democracy, in order to fight totalitarianism, is forced to copy its methods and thus to become totalitarian itself. Or they assert that our industrial system cannot continue to function without adopting the methods of collectivist planning, and they infer from the inevitability of a collectivist economic system that the adoption of totalitarian
forms of social life is also inevitable.

Such arguments may sound plausible enough. But plausibility is not a reliable guide in such matters. In fact, one should not enter into a discussion of these specious arguments before! Having considered the following question of method: Is it within the power of any social science to make such sweeping historical prophecies? Can we expect to get more than the irresponsible reply of the soothsayer if we ask a man what the future has in store for mankind?

INTRODUCTION

This is a question of the method of the social sciences. It is clearly more fundamental than any debate on any particular argument offered in support of any historical prophecy.

A careful examination of this question has led me to the conviction that such sweeping historical prophecies are entirely beyond the scope of scientific method. The future depends on ourselves, and we do not depend on any historical necessity. There are, however, influential social philosophies which hold the opposite view. They claim that everybody tries to use his brains to predict impending events; that it is certainly legitimate for a strategist to try to foresee the outcome of a battle; and that the boundaries between such a prediction and more sweeping historical prophecies are fluid. They maintain that it is the task of science in general to make predictions, or rather, to
improve upon our everyday predictions, and to put them upon a more secure basis; and that it is the task of the social sciences in particular to furnish us with long-term historical prophecies. They also believe that they have discovered laws of history which enable them to prophesy the course of historical events. The various social philosophies which raise claims of this kind, I have grouped together under the name historicism. Elsewhere, in The Poverty of Historicism (Economic 1944/45), I have tried to argue against these claims, and to show that in spite of their glausibilitY^thgy^ arc ^based^-^jpnu^-^L gross j^jsirnJgr f stanH^ng. jrf scientific^ method. While engaged in the systematic analysis ancTcriticism of thejiain^ I tried as well to collect some material to illustrate its development. The notes collected for that purpose constitute the main part of this book.

The systematic analysis of historicism aims at something like scientific status. This book does not. Many of the opinions expressed are personal. What it owes to scientific method is largely the awareness of its limitations: it does not offer proofs where nothing can be proved, nor does it pretend to be scientific where it cannot give more than a personal point of view. It does not try to replace the old systems of philosophy by a new system. iTdoes not try to add to all these volumes^fille^T with wisdom, to the metaphysics of history and destiny, such as are fashion-able nowadays. It rather tries tojhow that this prophetic
is harmful, that the rr^et^hysi^^histgrjr impede the application of the "piecein<[alj^ soj cjal reformr^ Xn3T It furtheFlnes to show how we may become the niaEers of our fate when we have ceased To pose asTtsTprophets.

4 INTRODUCTION

In tracing the development of historicism, I found that the dangerous liabit^of hutorical prophecy, so widespread among our intellectual leaders, has various^ functions. It is always flattering to belong to the inner circle of the initiated, and to possess the unusual power of predicting the course of history. Besides, there is a tradition that intellectual leaders are giftejd with such powers, and not to possess them may~Ieadjto 1pss.x>&_a&te. The danger, on the other hand7 of their being unmasked as charlatans is very small, since they can always point out that it is certainly permissible to make less sweeping predictions ; and the boundaries between these and augury are fluid.

But there are sometimes further motives for holding historicist beliefs. The prophets who announce that certain events are bound to happen make propaganda for them, and help to bring them about. Their stcu^^a^emocracy^ is nqtjq last for ever is as Jtrue, and as little to the point, as the assertion that human reason Is not to last for ever, since only democracy provides an institutional framework that permits reform without violence,
and so the use of reason in political matters. But their story
tends to discourage those who fight totalitarianism; its motive
is to support the revolt against civilization. A further motive,
it seems, can be found if we consider that historicist
metaphysics are apt to relieve men from the strain of their responsibilities.
If you know that things are bound to happen whatever you do,
then you may feel free to give up the fight against them. The
tendency of historicism to support the revolt against civilization
may be due to the fact that it is itself largely a reaction against
the strain of our civilization, and its demand for personal
responsibility.

These last allusions are somewhat vague, but they must suffice
for an introduction. They will later be substantiated by historical
material, especially in the chapter 'The Open Society
and Its Enemies'. I was tempted to place this chapter at the
beginning of the book; with its topical interest, it would
certainly have made a more inviting introduction. But I found that the full
weight of this historical interpretation cannot be felt unless
it is preceded by the material discussed earlier in the book. It
seems that one has first to be disturbed by the identity of the
Platonic theory of justice with the theory, and
how urgent it is to interpret these matters.

THE OPEN SOCIETY AND ITS ENEMIES
VOL. I
THE SPELL OF PLATO

For the Open Society (about 430 B.C.) :

Although only a few may originate a policy, we are all able to judge it.

PERICLES OF ATHENS.

Against the Open Society (about 80 years later) :

The greatest principle of all is that nobody, whether male or female, should be without a leader. Nor should the mind of anybody be habituated to letting him do anything at all on his own initiative; neither out of zeal, nor even playfully. But in war as well as in the midst of peace to his leader he shall direct his eye and follow him faithfully. And even in the smallest matter he should stand under leadership. For example, he should get up, or move, or wash, or take his meals.. only if he has been told to do so.. In a word, he should teach his soul, by long habit, never to dream of acting independently, and in fact, to become utterly incapable of it.

PLATO OF ATHENS.

THE MYTH OF DESTINY

CHAPTER 1 : HISTORICISM AND THE MYTH OF DESTINY

It is widely believed that a truly scientific and philosophical attitude towards politics, and a deeper understanding of social life in general, must be based upon a contemplation and interpretation of human history. While the ordinary man
takes the setting of his life and the importance of his personal experiences and struggles for granted, it is said that the social scientist or philosopher has to survey things from a higher plane. He sees the individual as a pawn, as a rather insignificant instrument in

THE MYTH OF DESTINY

the general development of mankind. And the really important actors on the Stage of History he may find, perhaps, in the Great Nations and their Great Leaders, or perhaps in the Great Classes, or in the Great Ideas. However this may be, he will try to understand the meaning of the play which is performed on that Stage; he will try to understand the laws of historical development. If he succeeds in this, he will, of course, be able to predict future developments. He might then put politics upon a solid basis, and give us practical advice by telling us which political actions are likely to succeed or likely to fail.

This is a brief description of an attitude which I call historicism. It is an old idea, or rather, a connected set of ideas which unfortunately have become so much a part of our spiritual atmosphere that they are usually taken for granted, and hardly ever questioned. I have tried elsewhere to show that historicist approach to the social sciences gives good results. I have also tried to outline a method which, I believe, would yield
better results.

But if historicism is a faulty method that produces worthless results, then it may be useful to see how it originated, and how succeeded in entrenching itself so successfully. A historical sketch undertaken with this aim can, at the same time, serve to analyse the variety of ideas which have gradually accumulated around the central historicist doctrine that history is controlled by developmental laws whose discovery would enable us to prophesy the destiny of man.

Historicism, which I have so far characterized only in a rather abstract way, can be well illustrated by one of the simplest and oldest of its forms, the doctrine of the chosen people. This doctrine is one of the attempts to make history understandable by a theistic interpretation, i.e. by recognizing God as the author of the play performed on the Historical Stage. The theory of the chosen people, more specifically, assumes that God has selected one people to function as the instrument of His will, and that this people will inherit the earth.

In this doctrine, the law of historical development is laid down by the Will of God. This is the specific difference which distinguishes the theistic form from other forms of historicism. A naturalistic historicism, for instance, might treat the developmental law as a law of nature; a spiritual historicism would treat it as a law of spiritual development; an economic.
CHAPTER I : HISTORICISM

shares with these other forms the doctrine that there is a developmental law which can be discovered, and upon which predictions regarding the future of mankind can be based.

There is no doubt that the doctrine of the chosen people grew out of the tribal form of social life. Tribalism, i.e. the emphasis on the supreme importance of the tribe without which the individual is nothing at all, is an element which we shall find in many forms of historicist theories. Other forms which are not tribalist may still retain the element of collectivism: they may still emphasize the significance of some collective or group without which the individual is nothing at all. Another aspect of the doctrine of the chosen people is the remoteness of what it proffers as the end of history. For although it may describe this end with some degree of definiteness, we have to go a long way before we reach it. And the way is not only long, but winding, leading up and down, right and left. Accordingly, it will be possible to bring every conceivable historical event well within the scheme of the interpretation. Nothing can contradict it. But to those who believe in it, it gives certainty regarding the ultimate outcome of human history.

A criticism of the theistic interpretation of history will be attempted in the last chapter of this book, where it will also be shown that some of the greatest Christian thinkers have
repudiated it as idolatry. An attack upon this form of historicism should therefore not be interpreted as an attack upon religion. In the present chapter, the doctrine of the chosen people serves only as an illustration. Its value as such can be seen from the fact that its chief characteristics are shared by the two most important modern versions of historicism whose analysis will form the major part of this book. The historical philosophy of racialism or fascism on the one hand and the Marxian historical philosophy on the other. For the chosen people racialism substitutes the chosen race (of Gobineau's choice), selected as the instrument of destiny, ultimately to inherit the earth. Marx's historical philosophy substitutes for it the chosen class, the instrument for the creation of the classless society, and at the same time, the class destined to inherit the earth. Both theories base their historical forecasts on an interpretation of history which leads to the discovery of a law of its development. In the case of racialism, this is thought of as a kind of natural law. The biological superiority of the blood of the chosen race explains the course of history, past, present, and future; it is nothing but the struggle of races for mastery. In the case of Marx's philosophy of history, the law is economic; all history has to be interpreted as a struggle of classes for economic
supremacy.

The historicist character of these two movements makes our investigation topical. We shall return to them in later parts of this book. Each of them goes back directly to the philosophy of Hegel. We must, therefore, deal with that philosophy as well. And since Hegel in the main follows certain ancient philosophers, it will be necessary to discuss the theories of Heraclitus, Plato and Aristotle, before returning to the more modern forms of historicism.

CHAPTER 2: HERACLITUS

It is not until Heraclitus, that we find in Greece theories which could be compared in their historicist character with the doctrine of the chosen people. In Homer's theistic interpretation, history is the product of divine will. But the Homeric

$ lay down no general laws for its development. What Homer tries to stress and to explain is not the unity of history, but rather its lack of unity. The author of the play on the Stage of History is not one God; a whole variety of gods dabble in it. What the Homeric interpretation shares with the Jewish is a certain vague feeling of destiny, and the idea of powers behind the scene. But the ultimate destiny, according to Homer, is not disclosed to men. Unlike the Jewish, it remains mysterious.

The first Greek to introduce a more markedly
historicist element was Hesiod, when he made use of the idea of a general trend or tendency in historical development. His interpretation of history is pessimistic. He believes that mankind, in their development down from the golden age, are destined to degenerate, both physically and morally. The culmination of the various historicist ideas proffered by the early Greek philosophers came with Plato, who elaborated his theory in an attempt to interpret the history and social life of the Greek tribes, and especially of the Athenians. In his historicism he was strongly influenced by various forerunners, especially by Hesiod. But the most important influence came from Heraclitus.

Heraclitus was the philosopher who discovered the idea of change. Down to his time, philosophers viewed the world as the totality of things, or as a huge edifice built up of these things. The questions they asked themselves were such as these: *What does the world consist of?* or *How is it constructed, what is its true ground-plan?* They considered philosophy, or physics (the two were indistinguishable for a long time) as the investigation of *nature*, i.e. of the original material out of which this edifice, the world, had been built. As far as any processes were considered, they were thought of either as going on within the edifice, or else as constricting or maintaining it, disturbing and restoring the stability or balance of a structure which was considered to be fundamentally static. This very
natural approach, natural even to many of us to-day, was superseded by the genius of Heraclitus. The view he introduced was that there was no such edifice; that the world was not a more or less stable structure, but rather one colossal process; that it was not the sum-total of all things, but rather the totality of all events, or changes, or facts. 'Everything is in flux and nothing is at rest', is the motto of his philosophy.

Heraclitus' discovery influenced the development of Greek philosophy for a long time. The philosophies of Parmenides, Democritus, Plato, and Aristotle, can all be appropriately described as attempts to solve the problems of that changing world which Heraclitus had discovered. The greatness of this discovery can hardly be overrated. It has been described as a terrifying one, and its effect has been compared with that of *an earthquake, in which everything . . . seems to sway '3. And I do not doubt that this discovery was impressed upon Heraclitus by terrifying personal experiences suffered as a result of the social and political disturbances of his day. Heraclitus, the first philosopher to deal not only with 'nature' but even more with ethico-political problems, lived in an age of social revolution. It was in his time that the Greek tribal aristocracies were beginning to yield to the new force of democracy.
In order to understand the effect of this revolution, we must remember the stability and rigidity of social life in a tribal aristocracy. Social life is determined by social and religious taboos; everybody has his assigned place within the whole of the social structure; everyone feels that his place is the proper, the c natural 'place, assigned to him by the forces which rule the world; everyone 'knows his place'.

Heraclitus' own place was that of heir to the royal family of priest kings of Ephesus, but he resigned in favour of his brother. In spite of his proud refusal to mix himself up with the political life of his city, he supported the cause of the aristocrats who tried in vain to stem the rising tide of the new revolutionary forces. These experiences in the social or political field are reflected in the remaining fragments of his work. 4 * The Ephesians ought to hang themselves man by man, all the adults, and leave the city to be ruled by infants . . .', is one of his outbursts, occasioned, by the people's decision to expatriate Hermodorus, an aristocratic friend of Heraclitus'. His interpretation of the people's motives is most interesting, for it shows that the stock-in-trade of anti-democratic argument has not changed.

CHAPTER 2 I HERACLITUS II

since the earliest days of democracy. * They held: we do not like anyone to excel among us; and if someone is outstanding,
then let him be so elsewhere, and among others.' This hostility

towards democracy breaks through everywhere in the

fragments:
c . . . the mob fill their bellies like the beasts. . .

They take the

bards and popular belief as their guides, unaware that

the many

are mean and that only the few are noble. . . In Priene

Bias, son of Tenthamas, whose opinion counts more than

most.

He said : " Most men are wicked "... The mob does not
care, not even about the things they stumble upon ; nor
can they grasp a lesson though they think they do.' In the

same

vein he says : * The law can demand, too, that the will

of One

Man must be obeyed.' Another expression of Heraclitus'

con-
servative and anti-democratic outlook is, incidentally, quite

acceptable to democrats in its wording, though not in its intention :

4 A people ought to fight for the laws of the city as

its walls.'

But Heraclitus' fight for the ancient laws of his city

was in

vain, and the transitoriness of all things impressed itself strongly

upon him. His theory of change gives expression to this

feeling 5 :
c Everything is in flux ', he said ; and ' You cannot

step twice

into the same river.' Disillusioned, he argued against the belief

that the existing social order would remain for ever :
c One must

not act and talk like those reared with the narrow outlook " As

it has been handed down to us ".'

This emphasis on change, and especially on change in

social

life, is a noteworthy characteristic not only of Heraclitus' phil-
osophy but of historicism in general. That things, and even kings, change, is a truth which needs to be impressed especially upon those who take their social environment too much for granted. So much is to be admitted. But in the Heraclitean philosophy one of the less commendable characteristics of historicism manifests itself, namely, an over-emphasis upon change, combined with the complementary belief in an inexorable law of destiny. Every process in the world develops according to a definite law, its measure. Heraclitus visualizes this law of destiny in an interesting way. It is inexorable and irresistible, and to this extent it resembles our modern conception of natural law as well as the conception of developmental laws of modern historicists. But it differs from these conceptions in so far as it is enforced by punishments, just as laws imposed by the state.

This failure! to distinguish between legal laws or norms on the

12 THE MYTH OF DESTINY

one hand and natural laws or regularities on the other is characteristic of tribal tabooism: both kinds of law alike are treated as magical, which makes a rational criticism of the man-made taboos as inconceivable as an attempt to improve upon the regularities of the natural world: All events proceed with the necessity of fate... The sun will not outstep the
measure of his path; but if he does, then the goddesses of Fate, the handmaids of Justice, will know how to find him. . . The order of the world, which is the same for all things, has not been made, neither by a god nor by a man. It always was, is, and will be, an eternally living fire, with a law that measures its flaring up and a law that measures its dying down. . . In its advance, the Fire will judge and convict everything.'

Combined with the historicist idea of a relentless destiny we frequently find an element of mysticism. A critical analysis of mysticism will be given in chapter 24. Here I wish only to show the role of anti-rationalism and mysticism in Heraclitus' philosophy. 'Nature loves to hide', he writes, and 'The Lord who owns the oracle of Delphi neither reveals nor conceals, but he shows his meaning through signs'. Heraclitus' contempt of the more empirically minded scientists is typical of those who adopt this attitude: 'Who knows many things need not have many brains; for otherwise Hesiod and Pythagoras would have had more, and also Xenophanes. . .' Along with this scorn of scientists goes the mystical theory of an intuitive understanding which is given to the chosen, to those who are awake, who have the power to see, hear, and speak. 'One must not act and talk as if asleep. . . Those who are awake have One common world; those who are asleep, turn to their private worlds. . . They are incapable both of listening and of talking. . . Even if they
do hear they are like the deaf. The saying applies to them:
They are present yet they are not present. . . One thing alone
is wisdom: to understand the thought which steers everything
through everything.' The world experienced in common by
those who are awake is the mystical unity, the oneness of all
things: * One must follow what is common to all. . . 
The thought is common to all. . . All becomes One and One
becomes All. . . The One which alone is wisdom wishes and
does not wish to be called by the name of Zeus. . . It is the
thunderbolt which steers everything through everything.'

So much for the more general features of the Heraclitean
philosophy of universal change and hidden destiny.*

CHAPTER 2 : HERACLITUS 13

springs a theory of the driving force behind all change
; a theory
which exhibits its historicist character, by its emphasis upon the
importance of a 'social dynamics' as opposed to a 'social
statics'. Heraclitus' dynamics of nature in general and especially
of social life confirms the view that his philosophy was inspired
by the social and political disturbances he had experienced. For
he declares that strife or war is the dynamic as well as the creative
principle of all change, and especially of all differences between
men. And being a typical historicist, he accepts the judgement
of history as a moral one 9, holding that the outcome of war is
always just 10: * War is the father and king of all
things. It proves some to be gods and others to be mere men, by turning the latter into slaves and the former into masters, . . . One must know that strife is common to everything, and that war is justice, and that all things develop through strife and by necessity.

But if war is just, if c the goddesses of Fate ' are at the same time c the handmaids of Justice ', if history, or more precisely, if success, i.e. success in war, is the criterion of merit, then the standard of merit must itself be c in flux '. Heraclitus meets this problem by his relativism, and by his doctrine of the identity of opposites. This springs from his theory of change. A changing thing must give up some property and acquire the opposite property. It is not so much a thing as a process of transition from one state to an opposite state, and thereby a unification of the opposite states 11 : ' Cold things become warm and warm things become cold ; what is moist becomes dry and what is dry becomes moist. . . . Disease enables us to appreciate health. . . . Life and death, being awake and being asleep, youth and old age, all this is identical ; for the one turns into the other and the latter returns into the former. . . . The path that leads up and the path that leads down are identical. . . . The divergent agrees with itself : it is a harmony resulting from opposite tensions, as in the bow, or in the lyre. . . . The opposites belong to each other, the best harmony results from discord, and everything develops by strife. . . . Good and bad are identical.'
But the ethical relativism expressed in the last
fragment does
not prevent Heraclitus from developing upon the
background
of his theory of the justice of war and the verdict of
history a
tribalist and romantic ethic of Fame, Fate, and the
superiority
of the Great Man, all strangely similar* to some very
modern
ideas ia : ' Who falls fighting will be glorified by
gods and by
men...' The greater the fall the more glorious the
fate...'

14 THE MYTH OF DESTINY

The best seek one thing above all others : eternal
fame... One
man is worth more than ten thousand, if he is Great.'

It is surprising to find in these early fragments,
dating from
about 500 B.C., so much that is characteristic of
modern anti-
democratic and historicist tendencies. But apart from
the fact
that many of these ideas have, through the medium of
Plato,
become part of the main body of philosophic tradition,
the
similarity of doctrine can perhaps be to some extent
explained
by the similarity of social conditions at the different
periods
during which it arises. It seems as if historicist
ideas easily
become prominent in times of great social change. They
appeared when Greek tribal life broke up, as well as
when that
of the Jews was shattered by the impact of the
Babylonian
conquest 15. There can be little doubt, I believe,
that Heraclitus 5
philosophy is an expression of a feeling of drift ; a
feeling which
seems to be a typical reaction to the dissolution of the ancient tribal forms of social life. In modern Europe, historicist Ideas were revived during the industrial revolution, and especially through the impact of the political revolutions in America and France. It appears to be more than a mere coincidence that Hegel, who adopted so much of Heraclitus' thought and passed it on to all modern historicist movements, was a mouthpiece of the reaction against the French Revolution.

CHAPTER 3 : PLATO'S THEORY OF IDEAS

Plato lived in a period of wars and of political strife which was, for all we know, even more severe than that which had troubled Heraclitus. Before his time, the breakdown of the tribal life of the Greeks had led in Athens, his native city, to a period of tyranny, and later to the establishment of a democracy which tried jealously to guard itself against any attempts to reintroduce either a tyranny or an oligarchy, i.e. a rule of the leading aristocratic families. During Plato's youth, democratic Athens was involved in a deadly war against Sparta, the leading city-state of the Peloponnese, which had preserved many of the laws and customs of the ancient tribal aristocracy. The Peloponnesian war lasted, with an interruption, for twenty-eight years. (In chapter 10, where the historical background is reviewed in more detail, it will be shown that the war did not end with the fall of Athens in 404 B.C., as is sometimes asserted.)
Plato was born during the war, and he was about twenty-four when it ended. It brought terrible epidemics, and, in its last year, famine, the fall of the city of Athens, civil war, and a rule of terror, usually called the rule of the Thirty Tyrants; these were led by two of Plato's uncles, who both lost their lives in the course of the civil war. Even the peace and the re-establishment of the democracy meant no respite for Plato. His beloved teacher Socrates, whom he later made the main speaker of most of his dialogues, was tried and executed. Plato himself seems to have been in danger; together with other companions of Socrates, he left Athens.

Later, on a visit to Sicily, Plato became entangled in the political intrigues which were spun at the court of Dionysius I, tyrant of Syracuse, and even after his return to Athens and the foundation of the Academy, Plato continued along with some of his pupils to take an active part in the conspiracies and revolutions that constituted Syracusan politics.

This brief outline of political events may help to explain why, Plato, like Heraclitus, suffered deeply from the instability and the lack of security in the political life of his time. Like Heraclitus, Plato was of royal blood; at least, the tradition claims that his father's family traced it to descent from Codrus, the last of the tribal kings of Attica. Plato was very proud of

'5
his mother's family which, as he explains in one of his last dialogues, the Timaeus, was related to that of Solon, the lawgiver of Athens. To it belonged also his uncles, Critias and Charmides the leading men of the Thirty Tyrants. With such a family tradition, Plato could be expected to take a deep interest in public affairs; and indeed, most of his works confirm this expectation. He himself relates that he was from the beginning most anxious for political activity, but that he was deterred by the stirring experiences of his youth. ' Seeing that everything swayed and shifted without plan, I became desperate/ From the feeling that society, and indeed everything, was in flux, arose the fundamental impulse of his philosophy as well as of the philosophy of Heraclitus; and as his historicist predecessor had done, so Plato summed up his social experience by proffering a law of historical development. According to this law, which will be more fully discussed in the next chapter, social change was degeneration. Even though in some of Plato's works there is a suggestion of a cyclic development, leading up again after the lowest point of extreme evil was passed, the main trend is one of decay. Our own cosmic period, more particularly, is for a long time to come (its length is 18,000 years) a period of deterioration, and this period is the only one that plays any role in Plato's philosophy of history. The other part of the cycle, the
period
of the rise, is nowhere clearly referred to, and the
few vague
hints given are not sufficient to show whether Plato
really believed
in it. In what follows, I shall therefore confine my
analysis to
the main doctrine of Plato's historicism, namely, to
the doctrine
that the law of historical development is one of
degeneration or
decay 6.

So far we have seen only similarities between Plato and
Heraclitus. But there is an important difference. Plato
believed
in the possibility of breaking through this fatal
circle, and of
putting an end to the process of decay. He believed in the
possibility of arresting all political change.
Accordingly, this
becomes the aim he strives for *. He tries to realize it by
establishing a state which is free from the evils of
all other states,
because it does not change. It is the best, the
arrested state.

Important as this difference is, it gives rise to a
further point
of similarity between Plato and Heraclitus. Heraclitus had
generalized his experience of social flux by extending it to the
world of * all things ', and Plato, I have hinted, did the same.
But Plato also extended his belief in a perfect state
tlytt does not

CHAPTER 3 : PLATO'S THEORY OF IDEAS 17

decay to the realm of * all things '. He believed that to every
kind of ordinary or decaying things, there corresponds also a
perfect thing that does not decay. This belief in
perfect and unchanging things, usually called the Theory of Forms or Ideas, became the central doctrine of his philosophy.

Plato's belief that it is possible for us to break the iron law of destiny and to avoid decay by arresting all change, shows that his historicist tendencies had definite limitations. A radical and fully developed historicism does not admit that man, by any effort, can alter the laws of historical destiny even after he has discovered them. He cannot work against them, since all his plans and actions are means by which the inexorable laws of development realize his historical destiny, just as Oedipus met his fate because of the prophecy and the measures taken by his father for avoiding it, and not in spite of them. In order to gain a better understanding of this radical historicist attitude, and to analyse the opposite tendency inherent in Plato's belief that he could influence fate, I shall contrast historicism with a diametrically opposite approach which may be called the attitude of social engineering.

The social engineer does not ask any questions about historical tendencies or the destiny of man. He believes that man is the master of his own destiny, and that in accordance with our aims, we can influence or change the history of man just as we have changed the face of the earth. He does not believe that these ends are imposed upon us by our historical background or by the trends of history, but rather that they are freely created by
ourselves, just as we create new thoughts or new works of art or new houses or new machinery. As opposed to the historicist who believes that intelligent political action is possible only if the future course of history is first determined, the social engineer believes that the scientific basis of politics would be very different; it would be the factual information necessary for the construction or alteration of social institutions, in accordance with our wishes and aims. Such a science would have to tell us what steps we must take if we wish, for instance, to avoid depressions, or else to produce depressions; or if we wish to make the distribution of wealth more even, or less even. In other words, the social engineer conceives as the scientific basis of politics something like a social technology (Plato, as we shall see, compares it with the scientific background of medicine), as opposed to the historicist who understands it as a science of immutable historical tendencies.

18 THE MYTH OF DESTINY

From what I have said about the attitude of the social engineer, it must not be inferred that there are no important differences within the camp of the social engineers. One such difference between what I call 'piecemeal social engineering' and c Utopian social engineering ', will be the main theme of chapter 9, where I shall give my reasons 10 for advocating the former and rejecting the latter. But for the time being, I am concerned only with the opposition between historicism
and social engineering. This opposition can perhaps be further clarified if we consider the attitudes taken up by the historicist and by the social engineer towards social institutions.

The historicist is inclined to look upon social institutions mainly from the point of view of their history, i.e. their origin, their development, and their present and future significance. He may perhaps insist that their origin is due to a definite plan or design and to the pursuit of definite ends, either human or divine; or he may assert that they are not designed to serve any clearly conceived ends, but are rather the immediate expression of certain instincts and passions; or he may assert that they have once served as means to definite ends, but that they have lost this character. The social engineer and technologist, on the other hand, will hardly take much interest in the origin of institutions, or in the original intentions of their founders. Rather, he will put his problem like this. If such and such are our aims, is this institution well designed and organized to serve them? As an example we may consider the institution of insurance. The social engineer or technologist will not worry much about the question whether insurance originated as a profit-seeking business; or whether its historical mission is to serve the common weal. But he may offer a criticism of certain institutions of insurances, showing, perhaps, how to increase their profits, or, which is a very different thing, how to increase the benefit they render to the public; and he will suggest
ways in which they could be made more efficient in serving the one end or the other. As another example of a social institution, we may consider a police force. Some historicists may describe it as an instrument for the protection of freedom and security, others as an instrument of class rule and oppression. The social engineer or technologist, however, would perhaps suggest measures that would irfoke it a suitable instrument for the protection of freedom and security, and he might also devise measures by which it could be turned into a powerful weapon for class rule. (In his function as a citizen who has certain ends in which he believes, he may demand that these ends, and the appropriate measures, should be adopted. But as a technologist, he would carefully distinguish between the question of the ends and their choice and questions concerning the facts, i.e. the social effects of any measure which might be taken n .)

CHAPTER 3 : PLATO'S THEORY OF IDEAS 19

Speaking more generally, we can say that the engineer or the technologist approaches institutions rationally as means that servd certain ends, and that as a technologist he judges them wholly according to their appropriateness, efficiency, simplicity, etc. The historicist, on the other hand, would rather attempt to find out the "true role" played by these institutions in the development of history, evaluating them, for instance, as *
willed by God', or c willed by Fate', or c serving important historical trends', etc.

The two attitudes, historicism and social engineering, occur sometimes in rather typical combinations. The earliest and probably the most influential example of these is the social and political philosophy of Plato. It combines, as it were, some fairly obvious technological elements in the background displayed by an display of jupkally Historicist T features; The"C"ofnBmation is representative of a number of social and political philosophers who produced what have been later described as Utopian systems. All these systems recommend some kind of social engineering, since they demand the adoption of certain institutional means, though not always very realistic ones, for the achievement of their ends. But when we proceed to a consideration of these ends, then we frequently find that they are determined by historicism. Plato's political ends, especially, depend to a considerable extent on his historicist doctrines. First, it is his aim to escape the Heraclitean flux, manifested in social revolution and historical decay. Secondly, he believes that this can be done by establishing a state which is so perfect that it does not participate in the general trend of historical development. Thirdly, he believes that the model or original of his perfect state can be found in the distant past, in the dawn of history; for if the world decays in time, then we
must find increasing perfection the further we go back into the past. The perfect state is something like the first ancestor, the primogenitor, of the later states, which are, as it were^ the degenerate offspring of this perfect, or best, or c ideal ' state ia ; an ideal state which is not a mere phantasm, nor a dream, but

20 THE MYTH OF DESTINY

which is in its stability more real indeed than all those decaying societies which are in flux, and liable to pass away at any moment.

Thus even Plato's political end, the best state, is largely dependent on his historicism; and what is true of his philosophy of the state can be extended, as already indicated, to his general philosophy of * all things *. The things in flux, the degenerate and decaying things, are (like the state) the offspring, the children, as it were, of perfect things. And like children, they are copies of their original primogenitors. The father or original of a thing in flux is what Plato calls its ' Form ' or its ' Pattern ' or its c Idea '. As before, we must insist that the Form or Idea, in spite of its name, is no

* idea in our mind * ; it is not a phantasm, nor a dream, but a real thing. It is, indeed, more real than all the ordinary things which are in flux, and which, in spite of their apparent solidity, are doomed to decay; for the Form or Idea is a thing that is
perfect, and does not perish.

The Forms or Ideas must not be thought to dwell, like perishable things, in space and time. They are outside space, and also outside time (because they are eternal). But they are in contact with space and time; for since they are the primo-genitors of the things which develop and decay in space and time, they must have been in contact with space, at the beginning of time. Since they are not with us in our space and time, they cannot be perceived by our senses, as can the ordinary changing things which interact with our senses and are therefore called *sensible things*. Those sensible things which are copies or children of the same original, resemble not only this original their Form or Idea, but also one another, as do children of the same family; and as children are called by the name of their father, so are the sensible things, which bear the name of their Forms or Ideas; 'They are all called after them', as Aristotle says 15.

This comparison between the Form or Idea of a class of sensible things and the father of a family of children is developed by Plato in the Timaeus, one of his latest dialogues. It is in close agreement 14 with much of his earlier writing on which it throws considerable light. But in the Timaeus, Plato goes one step beyond his earlier teaching when he represents the contact of the Form or Idea with the world of space and time by an extension of his simile. He describes the abstract *space* in
which the sensible things move (originally the space or gap

CHAPTER 3 : PLATO S THEORY OF IDEAS 21

between heaven and earth) as a receptacle, and compares it with
the mother of things, in which at the beginning of time the
sensible things are created by the Forms which stamp or impress
themselves upon pure space, and thereby give the offspring their
shape. c We must conceive ', writes Plato, c three kinds of
things : first, those which undergo generation ;
secondly, that
in which generation takes place, and thirdly, the model in whose
likeness the generated things are born. And we may compare
the receiving principle to a mother, and the model to a father,
and their product to a child/ And he goes on to
describe first
the fathers, the unchanging Forms or Ideas : * There is first the
unchanging Form, uncreated and indestructible, . . invisible and
imperceptible by any sense, and which can be contemplated only
by pure thought. ' To any single one of these Forms or Ideas
belongs its offspring or race of sensible things, ' another kind of
things, bearing the name of their Form and resembling it, but
perceptible to sense, created, always in flux, generated in a place
and again vanishing from that place, and apprehended by opinion
based upon perception '. And the abstract space which is
likened to the mother, is described thus : * There is a third kind,
which is space, and is eternal, and cannot be destroyed, arid
which provides a home for all generated things. . .' 15

It may contribute to the understanding of Plato's theory of Forms or Ideas if we compare it with certain Greek religious beliefs. As in many primitive religions, some at least of the Greek gods are nothing but idealized tribal primogenitors and heroes. Accordingly, certain tribes and families traced their ancestry to one or other of the gods. (Plato's own family is reported to have traced its descent from the god Poseidon ic.)

We have only to consider that these gods are immortal or eternal, and perfect (or very nearly so) while men are involved in the flux of all things, and subject to decay (which indeed is the ultimate destiny of every human individual), in order to see that these gods are related to men in the same way as Plato's Forms or Ideas are related to those sensible things which are their copies (or his perfect state to the various states now existing).

There is, however, an important difference between Greek mythology and Plato's Theory of Forms or Ideas. While the Greek venerated many gods as the ancestors of various tribes or families, the Theory of Ideas demands that there should be only one Form or Idea of man (or perhaps one Form or Idea of the Greek man, and one each of the various Barbarian races 18);

22 THE MYTH OF DESTINY

for it is one of the central doctrines of the Theory of Forms that
there is only one Form of every * race ' or c kind ' of things. The
uniqueness of the Form which corresponds to the
uniqueness of
the primogenitor is demanded if the theory is to
perform one of
its most important functions, namely, to explain the
similarity
of sensible things, by proposing that the similar
things are copies
or imprints of one Form. Thus if there were two equal
or similar
Forms, their similarity would force us to assume that they are
both copies of a third original, which therefore would be the only
true and single Form. Or, as Plato puts it in the
Timaeus:
c The resemblance would thus be explained, more
precisely, not
as one between these two things, but in reference to
that superior
thing which is their prototype.' 10 In the Republic,
which is
earlier than the Timaeus, Plato had explained his point
even
more clearly, using as his example the j essential bed
', i.e. the
Form or Idea of a bed : c God . . has made one
essential bed,
and only one ; two or more he did not produce, and
never will. . .
For . . even if God were to make two, and no more, then
another
would be brought to light, namely the Form exhibited by
those
two ; this, and not those two, would then be the
essential bed/ 20

This argument shows that the Forms or Ideas provide
Plato
not only with an origin or starting point for all
developments in
space and time (and especially for human history) but
also with
an explanation of the similarities between sensible
things of the
same kind. If things are similar because of some property
which they share, for instance, r whiteness, or hardness, or goodness, then this property must be one and the same in all of them; otherwise it would not make them similar. According to Plato, they all participate in the one Form or Idea of whiteness, if they are white; of hardness, if they are hard. They participate in the sense in which children participate in their father's possessions and gifts; just as the many particular reproductions of an etching which are all impressions from one and the same plate, and hence similar to one another may participate in the beauty of the original.

The fact that this theory is designed to explain the similarities in sensible things does not seem at first sight to be in any way connected with historicism. But it is; and as Aristotle tells us, it was just this connection which induced Plato to develop the Theory of Ideas. I shall attempt to give an outline of this development, using Aristotle's account together with some indications in Plato's own writings.

CHAPTER 3 : PLATO'S THEORY OF IDEAS 23

If all things are in continuous flux, then it is impossible to say anything definite about them. We can have no real knowledge of them, but, at the best, vague and delusive 'opinions'. This point, as we know from Plato and Aristotle 21, worried many followers of Heraclitus. Parmenides, one of Plato's predecessors who influenced him greatly, had taught
that the pure knowledge of reason, as opposed to the delusive opinion of experience, could have as its object only a world which did not change, and that the pure knowledge of reason did in fact reveal such a world. But the unchanging and undivided reality which Parmenides thought he had discovered behind the world of perishable things 22, was entirely unrelated to this world in which we live and die. It was therefore incapable of explaining it.

With this, Plato could not be satisfied. Much as he disliked and despised this empirical world of flux, he was, at bottom, most deeply interested in it. He wanted to unveil the secret of its decay, of its violent changes, and of its unhappiness. He hoped to discover the means of its salvation. He was interested in Parmenides' doctrine of an unchanging, real, and perfect world behind this ghostly world in which he suffered, but it did not solve his problems as long as it remained unrelated to the world of sensible things. What he was looking for was knowledge, not opinion; the pure rational knowledge of a world that does not change; but, at the same time, knowledge that could be used to investigate this changing world, and especially, this changing society, political change, with its strange historical laws. Plato aimed at discovering the secret of the royal knowledge of politics, of the art of ruling men.

But an exact science of politics seemed as impossible as any exact knowledge of a world in flux; there were no
fixed objects
in the political field. How could one discuss any political
questions when the meaning of words like 'government'
or 'state' or 'city' changed with every new phase in the historical
development? Political theory must have seemed to Plato in
his Heraclitean period to be just as elusive, fluctuating, and
unfathomable as political practice.

In this situation Plato obtained, as Aristotle tells us, a most
important hint from Socrates. Socrates was interested in ethical
matters; he was an ethical reformer, a moralist who pestered all
types of people, forcing them to think, to explain, and to account
for the principles of their actions. He used to question them and
was not easily satisfied by their answers. The typical reply, we

24 THE MYTH OF DESTINY

act so, because it is 'wise' to act in this, way (or 'efficient', or
*just', or *pious*, etc.) only incited him to continue his questions
by asking what is wisdom; or efficiency; or justice; or piety.
So he discussed, for instance, the wisdom displayed in various
trades and professions, in order to find out what is common to
all these various and changing *wise* ways of behaviour, and so
to find out what *wisdom* really means, or (using Aristotle's
way of putting it) what its essence is. *It was natural', says
Aristotle, *that Socrates should search for the essence' 23, i.e.
for the real, the unchanging or essential meaning of
In this connection he became the first to raise the problem of universal definitions. 3

These attempts of Socrates to discuss ethical terms like 'justice' or *modesty' or *piety' have been rightly compared with modern discussions on Liberty (by Mill 24, for instance), or on Authority, or on the Individual and Society (by Catlin, for instance). There is no need to assume that Socrates, in his search for the unchanging or essential meaning of such terms, personified them, or that he treated them like things. Aristotle's report at least suggests that he did not, and that it was Plato who developed Socrates' method of searching for the meaning or essence into a method of determining the real nature, the Form or Idea of a thing. Plato retained 'the Heraclitean doctrines that all sensible things are ever in a state of flux, and that there is no knowledge about them ', but found in Socrates' method a way out of these difficulties. Though there * could be no definition of any sensible thing, as they were always changing', there could be definitions and true knowledge of things of a different kind. 'If knowledge or thought were to have an object, there would have to be some different, some unchanging entities, apart from those which are sensible ', says Aristotle 25, and he reports of Plato that 'things of this other sort, then, he called Forms or Ideas, and the sensible things, he said, were distinct from them, and all called ^fter them. And the many things
which have the same name as a certain Form or Idea exist by participating in it/

This account of Aristotle's corresponds exactly to Plato's own arguments proffered in the Timaeus * 8, and it shows that Plato's fundamental problem was to find a scientific method of dealing with sensible things. He wanted to obtain purely rational knowledge, and not merely opinion; and since pure knowledge of sensible things could not be obtained, he insisted, as mentioned

CHAPTER 3: PLATO'S THEORY OF IDEAS 25

before, on obtaining at least such pure knowledge as was in some way related, and applicable, to sensible things. Knowledge of the Forms or Ideas fulfilled this demand, since the Form was related to its sensible things like a father to his children who are under age. The Form was the accountable representative of the sensible things, and could therefore be consulted in important questions concerning the world of flux.

According to our analysis, the theory of Forms or Ideas has at least three different functions in Plato's philosophy, (i) It is an important methodological device, for it makes possible pure scientific knowledge, and even knowledge which could be applied to the world of changing things of which we cannot immediately obtain any knowledge, but only opinion. Thus it becomes possible to enquire into the problems of a changing society, and to build up a political science. (2) It provides the
clue to a theory of change and decay, to a theory of generation and degeneration, and especially, the clue to history. (3) It opens a way, in the social realm, towards some kind of social engineering; and it makes possible the forging of instruments for arresting social change, since it suggests designing a 'best state' which so closely resembles the Form or Idea of a state that it cannot decay.

Problem (2), the theory of change and of history, will be dealt with in the next two chapters, 4 and 5, where Plato's descriptive sociology is treated, i.e. his description and explanation of the changing social world in which he lived.

Problem (3), the arresting of social change, will be dealt with in chapters 6 to 9, treating Plato's political programme. Problem (i), that of Plato's methodology, has with the help of Aristotle's account of the history of Plato's theory been briefly outlined in the present chapter. To this discussion, I wish to add here a few more remarks.

I use the name methodological essentialism to characterize the view, held by Plato and many of his followers, that it is the task of pure knowledge or science to discover and to describe the true nature of things, i.e. their hidden reality or essence. It was Plato's peculiar belief that the essence of sensible things can be found in their primogenitors or Forms. But many of the later methodological essentialists, for instance, Aristotle, did not altogether follow him in this, although they all agreed
with him
in determining the task of pure knowledge 'as the
discovery of
the hidden nature or Form or essence of things. All these
methodological essentialists also agreed with Plato in
maintaining
O.S.I.E. VOL. i B

26 THE MYTH OF DESTINY

that these essences may be discovered and discerned with the
help of intellectual intuition; that every essence has a name
proper to it, the name after which the sensible things are
called; and that it may be described in words. And a descrip-
tion of the essence of a thing they all called a
definition. Accord-
ing to methodological essentialism, there can be three ways of
knowing a thing: * I mean that we can know its unchanging
reality or essence; and that we can know the
definition of the
essence; and that we can know its name. Accordingly, two
questions may be formulated about any real thing. . . : A person
may give the name and ask for the definition; or he may give
the definition and ask for the name.' As an example of this
method, Plato uses the essence of c even' (as opposed to c odd '):
' Number . . may be a thing capable of division into equal
parts. If it is so divisible, number is named " even " ; and the
definition of the name " even " is "a number divisible into
equal parts" ... And when we are given the name and asked
about the definition, . or when we are given the definition and
asked about the name, we speak, in both cases, of one and the same essence, whether we call it now "even" or "a number divisible into equal parts." After this example, Plato proceeds to apply this method to a proof concerning the real nature of the soul, about which we shall hear more later.

Methodological essentialism, i.e. the theory that it is the aim of science to reveal essences and to describe them by means of definitions, can be better understood when contrasted with its opposite, methodological nominalism. Instead of aiming at finding out what a thing really is, and at defining its true nature, methodological nominalism aims at describing how a thing behaves, and especially, whether there are any regularities in its behaviour. In other words, methodological nominalism sees the aim of science in the description of the things and events of our experience, and in an *explanation* of these events, i.e. their description with the help of universal laws. And it sees in our language, and especially in the rules which distinguish properly constructed sentences and inferences from a mere heap of words, the great instrument of scientific description; words it considers rather as subsidiary tools for this task, and not as names of essences. The methodological nominalist will never think that a 'question like 'What is energy?,' or 'What is movement?' or 'What is an atom?' is an important question for physics; but he will consider important a question like: 'How can the energy of
the sun be made useful?" or "How does a planet move?" or "Under what condition does an atom radiate light?"

And to those philosophers who tell him that before having answered the "what" question he cannot hope to give exact answers to any of the "how" questions, he will reply, if at all, by pointing out that he much prefers that modest degree of exactness which he can achieve by his methods to the pretentious muddle which they have achieved by theirs.

As indicated by our example, methodological nominalism is nowadays fairly generally accepted in the natural sciences. The problems of the social sciences, on the other hand, are still for the most part treated by essentialist methods. This is, in my opinion, one of the main reasons for their backwardness. But many who have noticed this situation judge it differently. They believe that the difference in method is necessary, and that it reflects an essential difference between the natures of these two fields of research.

The arguments usually offered in support of this view emphasize the importance of change in society, and exhibit other features of historicism. The physicist, so runs a typical argument, deals with objects like energy or atoms which, though changing, retain a certain degree of constancy. He can describe the changes encountered by these relatively unchanging entities, and
does not have to construct or detect essences or Forms or similar
unchanging entities in order to obtain something
permanent of
which he can make definite pronouncements. The social
scientist, however, is in a very different position.
His whole
field of interest is changing. There are no permanent
entities in
the social realm where everything is under the sway of historical
flux. How, for instance, can we study government? How
could
we identify it in the diversity of governmental
institutions, found
in different states at different historical periods,
without assuming
that they have something essentially in common? We
call an
institution a government if we think that it is
essentially a govern-
ment, i.e. if it complies with the intuition of what a
government
is, an intuition which we can formulate in a
definition. The
same would hold good for other sociological entities,
such as
* civilization '. We have to grasp their essence, and
to lay it
down in the form of a definition.

These modern arguments are, I think, very similar to those
Deported above which, according to Aristotle, led Plato
to his
doctrine of Forms or Ideas. The only difference is that Plato

28 THE MYTH OF DESTINY

(who did not accept the atomic theory and knew nothing about
energy) applied his doctrine to the realm of physics
also, and
thus to the world as a whole. We have here an
indication of the
fact that in the social sciences, a discussion of
Plato's methods may be topical even to-day.

Before proceeding to Plato's sociology and to the use he made of his methodological essentialism in that field, I wish to make it quite clear that I am confining my treatment of Plato to his historicism, and to his *best state*. I must therefore warn the reader not to expect a representation of the whole of Plato's philosophy, or what may be called a *fair and just* treatment of Platonism. My attitude towards historicism is one of frank hostility, based upon the conviction that historicism is futile, and worse than that. My survey of the historicist features in Platonism is therefore strongly critical. Although I admire much in Plato, especially those parts which I believe to be Socratic, I do not think it my task to add to the countless tributes to his genius. I am, rather, bent on destroying what is in my opinion most mischievous in this philosophy. This is Plato's political totalitarianism, the criticism of which is here, I believe, carried considerably further than by those other recent critics who first pointed out the distinctly fascist flavour of Plato's politics.

CHAPTER 4 : CHANGE AND REST

Plato was one of the first social scientists and undoubtedly by far the most influential. In the sense in which the term *sociology* was understood by Comte, Mill, and Spencer, he was a sociologist; that is to say, he successfully
applied his ideaJisLjmethod to an Analysis of the social life of man, and of the laws of its development as well as the laws and conditions of its stability. In spite of Plato's great influence, this side of his teaching has been little noticed. This seems to be due to two factors. First of all, much of Plato's sociology is presented by him in such close connection with his ethical and political demands that the descriptive elements have been largely overlooked. Secondly, many of his thoughts were so far taken for granted that they were simply absorbed unconsciously and therefore uncritically. It is mainly in this way that his sociological theories became so influential.

Plato's sociology is an ingenious blend of speculation with acute observation of facts. Its speculative setting is, of course, the theory of Forms and of universal flux and decay, of generation and degeneration. But on this idealist foundation Plato constructs an astonishingly realistic theory of society, capable of explaining the main trends in the historical development of the Greek city-states as well as the social and political forces at work in his own day.

The speculative or metaphysical setting of Plato's theory of social change has already been sketched. It is the world of unchanging Forms or Ideas, of which the world of changing things in space and time is the offspring. The Forms or Ideas are not only unchanging, indestructible, and incorruptible, but
also perfect, true, real, and good; in fact, e good is once, in
the Republic, explained as c everything that preserves', and
' evil ' as * everything that destroys or corrupts '.
The perfect and good Forms or Ideas are prior to the copies, the sensible
things, and they are something like primogenitors or starting
points of all the changes in the world of flux. This view is
used for evaluating the general trend and main direction of all

30 PLATO'S SOCIOLOGY

changes in the world of sensible things. For if the starting
point of all change is perfect and good, then change can only
be a movement that leads away from the perfect and good;
it must be directed towards the imperfect and the evil, towards
corruption.

This theory can be developed in detail. The more closely
a sensible thing resembles its Form or Idea, the less corruptible
it must be, since the Forms themselves are incorruptible. But
sensible things are not perfect copies; indeed, no copy can be
perfect, since it is only an imitation of the true reality, only
appearance and illusion, not the truth. Accordingly, no sensible
things resemble their Forms sufficiently closely to be unchange-
able. * Only the most divine things remain unchanged ',
says Plato. A sensible thing, if it is a good copy, may change
only very little at first. But every change, however small, must make it different from what it has been before, and must thus make it less perfect by reducing its resemblance to its Form. In this way, the thing becomes more changeable with every change, and more corruptible, since it becomes further removed from its Form, which is its * cause of immobility and of being at rest ', as Aristotle says. Thus we can understand why Plato teaches in the Laws, the last of his great dialogues, that c any change whatever, with the possible exception of the change of an evil thing, is the most terrible danger that can be imagined ', adding for the sake of emphasis : ' And this is true of all things, except the evil ones, as mentioned before.' In brief, Plato teaches that change is evil, and rest divine.

We see now that Plato's theory of Forms or Ideas implies a certain trend in the development of the world in flux. It leads to the law that the corruptibility of all things in that world must continually increase. It is not so much a rigid law of universally increasing corruption, but rather a law of increasing corruptibility ; that is to say, the danger or the likelihood of corruption increases, but exceptional developments in the other direction are not excluded. Thus it is possible, as the last quotation indicates, that very evil things, for instance a very evil city, may be improved by change. (In order that such an improvement should be of any value, we would have to try to make it permanent, i.e. to arrest all further change.)
In full accordance with this general theory is Plato's story, in the Timaeus, of the origin of species. According to this story, man, the highest of animals, is generated by the god^; the other species originate from him by a process of corruption and degeneration. First, certain men degenerate into women. Later, step by step, they degenerate into the lower animals. Birds, we hear, came into being through the transformation of harmless but too easy-going people who would trust their senses too much; 'land animals came from' men who had no interest in philosophy'; and fishes, including shell-fish, c degenerated from the most foolish, stupid, and . . unworthy' of all men 4.

It is clear that this theory can be applied to human society, and to its history. It then explains Hesiod's 5 pessimistic developmental law, the law of historical decay. If we are to believe Aristotle's report outlined in the last chapter, then the theory of Forms or Ideas was originally introduced in order to meet a methodological demand, the demand for pure or rational knowledge which is impossible in the case of sensible things in flux. We now see that the theory does more than that. Over and above meeting these methodological demands, it explains the general direction of the flux of all sensible things, and thereby the historical tendency to degenerate shown by
man
and human society. (And it docs still more; as we
shall see
in chapter 6, the theory of Forms determines the trend
of Plato's
political demands also, and even the means for their
realization.)
If, as I believe, the philosophies of Plato as well as
Heraclitus
sprang from their social experience, especially from
the experi-
ence of class war and from the abject feeling that
their social
world was going to pieces, then we can understand why
the
theory of Forms came to play such an important part in
Plato's
philosophy when he found that it was capable of
explaining
the trend towards degeneration. He must have welcomed
it as
the solution of a most mystifying riddle. While
Heraclitus had
been unable to pass a direct ethical condemnation upon
the
trend of the political development, Plato found, in his
theory
of Forms, the theoretical basis for a pessimistic
judgement in
Hesiod's vein.

But Plato's greatness as a sociologist does not lie in
his general
and abstract speculations about the law of social
decay. It
lies rather in the wealth and detail of his
observations, and in
the amazing acuteness of his sociological, intuition.
He saw
things which not only had not been seen before him, but
which
were rediscovered only in our own tinte. As an example
I
may mention his theory of the primitive beginnings of
society,
of tribal patriarchy, and, in general, his attempt to
outline the
32 PLATO'S SOCIOLOGY

typical periods in the development of social life. Another example is Plato's sociological and economic historicism, his emphasis on the economic background of political life and historical developments; a theory revived by Marx under the name 'historical materialism'. A third example is Plato's most interesting law of political revolutions, according to which all revolutions presuppose a disunited ruling class; a law which forms the basis of his analysis of the means of arresting political change and creating social equilibrium, and which has been recently rediscovered by the theoreticians of totalitarianism, especially by Pareto.

I shall now proceed to a more detailed discussion of these points, especially the third, the theory of revolution and of equilibrium.

The dialogues in which Plato discusses these questions are, in chronological order, the Republic, a dialogue of much later date called the Statesman (or the Politicus), and the Laws, the latest and longest of his works. In spite of certain minor differences, there is much agreement between these dialogues, which are in some respects parallel, in others complementary to one another. The Laws 6, for instance, present the story of the decline and fall of human society as an account of Greek pre-history merging without any break into history; while the
parallel passages of the Republic give, in a more abstract way, a systematic outline of the development of government; the Statesman, still more abstract, gives a logical classification of types of government, with only a few allusions to historical events. Similarly, the Laws formulate the historicist aspect of the investigation more clearly than any of the other dialogue^
' What is the archetype or origin of a state ? ' asks Plato there, linking this question with the other : * Can the evolution of a state change in both directions, towards the good as well as towards the evil ? ' But within the sociological doctrines, the only major difference appears to be due to a purely speculative difficulty which seems to have worried Plato. Assuming as the starting point of the development a perfect and therefore incorruptible state, he found it difficult to explain the first change, the Fall of Man, as it were, which sets everything going 7 . We shall hear, in the next chapter, of Plato's attempt to solve this problem ; but first I shall give a general survey of his theory of social development.

According to the Republic, the original or primitive form of

CHAPTER 4 : CHANGE AND REST 33

society, and at the same time, the one that resembles the Form or Idea of a state most closely, the ' best state ', is a kingship of the wisest and most godlike of men. This ideal state is so
near perfection that it is hard to understand how it can ever change. Still, a change does take place; and with it enters Heraclitus' strife, the driving force of all movement. According to Plato, internal strife, class war, fomented by self-interest and especially material or economic self-interest, is the main force of 'social dynamics'. The Marxian formula *The history of all hitherto existing societies is a history of class struggle*, fits Plato's historicism nearly as well as that of Marx. The four most conspicuous periods or 'landmarks in the history of political degeneration', and, at the same time, 'the most important\.\.\.\ varieties of existing states', are described by Plato in the following order. First after the perfect state comes *timarchy* or *timocracy*, the rule of the noble who seek honour and fame; secondly, oligarchy, the rule of the rich families; next in order, democracy is born*, the rule of liberty which means lawlessness, and last comes e tyranny. The fourth and final sickness of the city *.

As can be seen from the last remark, Plato looks upon history, which to him is a history of social decay, as if it were the history of an illness; the patient is society; and, as we shall see later, the statesman ought to be a physician (and vice versa). Just as the description of the typical course of an illness is not always applicable to every individual patient, so is Plato's historical theory of social decay not intended to apply to the development of every individual city. But it is intended to
describe both the original course of development by which the main forms of constitutional decay were first generated, and the typical course of social change. We see that Plato aimed at setting out a system of historical periods governed by developmental law, i.e., at a historicist theory of society; an attempt which was revived by Rousseau, and was made fashionable by Comte and Mill, and by Hegel and Marx. And considering the historical evidence then available, Plato's system of historical periods was just as good as that of any of these modern historicists. (The main difference lies in the evaluation of the course taken by history. While the aristocrat Plato hated the development he described, these modern authors loved it, believing as they did in a law of historical progress.)

Before discussing Plato's perfect state in any detail, I shall

34 PLATO'S SOCIOLOGY

give a brief sketch of the role played by economic motives and the class struggle in the process of transition between the four decaying forms of the state. The first form into which the perfect state degenerates, timocracy, the rule of the ambitious noblemen, is said to be in nearly all respects similar to the perfect state itself. It is important to note that Plato identifies this best and oldest among the existing states with the Dorian constitution of Sparta and Crete, and that these two
tribal aristocracies did indeed represent the oldest existing form of political life within Greece. Most of Plato's excellent description of their institutions is given in his description of the best or perfect state, to which timocracy is so similar. The main difference is that the latter contains an element of instability; the once united patriarchal ruling class is now disunited, and it is this disunity which leads to the next step, to its degeneration into oligarchy. Disunion is brought about by ambition. 'First', says Plato, speaking of the young timocrat, 'he hears his mother complaining that her husband is not one of the rulers.'

Thus he becomes ambitious and longs for distinction. But decisive in bringing about the next change are competitive and acquisitive social tendencies. * We must describe *, says Plato, * how timocracy changes into oligarchy .. Even a blind man must see how it changes .. It is the treasure house that ruins this constitution* They ' (the timocrats) ' begin by creating opportunities for showing off and spending money, and to this end they twist the laws, and they and their wives disobey them .. ; and they try to outrival one another.' In this Way arises the first class conflict ; that between virtue and money, or between the old-established ways of feudal simplicity and the new ways of wealth. The transition to oligarchy is completed when the rich establish a law that c disqualifies from public office all those whose means do not reach the stipulated amount.
This change is imposed by force of arms, should threats and blackmail not succeed."

With the establishment of the oligarchy, a state of potential civil war between the oligarchs and the poorer classes is reached: 'just as a sick body... is sometimes at strife with itself...', so is this sick city. It falls ill and makes war on itself on the slightest pretext, whenever the one party or the other manages to obtain help from outside, the one from an oligarchic city, or the other from a democracy. And does not this sick state sometimes break into civil war even without any such help from

CHAPTER 4: CHANGE AND REST 35

'13 This civil war begets democracy: 'Democracy is^ born... when the poor win the day, killing some... banishing others, and sharing with the rest the rights of citizenship and of public offices, on terms of equality...'

Plato's description of democracy is a vivid but intensely hostile and unjust parody of the political life of Athens, and of the democratic creed which Pericles had formulated in a manner which has never been surpassed, about three years before Plato was born. (Pericles' programme is discussed in chapter 10, below 14.) Plato's description is a brilliant piece of political propaganda, and we can appreciate what harm it must have done if we consider, for instance, that a man like Adam, an
excellent scholar and editor of the Republic, is unable to resist the rhetoric of Plato's denunciation of his native city. 6 Plato's description of the genesis of the democratic man ', Adam 16 writes, * is one of the most royal and magnificent pieces of writing in the whole range of literature, whether ancient or modern.' And when the same writer continues : ' the description of the democratic man as the chameleon of the human society paints him for all time ', then we see that Plato has succeeded in turning one man at least against democracy, and we may wonder how much damage his poisonous writing has done when presented, unopposed, to lesser minds. . .

As usual when Plato's style, to use a phrase of Adam's 16 , ' becomes a ' full tide of lofty thoughts and images and words ', it does so because he urgently needs a cloak to cover the intellectual nakedness of his arguments, or rather, the total absence of any rational thought whatever. He uses invective instead, identifying liberty with lawlessness, freedom with licence, and equality before the law with disorder. Democrats are described as profligate and niggardly, as insolent, lawless, and shameless, as fierce and as terrible beasts of prey, as gratifying every whim, as living solely for pleasure, and for unnecessary and unclean desires. ( c They fill their bellies like'the beasts ', was Heraclitus' way of putting it.) They are accused of calling c reverence a folly . . ; temperance they call cowardice . . ; moderation and orderly expenditure they call meanness and boorishness ' 17 ,
etc. c And there are more trifles of this kind ', says
Plato, when
the flood of his rhetorical abuse begins to abate, ' the school-
master fears and flatters his pupils . . . , and old men condescend
to the young . . in order to avoid the appearance of being
sour and despotic.' (It is Plato the Masjer of the
Academy

36 PLATO'S SOCIOLOGY

who puts this into the mouth of Socrates, forgetting that the
latter had never been a schoolmaster, and that even as an old
man he had never appeared to be sour or despotic. He had
always loved, not to * condescend ' to the young, but
to treat
them, for instance the young Plato, as his comrades.) c But
the height of all this abundance of freedom . . is
reached ',
Plato continues, c when slaves, male as well as female, who have
been bought on the market, are every whit as free as those
whose property they are . . . And what is the cumulative
effect of all this ? That the citizens' hearts become
so very
tender that they are irritated at the mere sight of slavery and
do not suffer anybody to submit to it, not even in its
mildest
forms/ Here, after all, Plato pays homage to his native
city, even though he does it unwittingly. It will for ever
remain
one of the greatest triumphs of Athenian democracy that it
treated slaves humanely, and that in spite of the inhuman
propaganda of philosophers like Plato himself and Aristotle it
came, as he witnesses, very close to abolishing
of much greater merit, though it too is inspired by hatred, is Plato's description of tyranny and especially of the transition to it. He insists that he describes things which he has seen himself; no doubt, the allusion is to his experiences at the court of Dionysius I, tyrant of Syracuse. The transition from democracy to tyranny, Plato says, is most easily brought about by a popular leader who knows how to exploit the class antagonism between the rich and the poor within the democratic state, and who succeeds in building up a bodyguard or a private army of his own. The people who have hailed him first as the champion of freedom are soon enslaved; and then they must fight for him, in one war after another which he must stir up, in order to make people feel the need of a general.

With tyranny, the most abject state is reached.

A very similar survey of the various forms of government can be found in the Statesrtian, where Plato discusses 'the origin of the tyrant and king, of oligarchies and aristocracies, and of democracies.' Again we find that the various forms of existing governments are explained as debased copies of the true model or Form of the state, of the perfect state, the standard of all imitations, which is said to have existed in the ancient times of Cronos, father of Zeus. One difference is that Plato here distinguishes six types of debased states; but this difference is unimportant, especially if we remember that Plato says in
CHAPTER 4 I CHANGE AND REST 37

the Republic 22 that the four types discussed are not exhaustive, and that there are some intermediate stages. The six types are arrived at, in the Statesman, by first distinguishing between three forms of government, the rule of one man, of a few, and of the many. Each of these is then subdivided into two types, of which one is comparatively good and the other bad, according to whether or not they imitate * the only true original ' by copying and preserving its ancient laws 23. In this way, three conservative or lawful and three utterly depraved or lawless form; are distinguished; monarchy, aristocracy, and a conservative form of democracy, are the lawful imitations, in order of merit. But democracy changes into its lawless form, and deteriorates further, through oligarchy, the lawless rule of the few, into a lawless rule of the one, tyranny, which, just as Plato has said in the Republic, is the worst of all. " v

That tyranny, the most evil statej need not be the end of the development is indicated in a passage in the Laws which partly repeats, and partly 24 connects with, the story of the Statesman. ' Give me a state governed by a young tyrant', exclaims Plato there, c . . who has the good fortune to be the contemporary of a great legislator, and to meet him by some happy accident. What more could a^od do for a city which
he wants to make happy? ' Tyranny, the most evil state, ma
be reformed in this way. (This agrees with the remark in the
Laws, quoted above, that all change is evil, ' with the possible
exception of the change of an evil thing '. There is no doubt
that Plato, when speaking of the great lawgiver and the young
tyrant, must have been thinking of himself and his various ill-
fated experiments with young tyrants which will be dealt with
later, and especially of his attempts at reforming the younger
Dionysius' tyranny over Syracuse.)

One of the main objects of Plato's analysis of political development
is to ascertain the driving force of all historical change.
In the Laws, the historical survey is explicitly undertaken with
this aim in view: * Have not uncounted thousands of cities
been born during this time . . and has not each of them been
under a! kinds of government? . . Let us, if we can, get hold
of the cause of so much change. I hope that we may thus reveal the secret both of the birth of constitutions, and also of
their changes or revolutions.' 25 As the result of these investigations he discovers the sociological law that internal disunion,
class war fomented by the antagonism of economic class interests,

38 PLATO'S SOCIOLOGY

is the driving force of all political revolutions. But Plato's
formulation of this fundamental law goes even further. He
insists that only internal sedition within the ruling
class itself
can weaken it so much that its rule can be overthrown.
' Changes in any constitution originate, without exception,
within the ruling class itself, and only when this class becomes
the seat of disunion ' 26 , is his formula in the Republic ; and in
the Laws he says (possibly referring to this passage of the
Republic) : ' How can a kingship, or any other form of govern-
ment, ever be destroyed by anybody but the rulers themselves ?
Have we forgotten what we said a while ago, when dealing with
this subject, as we did the other day ? ' This sociological law,
together with the observation that economic interests are the
most likely causes of disunion, is Plato's clue to history. But
it is more. It is also the clue to his analysis of the conditions
necessary for the establishment of political equilibrium, i.e. for
arresting political change. He assumes that these conditions
were realized in the best or perfect state of ancient times.

Plato's description of the perfect or best state has usually
been interpreted as the Utopian programme of a progressivist.
In spite of his repeated assertions, in the Republic, Timaeus, and
Critias, that he is describing the distant past, and in spite of the
parallel passages in the Laws whose historical intention is obvious,
it is assumed that it was his whole intention to give a veiled
description of the future. But I think that Plato meant what
he said, and that many characteristics of his best state, especially
as described in Books Two to Four of the Republic, are intended
(like his accounts of primitive society in the Statesman and the Laws) to be historical, or perhaps pre-historical. It is different with some other features, especially with the kingship of the philosophers (described in Books Five to Seven of the Republic); features of which Plato himself says that they may belong only to the timeless world of Forms or Ideas, to the *City in Heaven*. These intentionally unhistorical features will be discussed later, together with Plato's ethico-political demands. It must, of course, be admitted that he did not intend even in his description of the primitive or ancient constitutions to give an exact historical account; he certainly knew that he did not possess the necessary data for achieving anything like that. But I believe that he made a serious attempt to reconstruct the ancient tribal forms of social life as well as he could. There is no reason to doubt this, especially since the attempt was, in a good number

CHAPTER 4 I CHANGE AND REST 39

of its details, very successful. It could hardly be otherwise, since Plato arrived at his picture by an idealized description of the ancient Cretan and Spartan tribal aristocracies. With his acute sociological intuition he had seen that these forms were not only old, but petrified, arrested; that they were relics of a still older form. And he concluded that this still older form had been even more stable, more securely arrested. This very
ancient and accordingly very good and very stable state he tried to reconstruct in such a way as to make clear how it had been kept free from disunion; how class war had been avoided, and how economic interests had been reduced to a minimum, and kept well under control. These are the main problems of Plato's reconstruction of the best state.

How does Plato solve the problem of avoiding class war? Had he been a progressivist, he might have hit at the idea of a classless, equalitarian society; for, as we can see for instance from his own parody of Athenian democracy, there were strong equalitarian tendencies at work in Athens. But he was not out to construct a state that might come, but a state that had been the father of the Spartan state, which was certainly not a classless society. It was a slave state and accordingly, Plato's best state is based on the most rigid class distinctions. It is a caste state. The problem of avoiding class war is solved, not by abolishing classes, but by giving the ruling class a superiority which is unchallenged, and which cannot be challenged. For, as in Sparta, the ruling class alone is permitted to carry arms, it alone has any political or other rights, and it alone receives education, i.e. a specialized training in the art of keeping down its human sheep or its human cattle. (In fact, its overwhelming superiority disturbs Plato a little; he fears that 'they may worry the sheep', instead of merely shearing them, and act as wolves rather than dogs' 28. This problem is
considered later
in the chapter.) As long as the ruling class is united, there
can be no challenge of their authority, and consequently no
class war.

Plato distinguishes three classes in his best state, the guardians,^, their armed auxiliaries or warriors, and the working class. But* actually there are only two castes, the armed and trained rulers and the unarmed and uneducated ruled, for the guardians are old and wise warriors who have been promoted from the ranks of auxiliaries. That Plato divides his ruling caste into two classes, the guardians and the auxiliaries, without elaborating

40 PLATO'S SOCIOLOGY

similar subdivisions within the working class, is largely due to the fact that he is interested only in the rulers. The workers do not interest him at all, they are only human cattle whose sole function is to provide for the material needs of the ruling class; and Plato even forbids his rulers to legislate for them and their petty problems. For this reason, our information about the workers is extremely scanty; but Plato's silence is not wholly uninterrupted. ' Are there not drudges ', he asks once, c who possess not a spark of intelligence and are unworthy to be admitted into the community, but who have strong bodies for hard labour ? ' 29 Since this nasty remark has given rise to the comforting comment that Plato does not admit slaves
into his city, I may here point out that this view is mistaken. It is true that Plato does not state explicitly that there are slaves in his best city. But in his description of timocracy, the second best state, and the one directly following the best, he says of the timocratic man: 'He will be inclined to treat slaves cruelly, for he does not despise them as much as a well-educated man would.' But since only in the best city can education be found which is superior to that of timocracy, we are bound to conclude that there are slaves in Plato's best city, and that they are properly despised. Plato's righteous contempt for them is probably the reason why he does not elaborate the point. This conclusion is fully corroborated by the Laws, and the most inhuman attitude towards slaves adopted there.

Since the ruling class alone has political power, including the power of keeping the number of the human cattle within such limits as to prevent them from becoming a danger, the whole problem of preserving the state is reduced to that of preserving the internal unity of the master class. How is this unity of the rulers preserved? By training and other psychological influences, but otherwise mainly by the elimination of economic interests which may lead to disunion. This economic abstinence is achieved and controlled by the introduction of communism, i.e. by the abolition of private property, especially in precious metals, which were forbidden in Sparta too. (This
communism is confined to the ruling class, which alone must be kept free from disunion; quarrels among the ruled are not worthy of consideration.) Since all property is common property, there must also be a common ownership of women and children. No member of the ruling class must be able to identify his children, or his parents. The family must be

CHAPTER 4 : CHANGE AND REST 41

destroyed, or rather, extended to cover the whole warrior class. Family loyalties might otherwise become a possible source of disunion; therefore ' each should look upon all as if belonging to one family ' 30 . (That this suggestion was neither so novel nor so revolutionary as it sounds is clear if we consider, Vfor instance, the Spartan restrictions on the privacy of family life, such as common meals, etc., constantly referred to by Platp.) But even this common ownership of women and children is riot quite sufficient to guard the ruling class from all economic dangers. It is important to avoid prosperity as well as poverty. Both are dangers to unity; poverty, because it drives people to adopt desperate means to satisfy their needs; prosperity, because most change has arisen from abundance, from an accumulation of wealth which makes dangerous experiments possible. Only a communist system which has room neither for great want nor for great wealth can reduce economic interests to a minimum, and guarantee the unity of the ruling class.
The communism of the ruling caste can thus be derived from Plato's fundamental sociological law of change; it is a necessary condition of the political stability of his class state. But although an important condition, it is not a sufficient one. In order that the ruling class may feel really united, that it should feel like one tribe, i.e. like one big family, pressure from without the class is as necessary as are the ties between the members of the class. This pressure can be secured by emphasizing and widening the gulf between the rulers and the ruled. The stronger the feeling that the ruled are a different and an altogether inferior race, the stronger will be the sense of unity among the rulers. We arrive in this way at the fundamental principle, announced only after some hesitation, that there must be no mingling between the classes: *Any meddling or changing over from one class to another*, says Plato, *is a great crime against the city and may rightly be denounced as the basest wickedness.* But such a rigid division of the classes must be justified, and an attempt to justify it can only be based on the claim that the rulers are much superior to the ruled. Accordingly, Plato tries to justify his class division by the three-fold claim that the rulers are vastly superior in three respects in race, in education, and in their scale of values. Plato's moral valuations, which are, of course, identical with those of the rulers of his best state, will be discussed in chapters 6 to 8; I may therefore confine myself here to describing some
of his ideas concerning the origin, the breeding, and the education of his ruling class. (Before proceeding to this description, I wish to express my antagonism to the opinion that any kind of superiority, whether racial or educational or moral, would establish a claim to political prerogatives, even if such superiority could be ascertained. Most people in civilized countries nowadays admit racial superiority to be a myth; but even if it were an established fact, it should not create special political rights, though it might create special moral responsibilities for the superior persons. Analogous demands should be made of those who are educationally and morally superior; and I think that the opposite claims of certain intellectualists and moralists only show how utterly unsuccessful their education has been, since it has not even made them aware of their own limitations, and of their Pharisaism.)

If we want to understand Plato's views about the origin, breeding, and education, of his ruling class, we must not lose sight of the two main points of our analysis. We must keep in mind, first of all, that Plato is considering a city of the past, although one connected with the present in such a way that certain of its features are still discernible in existing states, for instance, in Sparta; and secondly, that he is
reconstructing his city with special care for the conditions of its stability, and that he seeks the guarantees for this stability solely within the ruling class itself, and more especially, in its unity and strength.]

Regarding the origin of the ruling class, it may be mentioned that Plato speaks in the Statesman of a time, prior even to that of his best state, when e God himself was the shepherd of men, ruling over them just as man . . still rules over the beasts. There was . . no ownership of women and children ' 32 . This is not merely the simile of the good shepherd ; in the light of what Plato says in the Laws, it must be interpreted more literally than that. For there we are told that this primitive society, which is prior even to the first and best city, is one of nomad hill shepherds under a patriarch : c Government originated '^

says Plato there of the period prior to the first settlement, c . . as^ the rule of the eldest who inherits authority from his father or mother ; all the others followed him like a flock of birds, thus forming one troop ruled by a patriarchal authority, which is the most just of all "claims to royal power." These nomad tribes, we hear, settled in the cities of the Peloponnese, especially in Sparta, under the name of c Dorians f . How this happened

CHAPTER 4 : CHANGE AND REST 43

is not very clearly explained, but we understand Plato's reluctance
when we get a hint that the *settlement* was in fact a violent subjugation. Since this is, for all we know, the true story of the Dorian settlement in the Peloponnese, we have every reason to consider that Plato intended his story as a serious description of prehistoric events; describing not only the origin of the Dorian master race but also the origin of their human cattle, i.e. the original inhabitants. In a parallel passage in the Republic, Plato gives us a mythological yet very pointed description of the conquest itself, when dealing with the origin of the *earthborn*, the ruling class of the best city. (The Myth of the Earthborn will be discussed from a different point of view in chapter 8.) Their victorious march into the city, previously founded by the workers, is described as follows: e After having armed and trained the earthborn, let us make them advance, under the command of the guardians, till they arrive in the city. Then let them look round to find out for their camp the spot that is most suitable for keeping down the inhabitants, should anyone show unwillingness to obey the law, and for holding back external enemies, who may come down like wolves on the fold. 5 This short but triumphant tale of the subjugation of a sedentary population by a conquering war horde (who are identified, in the Statesman, with the nomad hill shepherds of the period before the settlement) must be kept in mind when we interpret Plato's reiterated insistence that good rulers, whether gods or demigods or guardians, are patriarch shepherds
of men, and that the true political art, the art of ruling, is a kind of herdsmanship, i.e. the art of managing and keeping down the human cattle. And it is in this light that we must consider his description of the breeding and training of the auxiliaries who are subject to the rulers like sheep-dogs to the shepherds of the state.

The breeding and the education of the auxiliaries, i.e. of the ruling class of Plato's best state, is, like their carrying of arms, a class symbol and therefore a class prerogative. And like arms, breeding and education are not empty symbols, but instruments of class rule, and necessary conditions of the stability of this rule. They are treated by Plato solely from this point of view, i.e. as powerful political weapons, as means for the herding of the human cattle as well as for the unification of the ruling class.

To this end, it is important that the master class should feel as one superior master race. * The race of the guardians must be kept pure, says Plato (in defence of infanticide), when developing the racialist argument that we breed animals with great care while neglecting our own race, an argument which has been repeated ever since. (Infanticide was not an Athenian institution; Plato, seeing that it was practised at Sparta for
eugenic reasons, concluded that it must be ancient and therefore good.) He demands that the same principles be applied to the breeding of the master race as an experienced breeder applies to dogs, horses, or birds. * If you did not breed them in this way, don't you think that the race of your birds or dogs would quickly degenerate ? 9 argues Plato; and he draws the conclusion that the same principles apply to the race of men'.

The racial qualities demanded from the guardian or an auxiliary are, more specifically, those of a sheep-dog. * Our warrior-athletes . . must be vigilant like watch-dogs \ demands Plato, and he asks : ' Is there any difference, so far as their natural fitness for keeping guard is concerned, between a gallant youth and a well-bred dog ? ' In his enthusiasm and admiration for the dog, Plato goes so far as to discern in him a genuine philosophical nature '; for ' is not the love of learning identical with the philosophical attitude ? ' 

The main difficulty which besets Plato is that guardians and auxiliaries must be endowed with a character that is fierce and gentle at the same time. It is clear that they must be bred to be fierce, since they must meet any danger in a fearless and unconquerable spirit '. Yet c if their nature is to be like that, how are they to be kept from being violent against one another, or against the rest of the citizens ? ' 35 Indeed, it would be * simply monstrous if the shepherds should keep dogs . . who would worry the sheep, behaving like wolves rather than
The problem is important from the point of view of the political equilibrium, or rather, of the stability of the state, for Plato does not rely on an equilibrium of the forces of the various classes, since that would be unstable. A control of the master class and its arbitrary powers through the opposing force of the ruled is out of question, for the superiority of the master class must remain unchallenged. The only admissible control of the master class is therefore self-control. Just as the ruling class must exercise economic* abstinence, i.e. refrain from an excessive economic exploitation of the ruled, so it must also be able to refrain from too great fierceness in its dealings with the ruled.

CHAPTER 4 : CHANGE AND REST 45

But this can only be achieved if the fierceness of its nature is balanced by its gentleness. Plato finds this a very serious problem, since * the fierce nature is the exact opposite of the gentle nature '. His speaker, Socrates, reports that he is perplexed, until he remembers the dog again. c Well-bred dogs are by nature most gentle to their friends and acquaintances, but the very opposite to strangers ', he says. It is therefore proved c that the character we try to give our guardians is not contrary to nature '. The aim of breeding the master race is thus established, and shown to be attainable. It has been derived from an analysis of the conditions which are necessary
Plato's educational aim is exactly the same. It is the purely political aim of stabilizing the state by blending a fierce and a gentle element in the character of the rulers. The two disciplines in which children of the Greek upper class were educated, gymnastics and music (the latter, in the wider sense of the word, included all literary studies), are correlated by Plato with the two elements of character, fierceness and gentleness. 'Have you not observed', asks Plato 36, 'how the character is affected by an exclusive training in gymnastics without music, and how it is affected by the opposite training? . . Exclusive preoccupation with gymnastics produces men who are fiercer than they ought to be, while an analogous preoccupation with music makes them too soft . . But we maintain that our guardians must combine both of these natures . . This is why I say that some god must have given man these two arts, music and gymnastics; and their purpose is not so much to serve soul and body respectively, but rather to tune properly the two main strings', i.e. the two elements of the soul, gentleness and fierceness. 4 These are the outlines of our system of education and training', Plato concludes his analysis.

In spite of the fact that Plato identifies the gentle element of the soul with her philosophic disposition, and in spite of the fact that philosophy is going to play such a dominant role in the later parts of the Republic, he is not at all
biased in favour of the gentle element of the soul, or of musical, i.e. literary, education. His impartiality in balancing the two elements is the more remarkable as it leads him to impose the most severe restrictions on literary education, compared with what was customary in the Athens of his day. This, of course, is only part of his general tendency to prefer Spartan customs to those of

46 PLATO'S SOCIOLOGY

Athens. (Crete, his other model, was even more anti-musical than Sparta 37.) Plato's political principles of literary education are based upon a simple comparison. Sparta, he saw, treated its human cattle just a little too harshly; this is a symptom or even an admission of a feeling of weakness 38, and therefore a symptom of the incipient degeneration of the master class. Athens, on the other hand, was altogether too liberal and slack in her treatment of slaves. Plato took this as proof that Sparta insisted just a little too much on gymnastics, and Athens, of course, far too much on music. This simple estimate enabled him readily to reconstruct what in his opinion must have been the true measure or the true blend of the two elements in the education of the best state, and to lay down the principles of his educational policy. Judged from the Athenian viewpoint, it is nothing but the demand that all literary education be strangled 39 by a close adherence to the example of
Sparta with its strict state control of all literary matters. Not only poetry but even music in the ordinary sense of the term are to be controlled by a rigid censorship and they are to be devoted entirely to increasing the stability of the state by making the young more conscious of class discipline, and thus more ready to serve class interests. Plato even forgets that it is the function of music to make the young more gentle, for he demands such forms of music as will make them braver, i.e. fiercer. (Considering that Plato was an Athenian, his arguments concerning music proper appear to me almost intolerable in their reactionary and superstitious intolerance, especially if compared with a more enlightened contemporary criticism. But even now he has many musicians on his side, possibly because they are flattered by his high opinion of the importance of music, i.e. of its political power. The same is true of educationists, and even more of philosophers, since Plato demands that they should rule; a demand which will be discussed in chapter 8.)

The political principle that determines the education of the soul, namely, the preservation of the stability of the state, determines also that of the body. The aim is simply that of Sparta. While the Athenian citizen was educated to a general versatility, Plato demands that the ruling class shall be trained as a class of professional warriors, ready to strike against enemies from without or from within the state. Children of both sexes,
we are told twice, ' must be taken on horseback within
the
sight of actual war ; and provided it can be done safely, they

CHAPTER 4 : CHANGE AND REST 47

must be brought into battle, and made to taste blood ;
just as
one does with young hounds ' 42 . The description of a
modern
writer who characterizes contemporary totalitarian
education
as * an intensified and continual form of mobilization
', fits
Plato's whole system of education very well indeed.

This is an outline of Plato's theory of the best or
most ancient
state, in which the human cattle were treated just as a
wise
but hardened shepherd treats his sheep ; not too
cruelly, but
with the proper contempt. . . . As an analysis both of
Spartan
social institutions and of the conditions of their
stability and
instability, and as an attempt at reconstructing more
rigid and
primitive forms of tribal life, this description is
excellent indeed.
(Only the descriptive aspect is dealt with in this
chapter. The
ethical aspects will be discussed later.) I believe
that much
in Plato's writings that has been usually considered as
mere
mythological or Utopian speculation can in this way be
interpreted as sociological description and analysis. If we
look, for
instance, at his myth of the triumphant war hordes
subjugating
a settled population, then we must admit that from the
point
of view of descriptive sociology it is most successful.
In fact,
it could even claim to be an anticipation of an interesting (though possibly too sweeping) modern theory of the origin of the state, according to which centralized and organized political power generally has its origin in such a conquest. 43 There may be more descriptions of this kind in Plato's writings than we can at present estimate.

To sum up. In an attempt to understand and to interpret the changing social world as he experienced it, Plato was led to develop a systematic historicist sociology in great detail. He thought of existing states as decaying copies of an unchanging Form or Idea. He tried to reconstruct this Form or Idea of a state, or at least to describe a society which resembled it as closely as possible. Along with ancient traditions, he used as material for his reconstruction the results of his analysis of Spartan and Cretan social institutions, the most ancient forms of social life he could find in Greece, which he acutely recognized as arrested forms of even older tribal societies. But in order to make a proper use of this material, he needed a principle for distinguishing between the good or original or ancient features of existing institutions, and their, symptoms of decay. This principle he found in his law of political revolutions, according to which disunion in the ruling class, and their pre*

48 PLATO'S SOCIOLOGY

occupation with economic affairs, are the origin of all
social change. His best state was therefore to be reconstructed in such a way as to eliminate all the germs and elements of disunion and decay as radically as this could be done; that is to say, it was to be constructed out of the Spartan state with an eye to the conditions necessary for the unbroken unity of the master class, guaranteed by its economic abstinence, its breeding, and its training. 

Interpreting existing societies as decadent copies of an ideal state, Plato furnished Hesiod's somewhat crude views of human history at once with a theoretical background and with a wealth of practical application. He developed a remarkably realistic historicist theory which found the cause of social change in Heraclitus' disunion, and in the strife of classes in which he recognized the driving as well as the corrupting forces of history. He applied these historicist principles to the story of the Decline and Fall of the Greek city-states, and especially to a criticism of democracy which he described as effeminate and degenerate. And we may add that later, in the Laws 44, he applied them also to a story of the Decline and Fall of the Persian Empire, thus making the beginning of a long series of Decline-and-Fall dramatizations of the histories of empires and civilizations. (O. Spengler's notorious Decline of the West is perhaps the worst but not the last 45 of them.) All this, I think, can be interpreted as an attempt, and a most impressive one, to explain, and to
rationalize, his experience of the breakdown of the tribal society; an experience analogous to that which had led Heraclitus 'to develop the first philosophy of change.

But our analysis of Plato's descriptive sociology is still incomplete. His stories of the Decline and Fall, and with it nearly all the later stories, exhibit at least two features which we have not discussed so far. He conceived these declining societies as some kind of organism, and the decline as a process similar to ageing. And he believed that the decline is well deserved, in the sense that moral decay, a fall and decline of the soul, precedes that of the social body. This aspect of Plato's sociology plays an important role in his theory of the first change, in the Story of the Number and of the Fall of Man. This theory, and its connection with the doctrine of Forms or Ideas, will be discussed in the next chapter.

CHAPTER 5 : NATURE AND CONVENTION

Plato was not the first to approach social phenomena in the spirit of investigation. The beginning of social science goes back at least to the generation of Protagoras, the first of the great thinkers who called themselves * Sophists *. It is marked by the distinction between two different elements in man's environment his natural environment and his social environment. This is a distinction which is difficult to make and to grasp, as can be inferred from the fact that even now
it is not clearly established in our minds. It has been questioned ever since the time of Protagoras. Most of us, it seems, have a strong inclination to accept the peculiarities of our social environment as if they were ' natural '.

It is one of the characteristic features of the magical attitude of a primitive tribal or ' closed ' society that it lives in a charmed circle of unchanging taboos, of laws and customs which are felt to be as inevitable as the rising of the sun, or the cycle of the seasons, or similar obvious regularities of nature. And it is only after this magical ' closed society ' has actually broken down that a theoretical understanding of the difference between * nature ' and * society ' can develop. An analysis of this development presupposes a clear grasp of the distinction between (a) natural laws, or laws of nature, or positive laws, such as the laws of the apparent motion of the sun, or the law of gravity; and (b) normative laws, or standards, or norms, i.e. rules that forbid or demand certain nodes of conduct, or certain procedures; examples are the laws of the Athenian Constitution, or the rules pertaining to the election of Members of Parliament, or the Ten Commandments. I believe that the distinction between natural and normative laws is fundamental, and I think that the various efforts to bridge the gap have been entirely unsuccessful. But I am not going to assume this without discussion. For instance, I shall later discuss the claim that certain norms are c natural ' in some sense or other. But in
order to
discuss such a claim at all, it is necessary first to
distinguish as
clearly as possible between laws in the sense of (a)
and laws in
the sense of (i), and not to confuse the issue 1 by a
bad terminology.
Thus we shall reserve the term ' natural laws *
exclusively for
laws of type (a), and we shall refuse to do as has
often been

49

50 PLATO'S SOCIOLOGY

done and apply this term to any norms which have been claimed
to be c natural '. The confusion is quite unnecessary since it is
easy to speak of c natural rights ' or of c natural
norms ' when
laws of type (V) are meant.

I believe that it is necessary for the understanding of Plato's
sociology to consider how the difference between
natural and
normative laws developed. I shall first distinguish the
starting
point and the last step of the development, and later three
intermediate steps, which all play a part in Plato's theory.
The starting point can be described as a naive monism. It may
be said to be characteristic of the ' closed society '. The last
step, which I describe as critical dualism (or critical conventional-
ism), is characteristic of the ' open society '. The fact that there
are still many who try to avoid making this step may be taken
as an indication that we are still in the midst of the transition
from the closed to the open society. (With all this,
The starting point which I have called 'naive monism' is the stage at which the distinction between natural and normative laws is not yet made. Unpleasant experiences are the means by which man learns to adjust himself to his environment. No distinction is made between sanctions imposed by other men, if a normative taboo is broken, and unpleasant experiences suffered in the natural environment. Within this stage, we may further distinguish between two possibilities. The one can be described as a naive naturalism. At this stage regularities, whether natural or conventional, are felt to be beyond the possibility of any alteration whatever. But I believe that this stage is only an abstract possibility, which we probably never realized. More important is a stage which we can describe as a naive conventionalism, at which both natural and normative regularities are experienced as expressions of, and as dependent upon, the decisions of man-like gods or demons. At this stage even the natural laws, under certain exceptional circumstances, seem to be open to modifications, an^ with the help of magical practices man may sometimes influence them; and natural regularities appear to be upheld by sanctions, as if they were normative. This point is well illustrated by Heraclitus' saying: 'The sun will not outstep the measure of his path; but if he does, then the goddesses of Fate? the handmaids of Justice, will know how
to find him.' 2

The breakdown of magic tribalism is closely connected with

CHAPTER 5 I NATURE AND CONVENTION 51

the realization that taboos are different in various tribes, that they are imposed and enforced by man, and that they may be broken without unpleasant repercussions if one can only escape the sanctions imposed by one's fellow-men. This realization is quickened when it is observed that laws are altered and made by human lawgivers. I think not only of such lawgivers as Solon, but also of the laws which were made and enforced by the common people of democratic cities. These experiences may lead to a conscious differentiation between the man-enforced normative laws or conventions, and the natural regularities which are beyond his power. When this differentiation is clearly understood, then we can describe the position reached as a critical dualism, or critical conventionalism. In the development of Greek philosophy this dualism of facts and norms announces itself in terms of the opposition between nature and convention. 3

In spite of the fact that this position was reached a long time ago by the Sophist Protagoras, an older contemporary of Socrates, it is still so little understood that it seems necessary to explain it in some detail. First, we must not think that critical dualism
implies a theory of the historical origin of norms. It has nothing
to do with the historical assertion that norms in the
first place
were consciously made or introduced by man, instead of having
been found by him to be simply there (whenever he was first
able to find anything of this kind). It therefore has nothing to
do with the assertion that norms originate with man, and not
with God, nor does it underrate the importance of
normative
laws. Least of all has it anything to do with the assertion that
norms, since they are conventional, i.e. man-made, are therefore
' merely arbitrary '. Critical dualism merely asserts
that norms
and normative laws can be made and changed by man, more
especially by a decision or convention to observe them or to
alter them, and that it is therefore man who is morally
responsible
for them ; not perhaps for the norms which he finds to exist
in society when he first begins to reflect upon them, but for the
norms which he is prepared to tolerate once he has found out
that he can do something to alter them. Norms are man-
made
in the sense that we must blame nobody but ourselves
for them ;
neither nature, nor God. It is our business to improve
them
as much as we can. This last remark implies that by
describing
norms as conventional, I do not mean that they must be
arbitrary, or that one set of normative laws will do
just as well

52 PLATO 5 S SOCIOLOGY

as another. By saying that some systems of laws can be improved,
that some laws may be better than others, I rather imply that we can compare the existing normative laws (or social institutions) with some standard norms which we have decided are worthy to be realized. But even these standards are of our making in the sense that our decision in favour of them is our own decision, and that we alone carry the responsibility for adopting them. The standards are not to be found in nature. Nature consists of facts and of regularities, and is in itself neither moral nor immoral. It is we who impose our standards upon nature, and who introduce in this way morals into the natural world, in spite of the fact that we are part of this world. We are products of nature, but nature has made us together with our power of altering the world, of foreseeing and of planning for the future, and of making far-reaching decisions for which we are morally responsible. Yet responsibility, decisions, enter the world of nature only with us.

It is important for the understanding of this attitude to realize that these decisions can never be derived from facts (or statements of facts), although they pertain to facts. The decision, for instance, to oppose slavery, does not depend upon the fact that all men are born free and equal, and that no man is born in chains. For even if all men were born free, some might perhaps try to put them in chains. And even if they were born in chains, many of us might demand the removal of these chains. In this way, practically all facts of social life permit
many different decisions; for instance, that we leave things as they are, or that we alter them.

Critical dualism thus emphasizes the impossibility of reducing decisions or norms to facts; it can therefore be described as a dualism of facts and decisions. But this dualism seems to be open to attack. Decisions are facts, it may be said. If we decide to adopt a certain norm, then this decision is itself a psychological or sociological fact, and it would be absurd to say that there is nothing in common between such facts and other facts. Since it cannot be doubted that our decisions about norms, i.e. the norms we adopt, clearly depend upon certain psychological facts, such as the influence of our upbringing, it seems to be absurd to postulate a dualism of facts and decisions, or to say that decisions cannot be derived from facts. This objection, I believe, must be analysed and dispelled before we can say that we understand critical dualism.

CHAPTER 5 : NATURE AND CONVENTION 53

We can speak of 'decisions' in two different senses. In order to make these two senses clear, I may point out an analogous situation, in the field of descriptive statement. Let us consider the statement: 'Napoleon died on St. Helena'. It will be useful to distinguish this statement from the fact which it describes. Now a historian, say Mr. A, when writing the biography of Napoleon, may make the statement mentioned.
In doing so, he is describing a fact. But there is also a second fact, which is very different from that, namely the fact that he made the statement; and another historian, Mr. B, when writing the biography of Mr. A, may describe this second fact by saying: ‘Mr. A stated that Napoleon died on St. Helena’.

The second fact described in this way, happens to be itself a description. But it is a description in a sense of the word that must be distinguished from the sense in which we called the statement ‘Napoleon died on St. Helena’ a description. The making of a description, of a statement, is a sociological or psychological fact. But the description made is to be distinguished from the fact that it has been made. It cannot even be derived from this fact; for that would mean that we can deduce ‘Napoleon died on St. Helena’, from ‘Mr. A stated that Napoleon died on St. Helena’, which is obviously not possible.

In the field of decisions, the situation is analogous. The making of a decision, the adoption of a standard, is a fact. But the norm which has been adopted, is not. That most people agree with the norm ‘Thou shalt not steal’ is a sociological fact. But the norm ‘Thou shalt not steal’ is not a fact; and it can never be inferred from sentences describing facts. This will be seen most clearly when we remember that there are always various and even opposite decisions possible with respect to a certain relevant fact. For instance, in face of the sociological fact that most people adopt the norm ‘Thou shalt not steal’,
it is still possible to decide to adopt either this norm, or its opposite; and it is possible to encourage those who have adopted the norm to hold fast to it, or to discourage them, and to persuade them to adopt another norm. It is impossible to derive a sentence stating a norm or a decision from a sentence stating a fact; this is only another way of saying that it is impossible to derive norms or decisions from facts. 6

The statement that norms are man-made (in the sense that the responsibility for them is entirely ours) has often been misunderstood. Nearly all misunderstandings can be traced back to one fundamental misapprehension, namely, to the belief that 'convention' implies 'arbitrariness'; that if we are free to choose any system of norms we like, then one system is just as good as any other. It must, of course, be admitted that the view that norms are conventional or artificial indicates that there will be a certain element of arbitrariness involved, i.e. that there may be different systems of norms between which there is not much to choose (a fact that has been duly emphasized by Protagoras). But artificiality by no means implies full arbitrariness. Mathematical calculi, for instance, or symphonies, or plays, are highly artificial, yet it does not follow that one calculus or symphony or play is just as good as any other. Man has created
new worlds of music, of poetry, of science, and the
most
important of these is the world of the moral demands
for equality,
for freedom, and for helping the weak. When
comparing the
field of morals with the field of music or of
mathematics, I do
not wish to imply that these similarities reach very
far. There
is, more especially, a great difference between moral
decisions
and decisions in the field of art. Many moral decisions
involve
the life and death of other men. Decisions in the field
of art
are much less urgent and important. It is therefore
most
misleading to say that a man decides against slavery as
he may
decide against certain forms of music and literature,
and that
moral decisions are purely matters of taste. Nor are
they merely
decisions about how to make the world more beautiful,
or about
other luxuries of this kind; they are decisions of
much greater
urgency. (With all this, cp. also chapter 9.) Our
comparison
is only intended to show that the view that moral
decisions rest
with us does not imply that they are entirely
arbitrary.

The view that norms are man-made is also, strangely
enough,
contested by some who see in this attitude an attack on
religion.
It must be admitted, of course, that this view is an
attack on
certain forms of religion, namely, on the religion of
blind
authority, on magic and tafyooism. But I do not think
that it
is in any way opposed to a religion built upon the idea
of personal
responsibility and freedom of conscience. I have in
mind, of
course, especially Christianity, at least as it is usually interpreted in democratic countries; Christianity which, as against all tabooism, preaches, 'Ye have heard that it was said by them of old time. . . But I say unto you . .' ; opposing in every case the voice of conscience to mere formal obedience and the fulfilment of the law.

CHAPTER 5 : NATURE AND CONVENTION 55

I would not admit that to think of ethical laws as being man-made in this sense is incompatible with the religious view that they are given to us by God. Historically, all ethics undoubtedly begins with religion; but I do not now deal with historical questions. I do not ask who was the first ethical lawgiver. I only maintain that it is we, and we alone, who are responsible for adopting or rejecting some suggested moral laws; it is we who must distinguish between the true prophets and the false prophets. All kinds of norms have been claimed to be God-given. If you accept the Christian ethics of equality and toleration and freedom of conscience only because of its claim to rest upon divine authority, then you build on a weak basis; for it has been only too often claimed that inequality is willed by God, and that we must not be tolerant with unbelievers. If, however, you accept the Christian ethics not because you are commanded to do so but because of your conviction that it is the right decision to take, then it is you who
have decided.
My insistence that we make the decisions and carry the responsibility must not be taken to imply that we cannot, or must not, be helped by faith, and inspired by tradition, or by great examples. Nor does it imply that the creation of moral decisions is merely a *natural* process, i.e. of the order of physico-chemical processes. In fact, Protagoras, the first critical dualist, taught that nature does not know norms, and that the introduction of norms is due to man, and the most important of human achievements. He thus held the institutions and conventions were what raised men above the brutes', as Burnet puts it. But in spite of his insistence that man creates norms, that it is man who is the measure of all things, he believed that man could achieve the creation of norms only with supernatural help. Norms, he taught, are superimposed upon the original or natural state of affairs by man, but with the help of Zeus. The way in which the first clear statement of critical dualism makes room for a religious interpretation of our sense of responsibility shows how little critical dualism is opposed to a religious attitude. A similar approach can be discerned, I believe, in the historical Socrates (see chapter 10) who felt compelled, by his conscience as well as by his religious beliefs, to question all authority, and who searched for the norms in whose justice he could trust. The doctrine of the autonomy of ethics is independent of the problem of religion, but compatible with, or perhaps even
necessary for, any religion which respects individual conscience.

56 PLATO'S SOCIOLOGY

So much concerning the dualism of facts and decisions, or the doctrine of the autonomy of ethics, first advocated by Protagoras and Socrates. It is, I believe, indispensable for a reasonable understanding of our social environment. But of course this does not mean that all social laws, i.e. all regularities of our social life, are normative and man imposed. On the contrary, there are important natural laws of social life also. For these, the term sociological laws seems appropriate. It is just the fact that in social life we meet with both kinds of laws, natural and normative, which makes it so important to distinguish them clearly.

By speaking of sociological laws or natural laws of social life, I do not think so much of the broad developmental laws in which historicists, Plato for instance, are interested, although if there are any such developmental regularities, their formulations would certainly fall under the category of sociological laws. Nor do I think so much of the laws of human nature, i.e. of psychological and socio-psychological regularities of human behaviour. I have in mind, rather, such laws as are formulated by modern economic theories, for instance, the theory of international trade, or the theory of the trade cycle. But there are
other important sociological laws, connected with the functioning of social institutions. (Cp. chapters 2 and 9.) These laws play a role in our social life corresponding to the role played in mechanical engineering by, say, the principle of the lever.

For institutions, like levers, are needed if we want to achieve anything which goes beyond the power of our muscles. Like machines, institutions multiply our power for good and evil. Like machines, they need intelligent supervision by someone who understands their way of functioning and, most of all, their purpose, since we cannot build them so that they work entirely automatically. Furthermore, their construction needs some knowledge of social regularities which impose limitations upon what can be achieved by institutions 9. (These limitations are somewhat analogous, for instance, to the law of conservation of energy, which amounts to the statement that we cannot build a perpetual motion machine.) But fundamentally, institutions are always made by establishing the observance of certain norms, designed with a certain aim in mind. (Even mechanical engines are made, as it were, not only of iron, but by combining iron and norms; i.e. by transforming physical things, but according to certain normative rules, namely their

CHAPTER 5 I NATURE AND CONVENTION 57

plan or design.) In institutions, normative laws and socio-
logical, i.e. natural laws are closely interwoven, and it is therefore impossible to understand the functioning of institutions without being able to distinguish between these two.

As indicated before, there are many intermediate steps in the development from a naive or magical monism to a critical dualism which clearly realizes the distinction between norms and natural laws. Most of these intermediate positions arise from the misapprehension that if a norm is conventional or artificial, it must be wholly arbitrary. To understand Plato's position, which combines features of them all, it is necessary to make a survey of the three most important of these intermediate positions. They are (i) biological naturalism, (2) ethical or juridical positivism, and (3) psychological or spiritual naturalism. It is interesting that each of these positions has been used for defending quite opposite ethical views; more especially, for defending the worship of power, and for defending the rights of the weak.

(i) Biological naturalism, or more precisely, the biological form of ethical naturalism, is the theory that in spite of the fact that morals and the laws of states are arbitrary, there are some eternal unchanging laws of nature from which we can derive norms. Food habits, i.e. the number of meals, and the kind of food taken, are an example of the arbitrariness of conventions, the biological naturalist may argue; yet there are undoubtedly certain natural laws in this field. For instance, a man
will die
if he takes either insufficient or too much food. Thus it seems that just as there are realities behind appearances, so behind our arbitrary conventions there are some unchanging natural laws and especially the laws of biology.

Biological naturalism has been used to defend equalitarianism as well as the anti-equalitarian doctrine of the rule of the strong. One of the first to put forward this naturalism was the poet Pindar, who used it to support the theory that the strong should rule. He claimed that it is a law, valid throughout nature, that the stronger does with the weaker whatever he likes. Thus laws which protect the weak are not merely arbitrary but artificial distortions of the true natural law that the strong should be free and the weak should be his slave. The view is discussed a good deal by Plato; it is attacked in the Gorgias, a dialogue which is still much influenced by Socrates; in the Republic, it is put in the mouth of Thrasymachus, and identified with ethical O.S.I.E. VOL. j c

individualism (see the next chapter); in the Laws, Plato is less antagonistic to Pindar's view; but he still contrasts it with the rule of the wisest, which, he says, is a better principle, and just as much in accordance with nature (see also the quotation later in this chapter).
The first to put forward a humanitarian or equalitarian version of biological naturalism was the Sophist Antiphon. To him is due also the identification of nature with truth, and of convention with opinion (or 'delusive opinion' II ). Antiphon is a radical naturalist. He believes that most norms are not merely arbitrary but directly contrary to nature. Norms, he says, are imposed from outside, while the rules of nature are inevitable. It is disadvantageous and even dangerous to break man-imposed norms if the breach is observed by those who impose them; but there is no inner necessity attached to them, and nobody need to be ashamed of breaking them; shame and punishment are only sanctions arbitrarily imposed from outside.

On this criticism of conventional morals, Antiphon bases a utilitarian ethics. * Of the actions here mentioned, one would find many to be contrary to nature. For they involve more suffering where there should be less, and less pleasure where there could be more, and injury where it is unnecessary.' 12 At the same time, he taught the need for self-control. His equalitarianism he formulates as follows: 'The nobly born we revere and adore; but not the lowly born. These are coarse habits. Our natural gifts are the same for all, on all points, whether we are now Greeks or barbarians... We all breathe the air through our mouth and nostrils.'

A similar equalitarianism was voiced by the Sophist Hippias, whom Plato represents as addressing his audience: * Gentlemen,
I believe that we are all kinsmen and friends and fellow-citizens; if not by conventional law, then by nature. For by nature, likeness is an expression of kinship; but the law, the tyrant of mankind, compels us to do much that is against nature. 13
This spirit was bound up with the Athenian movement against slavery (mentioned in chapter 4) to which Euripides gave expression: *The name alone brings shame upon the slave who can be excellent in every way and truly equal to the free born man.*
Elsewhere, he says: *Man's law of nature is equality.* And Alcidamas, a disciple of Gorgias and a contemporary of Plato, wrote: *God has made all men free; no man is a slave by nature.* 5 Similar views are also expressed by Lycophron, another

CHAPTER 5: NATURE AND CONVENTION 59

member of Gorgias 5 school: *Nobility of birth is hollow. Its prerogatives are unfounded and its splendour is based upon a name/*

Against this great humanitarian movement, the movement of the *Great Generation*, as I shall call it later (chapter 10), Plato, and his disciple Aristotle, advanced the theory of the biological and moral inequality of man. Greeks and barbarians are unequal by nature; the opposition between them corresponds to that between natural masters and natural slaves. The natural inequality of men is one of the reasons for their living together, for their natural gifts are complementary.
Social life begins with natural inequality, and it must continue upon that foundation. I shall discuss these doctrines later in more detail. At present, they may serve to show how biological naturalism can be used to support the most divergent ethical doctrines. In the light of our previous analysis of the impossibility of basing norms upon facts this result is not unexpected.

Such considerations, however, are perhaps not sufficient to defeat a theory as popular as biological naturalism; I therefore proffer two more direct criticisms. First of all, it must be admitted that certain forms of behaviour may be described as more "natural" than other forms; for instance, going naked or eating only raw food; and some people think that this in itself justifies the choice of these forms. But in this sense it is also most unnatural to be interested in art, or science, or even in arguments in favour of naturalism. Thus to choose conformity with "nature" as a supreme standard leads ultimately to consequences which few will be prepared to face; it does not lead to a more natural form of civilization, but to beastliness\. The second criticism is more important. The biological naturalist assumes that he can derive his norms from the natural laws which determine the conditions of health, etc., if he does not naively believe that we need adopt no norms whatever but simply live according to the "laws of nature". He overlooks the fact that he makes a choice, a decision; that it is possible
that some other people cherish certain things more than their health (for instance, the many who have consciously risked their lives, perhaps for medical research). And he is therefore mistaken if he believes that he has not made a conventional decision, or has derived his norms from biological laws.

(2) Ethical positivism shares with the biological form of ethical naturalism the belief that we must try to reduce norms to facts. But the facts are this time sociological facts, namely, the actual existing norms. Positivism maintains that there are no other norms but the laws which have actually been set up (or 'posited') and which have therefore a positive existence. Other standards are considered as unreal imaginations. The existing laws are the only possible standards of goodness: what is, is good. (Might is right.) According to some forms of this theory, it is a gross misunderstanding to believe that the individual can judge the norms of society; rather, it is society which provides the code by which the individual must be judged.

Historically, ethical (or moral, or juridical) positivism has usually been conservative, or even authoritarian; and it has often invoked the authority of God. Its arguments depend, I believe, upon the arbitrariness of norms. We must believe in existing norms, it claims, because there are no better
norms which we may find for ourselves. In reply to this it might be asked: What about this norm c We must believe etc.'? If this is only an existing norm, then it does not count as an argument in favour of these norms; but if it is an appeal to our insight, then it admits that we can, after all, find norms ourselves. And if we are told to accept norms on authority because we cannot judge them, then neither can we judge whether the claims of the authority are justified, or whether we may not follow a false prophet. And if it is held that there are no false prophets because laws are arbitrary anyhow, so that the main thing is to have some laws, then we may ask ourselves why it should be so important to have laws at all; for if there are no further standards, why then should we not choose to have no laws? (These remarks may perhaps indicate the reasons for my belief that authoritarian or conservative principles are usually an expression of ethical nihilism; that is to say, of an extreme scepticism, of a distrust of man, and of his possibilities.)

While the theory of natural rights has, in the course of history, often been proffered in support of equalitarian and humanitarian ideas, the positivist school was usually in the opposite camp. But this is not much more than an accident; as has been shown, ethical naturalism may be used with very different intentions. (It has recently been used for confusing
the whole issue by advertising certain reactionary, and allegedly
* natural ' rights as * natural laws '). Conversely, there are also

CHAPTER 5 : NATURE AND CONVENTION 61

humanitarian and progressive positivists. For if all norms are
arbitrary, why not be tolerant? This is a typical attempt to
justify a humanitarian attitude along positivist lines.

(3) Psychological or spiritual naturalism is in a way a com-
bination of the two previous views, and it can best be explained
by means of an argument against the one-sidedness of these
views. The ethical positivist is right, this argument runs, if he
emphasizes that all norms are conventional, i.e. a product of
man, and of human society; but he overlooks the fact that
they are therefore an expression of the psychological or spiritual
nature of man, and of the nature of human society. The biological naturalist is right in assuming that there are certain
natural aims or ends, from which we can derive natural norms;
but he overlooks the fact that our natural aims are not neces-
sarily such, aims as health, pleasure, or food, shelter or propaga-
tion. Human nature is such that man, or at least some men,
do not want to live by bread alone, that they seek higher aims,
spiritual aims. We may thus derive man's true natural aims
from his own true nature, which is spiritual, and social. And
we may, further, derive the natural norms of life from his
natural ends.
This plausible position was, I believe, first formulated by Plato, who was here under the influence of the Socratic doctrine of the soul, i.e. of Socrates' teaching, that the spirit matters more than the flesh. Its appeal to our sentiments is undoubtedly very much stronger than that of the other two positions. It can however be combined, like these, with any ethical decision; with a humanitarian attitude as well as with the worship of power. For we can, for instance, decide to treat all men as participating in this spiritual human nature; or we can insist, like Heraclitus, that the many fill their bellies like the beasts', and are therefore of an inferior nature, and that only a few elect ones are worthy of the spiritual community of men. Accordingly, spiritual naturalism has been much used, and especially by Plato, to justify the natural prerogatives of the 'noble' or 'elect' or 'wise' or of the 'natural leader'. (Plato's attitude is discussed in the following chapters.) On the other hand, it has been used by Christian and other humanitarian forms of ethics, for instance by Paine and by Kant, to demand the recognition of the 'natural rights' of every human individual. In fact, it is clear that spiritual naturalism can be used to defend anything, and especially any

6a PLATO'S SOCIOLOGY

* positive ', i.e. existing, norms. For it can always
be argued
that these norms would not be in force if they did not express
some traits of human nature. In this way, spiritual naturalism
can, in practical problems, become one with positivism, in spite
of their traditional opposition. (In fact, this form of naturalism
is so wide and so vague that it may be used to defend anything.
There is nothing that has ever occurred to man which could
not be claimed to be c natural'; for if it were not in his nature,
how could it have occurred to him?)

Looking back at this brief survey, we perhaps may discern
two main tendencies which stand in the way of adopting a
critical dualism. The first is a general tendency towards
monism 17, that is to say, towards the reduction of norms to
facts. The second lies deeper, and it possibly forms the back-
ground of the first. It is based upon our fear of admitting to
ourselves that the responsibility for our ethical decisions is
entirely ours and can be shifted on to nobody else; neither to
God, nor to nature, nor to society, nor to history. All these
ethical theories attempt to find somebody, or perhaps some
argument, to take the .burden from us 18. But we cannot shirk
this responsibility. Whatever authority we may accept, it is we
who accept it. We only deceive ourselves if we do not realize
this simple point.

We now turn to a more detailed analysis of Plato's naturalism
and its relation to his historicism. Plato, of course, does not
always use the term 'nature' in the same sense. The most important meaning which he attaches to it is, I believe, practically identical with that which he attaches to the term 'essence'. This way of using the term 'nature' still survives among essentialists even in our day; they still speak, for instance, of the nature of mathematics, or of the nature of inductive inference, or of the 'nature of happiness and misery' 19. When used by Plato in this way, 'nature' means nearly the same as 'Form' or 'Idea'; for the Form or Idea of a thing, as shown above, is also its essence. The main difference between natures and Forms or Ideas seems to be this. The Form or Idea of a sensible thing is, as we have seen, not in that thing, but separated from it; it is its forefather, its primogenitor; but this Form or father passes something on to the sensible things which are its offspring or race, namely, their nature. The 'nature' is thus the inborn or original quality of a thing, and in so far, its inherent essence; it is the original power or disposition of a thing, and it deter-

CHAPTER 5: NATURE AND CONVENTION 63

mines those of its properties which are the basis of its resemblance to, or of its innate participation in, the Form or Idea.

'Natural' is, accordingly, what is innate or original or divine in a thing, while 'artificial' is that which has been later changed by man or added or imposed by him, through
external compulsion. Plato frequently insists that all products of human life are only copies of 'natural' sensible things. But since these in turn are only copies of the divine Ideas, the products of art are only copies of copies, twice removed from reality, and therefore less good, less real, and less true than even the (natural) things in flux. . . We see from this that Plato agrees with Antiphon in at least one point, namely in assuming that the opposition between nature and convention or art corresponds to that between truth and falsehood, between reality and appearance, between primary or original and secondary or man-made things, and to that between the objects of rational knowledge and those of delusive opinion. The opposition corresponds also, according to Plato, to that between 'the offspring of divine workmanship' or the products of divine art, and *what man makes out of them, i.e. the products of human art'. All those things whose intrinsic value Plato wishes to emphasize he therefore claims to be natural as opposed to artificial. Thus he insists in the Laws that the soul has to be considered prior to all material things, and that it must therefore be said to exist by nature: * Nearly everybody . . is ignorant of the power of the soul, and especially of her origin. They do not know that she is among the first of things, and prior to all bodies. . . In using the word "nature" one wants to describe the things that were created first; but if it turns out that it is the soul which is prior to other things (and
not, perhaps,
fire or air), . . then the soul, beyond all others, may be asserted
to exist by nature, in the truest sense of the word. 5
23 (Plato here reaffirms his old theory that the soul is more closely akin
to the Forms or Ideas than the body; a theory which is also
the basis of his doctrine of immortality).

But Plato not only teaches that the soul is prior to other things and therefore exists by nature *; he uses the term
c nature *, if applied to man, frequently also as a name for spiritual powers or gifts or natural talents, so that we can say that a man's nature is much the same as his soul; it is the divine principle by which he participates in the Form or Idea, in the divine primogenitor of his race. And the term

64 PLATO'S SOCIOLOGY

c race J, again, is frequently used in a very similar sense. Since a * race ' is united by being the offspring of the same primo-
genitor, it must also be united by a common nature. Thus the terms ' nature ' and ' race ' are frequently used by Plato as synonyms, for instance, when he speaks of the ' race of philosophers ' and of those who have ' philosophic natures '; so that both these terms are closely akin to the terms * essence ' and ' soul '.

Plato's theory of ' nature ' opens another approach to his historicist methodology. Since it seems to be the task
of science
in general to examine the true nature of its objects,
it is the
task of a social or political science to examine the
nature of
human society, and of the state. But the nature of a
thing,
according to Plato, is its origin; or at least it is
determined
by its origin. Thus the method of any science will be the
investigation of the origin of things (of their *
causes'). This
principle, when applied to the science of society and
of politics,
leads to the demand that the origin of society and of
the state
must be examined. History therefore is not studied for
its own
sake but serves as the method of the social sciences.
This is the
historicist methodology.

What is the nature of human society, of the state? Ac-
coning to historicist methods, this fundamental question
of sociology
must be reformulated in this way: what is the origin
of society
and of the state? The reply given by Plato in the
Republic as
well as in the Laws * 4, agrees with the position
described above
as spiritual naturalism. The origin of society is a
convention,
a social contract. But it is not only that; it is, rather,
a natural
convention, i.e. a convention which is based upon human
nature, and more precisely, upon the social nature of
man.

This social nature of man has its origin in the
imperfection
of the human individual. In opposition to Socrates 25, Plato
teaches that the human individual cannot be self-
sufficient,
owing to the limitations inherent in human nature.
Although
Plato insists that there are very different degrees of human perfection, it turns out that even the very few comparatively perfect men still depend upon others (who are less perfect); if for nothing else, then for having the dirty work, the manual work, done by them \[2G\]. In this way, even the ' rare and uncommon natures \ who approach perfection depend upon society, upon the state. They can reach perfection only through the state and in the state; the perfect state must offer them the

CHAPTER 5 : NATURE AND CONVENTION 65

proper c social habitat ', without which they must grow corrupt and degenerate. The state therefore must be placed higher than the individual since only the state can be autarch, self-sufficient, perfect, and able to make good the necessary imperfection of the individual.

Society and the individual are thus interdependent. The one owes its existence to the other. Society owes its existence to human nature, and especially to its lack of self-sufficiency; and the individual owes his existence to society, since he is not self-sufficient. But within this relationship of interdependence, the superiority of the state over the individual manifests itself in various ways; for instance, in the fact that the seed of the decay and disunion of a perfect state does not spring up in the state itself, but rather in its individuals; it is rooted in the imperfection of the human soul, of human nature; or more
precisely, in the fact that the race of men is liable to degenerate.
To this point, the origin of political decay, and its dependence
upon the degeneration of human nature, I shall return presently;
but I wish first to make a few comments on some of the charac-
teristics of Plato's sociology, especially upon his version of the
theory of the social contract, and upon his view of the state
as a super-individual, i.e. his version of the biological or organic
theory of the state.

Whether Protagoras proffered a theory that laws originate
with a social contract, or whether Lycophron (whose theory
will be discussed in the next chapter) was the first to do so, is
not certain. In any case, the idea is closely related to Prota-
goras' conventionalism. The fact that Plato consciously com-
bined some conventionalist ideas, and even a version of the
contract theory, with his naturalism, is in itself an indication
that conventionalism in its original form did not maintain that
laws are wholly arbitrary; and Plato's remarks on Protagoras
confirm this 27. How conscious Plato was of a conventionalist
element in his version of naturalism* can be seen from a passage
in the Laws. Plato there gives a list of the various principles
upon which political authority might be based, mentioning
Pindar's biological naturalism (see above), i.e. 'the principle
that the stronger shall rule and the weaker be ruled', which
he describes as a principle ' according to nature, as the Theban
poet Pindar once stated '. Plato contracts this
principle with another which he recommends by showing that it combines conventionalism with naturalism: c But there is also a . . claim

66 PLATO'S SOCIOLOGY

which is the greatest principle of all, namely, that the wise shall command and lead, and that the ignorant shall follow; and this, O Pindar, wisest of poets, is surely not contrary to nature, but according to nature; for what it demands is not external compulsion but the truly natural sovereignty of a law which is based upon mutual consent.' 28

In the Republic we find elements of the conventionalist contract theory in a similar way combined with elements of naturalism. ' The city originates ', we hear there, ' because we are not self-sufficient; . . or is there another origin of settlement in cities? . . Men gather into one settlement many . . helpers, since they need many things. . . And when they share their goods with one another, the one giving, the other partaking, does not every one expect in this way to further his own interest? ' 29 Thus the inhabitants gather in order that each may further his own interest; which is an element of the contract theory. But behind this stands the fact that they are not self-sufficient, a fact of human nature; which is an element of naturalism. And this element is developed further. * By nature, no two of us are exactly alike. Each has his peculiar nature,
some being fit for one kind of work and some for another...
Is it better that a man should work in many crafts or that he should work in one only?... Surely, more will be produced and better and more easily if each man works in one occupation only, according to his natural gifts.'

In this way, the economic principle of the division of labour is introduced (reminding us of the affinity between Plato's historicism and the materialist interpretation of history). But this principle is based here upon an element of biological naturalism, namely, upon the natural inequality of men. At first, this idea is introduced inconspicuously and, as it were, rather innocently. But we shall see in the next chapter that it has far-reaching consequences; indeed, the only really important division of labour turns out to be that between rulers and ruled, claimed to be based upon the natural inequality of masters and slaves, of wise and ignorant.

We have seen that there is a considerable element of conventionalism as well as of biological naturalism in Plato's position; an observation which is not surprising when we consider that this position is, on the whole, that of spiritual naturalism which, because of its vagueness, easily allows for all such combinations. This spiritual version of naturalism is perhaps best

CHAPTER 5 : NATURE AND CONVENTION 6
formulated in the Laws. * Men say ', says Plato, c that the

greatest and most beautiful things are natural . . and
the lesser
things artificial.' So far he agrees ; but he then
attacks the
materialists who say ' that fire and water, and earth
and air,
all exist by nature . . and that all normative laws are
altogether
unnatural and artificial and based upon superstitions
which are
not true.' Against this view, he shows first, that it
is not bodies
nor elements, but the soul which truly * exists by
nature ' 30
(I have quoted this passage above) ; and from this he
concludes
that order, and law, must also be by nature, since they
spring
from the soul : * If the soul is prior to the body, then things
dependent upon the soul ' (i.e. spiritual matters) c
are also prior
to those dependent upon body . . . And the soul orders
and
directs all things.' This supplies the theoretical
background for
the doctrine that ' laws and purposeful institutions
exist by
nature, and not by anything lower than nature, since
they are
born of reason and true thought.' This is a clear
statement of
spiritual naturalism ; and it is combined as well with
positivist
beliefs of a conservative kind : c Thoughtful and
prudent legisla-
tion will find a most powerful help because the laws
will remain
unchanged once they have been laid down in writing.'

From all this it can be seen that arguments derived
from
Plato's spiritual naturalism are quite incapable of
helping to
answer any question which may arise concerning the
'just' or
* natural ' character of any particular law. Spiritual
naturalism is much too vague to be applied to any practical problem. It cannot do much beyond providing some general arguments in favour of conservativism. In practice, everything is left to the wisdom of the great lawgiver (a godlike philosopher, whose picture, especially in the Laws, is undoubtedly a self-portrait; see also chapter 8). As opposed to his spiritual naturalism, however, Plato's theory of the interdependence of society and the individual furnishes more concrete results; and so does his anti-equalitarian biological naturalism.

It has been indicated above that because of its self-sufficiency, the ideal state appears to Plato as the perfect individual, and the individual citizen, accordingly, as an imperfect copy of the state. This view which makes of the state a kind of super-organism or Leviathan is the beginning of the so-called organic or biological theory of the state. The principle of this theory will be criticized later. Here I wish first to draw attention to the fact that Plato does not defend the theory, and indeed hardly formulates it explicitly. But it is clearly enough implied; in fact, the fundamental analogy between the state and the human individual is one of the standard topics of the Republic. It is worth mentioning, in this connection, that the analogy serves as a help in the analysis of the individual
rather than of the state. One could perhaps defend the view that Plato proffers not so much a biological theory of the state as a political theory of the human individual 32. This view, I think, is in full accord with his doctrine that the individual is lower than the state and is a kind of imperfect copy of it. In the very place in which Plato introduces his fundamental analogy it is used in this way, that is to say, as a method of explaining and elucidating the individual. The city, it is said, is greater than the individual, and therefore easier to examine. Plato gives this as his reason for suggesting that 'we should begin our inquiry' (namely, into the nature of justice) * in the city, and continue it afterwards in the individual, always watching for points of similarity. . . May we not expect in this way more easily to discern what we are looking for? *

From this way of introducing it we can see that Plato takes the existence of his fundamental analogy for granted. This fact, I believe, is an expression of his longing for a unified and harmonious, for an *organic* state, for a society of a more primitive kind. (See chapter 10.) The state must be small, he says, and may grow only as long as its increase does not endanger its unity. The whole city must by its nature become one, and not many. 33 Plato thus emphasizes the oneness 'or individuality of his city. But he also emphasizes the *manyness ' of the human individual. In his analysis of the individual soul,
and of its division into three parts, reason, energy, and animal
instincts, corresponding to the three classes of his state, the
guardians, warriors, and workers (who still continue to 'fill
their bellies like the beasts ', as Heraclitus had said), Plato goes
so far as to oppose these parts to one another as if they were
c distinct and conflicting persons ' 34 . c We are thus
told ', says
Grote, ' that though man is apparently One, he is in
reality
Many . . though the perfect Commonwealth is apparently
Many, it is in reality One.' It is clear that this
corresponds
to the Ideal character of the state of which the
individual is
a kind of imperfect t ,copy. Such an emphasis upon
oneness
and wholeness of the state may be described as * holism
'.
Plato's holism, I believe, is closely related to the
tribal collectivism

CHAPTER 5 I NATURE AND CONVENTION 69

mentioned in earlier chapters. Plato was longing for
the lost
unity of tribal life. A life of change, in the midst of a
social
revolution, appeared to him unreal. Only a stable
whole, the
permanent collective, has reality, not the passing
individuals.
It is * natural ' for the individual to subserve the
whole, which
is no mere assembly of individuals, but a c natural ' unit of a
higher order.

Plato gives many excellent sociological descriptions of this
c natural ', i.e. tribal and collectivist, mode of
social life : * The
law ', he writes in the Republic, * is designed to
bring about the welfare of the state as a whole, fitting the citizens into one unit, by means of both persuasion and force. It makes them share mutually in any contribution which each is capable of rendering to the community. And it is actually the law which creates in the state the right type of men; not for the purpose of letting them loose, so that everybody can go his own way, but in order to utilize them all for welding the city together.' 35 That there is in this holism an emotional aestheticism, a longing for beauty, can be seen, for instance, from a remark in the Laws: 'Every artist . . executes the part for the sake of the whole, and not the whole for the sake of the part.' At the same place, we also find a truly classical formulation of political holism: 'You are created for the sake of the whole, and not the whole for the sake of you.' Within this whole, the different individuals, and groups of individuals, with their natural inequalities, must render their specific and very unequal services. All this would be sufficient for characterizing Plato's theory as a form of the organic theory of the state, even if he had not sometimes spoken of the state as an organism. But since he did this, there can be no doubt left that he must be described as an exponent, or rather, as the originator of this theory. His version of this theory may be characterized as a personalist or psychological one, since he describes the state not in a general way as similar to some organism or other, but as analogous to the human
individual, and more specifically to the human soul. Especially
the disease of the state, the dissolution of its unity, corresponds
to the disease of the human soul, of human nature. In fact,
the disease of the state is not only correlated with, but is directly
produced by the corruption of human nature, more especially,
of the members of the ruling class. Every single one of the
typical stages in the degeneration of the state is brought about
by a corresponding stage in the degeneration of the human

70 PLATO'S SOCIOLOGY

soul, of human nature, of the human race. And since this
moral degeneration is interpreted as based upon racial
degeneration, we might say that the biological element in Plato's
naturalism turns out, in the end, to have the most important
part in the foundation of his historicism. For the history of
the downfall of the first or perfect state is nothing but the
history of the biological degeneration of the race of men.

It was mentioned in the last chapter that the problem of the
beginning of change and decay is one of the major difficulties
of Plato's historicist theory of society. The first, the natural
and perfect city-state cannot be supposed to carry within itself
the germ of dissolution, * for a city which carries within itself
the germ of dissolution is for that very reason imperfect ' 36 .
Plato tries to get over the difficulty by laying the
blame on his
universally valid historical, biological, and perhaps
even cosmo-
logical, developmental law of degeneration, rather than
on the
particular constitution of the first or perfect city 37:

everything that has been generated must decay.' But this
general
theory does not provide a fully satisfactory solution,
for it does
not explain why even a sufficiently perfect state
cannot escape
the law of decay. And indeed, Plato hints that
historical decay
might have been avoided 38, had the rulers of the
first or natural
state been trained philosophers. But they were not.
They were
not trained (as he demands that the rulers of his
heavenly city
should be) in mathematics and dialectics; and in order
to
avoid degeneration, they would have needed to be
initiated into
the higher mysteries of eugenics, of the science of 'keeping pure
the race of the guardians', and of avoiding the
mixture of the
noble metals in their veins with the base metals of the
workers.
But these higher mysteries are difficult to reveal.
Plato dis-
tinguishes sharply, in the fields of mathematics,
acoustics, and
astronomy, between mere (delusive) opinion which is
tainted by
experience, and which cannot reach exactness, and is
altogether
on a low level, and pure rational knowledge, which is
free from
sensual experience and exact. This distinction he
applies also
to the field of eugenics. A merely empirical art of
breeding
cannot be precise, i.e. it cannot keep the race
perfectly pure.
This explains the downfall of the original city which
is so good,
i.e. so similar to its Form or Idea, that ' a city thus constituted can hardly be shaken '. ' But this ', Plato continues, ' is the way it dissolves ', and he proceeds to outline his theory of breeding, of the Number, and of the Fall of Man.

CHAPTER 5 I NATURE AND CONVENTION 71

All plants and animals, he tells us, must be bred according to definite periods of time, if barrenness and other forms of degeneration are to be avoided. Some knowledge of these periods, which are connected with the length of the life of the race, will be available to the rulers of the best state, and they will apply it to the breeding of the master race. It will not, however, be rational, but empirical; it will be ' calculation based on perception ' (cp. the next quotation). But as we know, experience can never be exact and reliable, since its objects are not the pure Forms or Ideas, but the world of things in flux; and since the guardians have no better knowledge, the breed cannot be kept pure, and racial degeneration must creep in. This is how Plato explains the matter: * Concerning your own race J (i.e. the race of men, as opposed to animals), * the rulers of the city whom you have trained may be wise enough; but since they are using only calculation aided by perception, they will not hit, accidentally, upon the way of getting either good offspring, or none at all. 5 39 Lacking a purely rational method, ' they will blunder, and some day they will beget
children in the wrong manner'. In what follows next, Plato hints, rather mysteriously, that there is now a way to avoid this through the discovery of a purely rational and mathematical science which possesses in the form of the mysterious 'Platonic Number' (which determines the True Period of the human race) the key to the master law of higher eugenics. But since the guardians of old times were ignorant of Pythagorean number-mysticism, and with it, of this higher knowledge of breeding, the otherwise perfect natural state could not escape decay. After partially revealing the secret of his Number, Plato continues: 'This... number is master over better or worse births; and whenever the guardians, ignorant (you must remember) of these matters, unite bride and bridegroom at the wrong time, the children will have neither good natures nor good luck. Even the best of them... will prove unworthy when succeeding to the power of their fathers; and as soon as they are guardians, they will not listen to us any more 'that is, in matters of musical and gymnastic education, and, as Plato especially emphasizes, in the supervision of breeding. Hence rulers will be appointed who are altogether unfit for their task as guardians; namely to watch, and to test, the metals in the races (which are Hesiod's races as well as yours), gold and silver and bronze and iron. So iron will mingle with...
silver and bronze with gold and from this mixture, variation will be born and absurd irregularity; and whenever these are born they will beget struggle and hostility. And this is how we must describe the ancestry or origin of disunion, wherever she arises.'

This is Plato's story of the Number and of the Fall of Man. It is the basis of his historicist sociology, especially of his fundamental law of social revolutions discussed in the last chapter 41. For racial degeneration explains the origin of disunion in the ruling class, and with it, the origin of all historical development. The internal disunion of human nature, the schism of the soul, leads to the schism of the ruling class. And as with Heraclitus, war, class war, is the father and promoter of all change, and of the history of man, which is nothing but the history of the breakdown of society. We see that Plato's idealist historicism ultimately rests not upon a spiritual, but upon a biological basis; it rests upon a kind of meta-biology 42 of the race of men. Plato was not only a naturalist who proffered a biological theory of the state, he was also the first to proffer a biological and racial theory of social dynamics, of political history. The Platonic Number ', says Adam 43, * is thus the setting in which Plato's "Philosophy of History " is framed.'

It is, I think, appropriate to conclude this sketch of Plato's descriptive sociology with a summary and an evaluation.
Plato succeeded in giving an amazingly true, though of course somewhat idealized, reconstruction of an early Greek tribal and collectivist society similar to that of Sparta. An analysis of the forces, especially the economic forces, which threaten the stability of such a society, enables him to describe the general policy as well as the social institutions which are necessary for arresting it. And he gives, furthermore, a rational reconstruction of the economic and historical development of the Greek city-states.

These achievements are impaired by his hatred of the society in which he was living, and by his romantic love for the old tribal form of social life. It is this attitude which led him to formulate an untenable law of historical development, namely, the law of universal degeneration or decay. And the same attitude is also responsible for the irrational, fantastic, and romantic elements of, his otherwise excellent analysis. On the other hand, it was just his personal interest and his partiality which sharpened his eye and so made his achievements possible.

CHAPTER 5 : NATURE AND CONVENTION 73

He derived his historicist theory from the fantastic philosophical doctrine that the changing visible world is only a decaying copy of an unchanging invisible world. But this ingenious attempt to combine a historicist pessimism with an ontological optimism
leads, when elaborated, to difficulties. These difficulties forced upon him the adoption of a biological naturalism, leading (together with c psychologism ' 44 , i.e. the theory that society depends on the * human nature ' of its members) to mysticism and superstition, culminating in a pseudo-rational mathematical theory of breeding. They even endangered the impressive unity of his theoretical edifice.

Looking back at this edifice, we may briefly consider its ground-plan 45 . This ground-plan, conceived by a great architect, exhibits a fundamental metaphysical dualism in Plato's thought. In the field of logic, this dualism presents itself as the opposition: between the universal and the particular. In the field of mathematical speculation, it presents itself as the opposition between the One and the Many. In the field of epistemology, it is the opposition between rational knowledge based on pure thought, and opinion based on particular experiences. In the field of ontology, it is the opposition between the one, original, invariable, and true, reality, and the many, varying, and delusive, appearances; between pure being and becoming, or more precisely, changing. In the field of cosmology, it is the opposition between that which generates and that which is generated, and which must decay. In ethics, it is the opposition between the good, i.e. that which preserves, and the evil, i.e. that which corrupts. In politics, it is the opposition between the one collective, the state, which may attain
perfection and
autarchy, and the many individuals, the particular men who
must remain imperfect and dependent, and whose particularity
is to be suppressed for the sake of the unity of the state (see the
next chapter). And this whole dualist philosophy originated,
as I believe, in the sociological domain, from the contrasts
between a stable society, and a society in the process of revolution.

PLATOS POLITICAL PROGRAMME

CHAPTER 6 : TOTALITARIAN JUSTICE

The analysis of Plato's sociology makes it easy to present
his political programme. His fundamental demands can be expressed in either of two formulae, the first corresponding to his
idealist theory of change and rest, the second to his naturalism.
The idealist formula is: Arrest all political change! Change is
evil, rest divine. All change can be arrested if the state is made
an exact copy of its original, i.e. of the Form or Idea of the city.
Should it be asked how this is practicable, we can reply with the
naturalist formula: Back to nature! Back to the original state
of our forefathers, the primitive state founded in accordance with
human nature, and therefore stable; back to the tribal patriarchy
of the time before the Fall, to the natural class rule of the wise
few over the ignorant many.

I believe that practically all the features of Plato's political
programme can be derived from these demands. They are, in turn, based upon his historicism; and they have to be combined with his sociological doctrines concerning the conditions for the stability of class rule. The main features I have in mind are:

(A) The strict division of the classes; i.e. the ruling class consisting of herdsmen and watch-dogs must be strictly separated from the human cattle.

(E) The identification of the fate of the state with that of the ruling class; the exclusive interest in this class, and in its unity; and subservient to this unity, the rigid rules for breeding and educating this class, and the strict supervision and collectivization of the interests of its members.

From these principal features, many other features can be derived, for instance:

(C) The ruling class has a monopoly of things like military virtues and training, and of the right to carry arms and to receive education of any kind; but it is excluded from any participation in economic activities, and especially from earning money.

(D) There must be a censorship of all intellectual activities of the ruling class, and a continual propaganda aiming at moulding and unifying their minds.
silver and bronze with gold and from this mixture,
variation
will be born and absurd irregularity; and whenever
these are
born they will beget struggle and hostility. And this
is how
we must describe the ancestry or origin of disunion,
wherever
she arises.'

This is Plato's story of the Number and of the Fall of
Man.
It is the basis of his historicist sociology,
especially of his funda-
mental law of social revolutions discussed in the last
chapter 41.
For racial degeneration explains the origin of disunion
in the
ruling class, and with it, the origin of all historical
development.
The internal disunion of human nature, the schism of
the soul,
leads to the schism of the ruling class. And as with
Heraclitus,
war, class war, is the father and promoter of all
change, and of
the history of man, which is nothing but the history of
the
breakdown of society. We see that Plato's idealist
historicism
ultimately rests not upon a spiritual, but upon a
biological basis;
it rests upon a kind of meta-biology 42 of the race of
men.
Plato was not only a naturalist who proffered a
biological theory
of the state, he was also the first to proffer a
biological and
racial theory of social dynamics, of political history.
c The
Platonic Number', says Adam 43, * is thus the setting
in which
Plato's "Philosophy of History" is framed.'

It is, I think, appropriate to conclude this sketch of
Plato's
descriptive sociology with a summary and an evaluation.
Plato succeeded in giving an amazingly true, though of course somewhat idealized, reconstruction of an early Greek tribal and collectivist society similar to that of Sparta. An analysis of the forces, especially the economic forces, which threaten the stability of such a society, enables him to describe the general policy as well as the social institutions which are necessary for arresting it. And he gives, furthermore, a rational reconstruction of the economic and historical development of the Greek city-states.

These achievements are unpaired by his hatred of the society in which he was living, and by his romantic love for the old tribal form of social life. It is this attitude which led him to formulate an untenable law of historical development, namely, the law of universal degeneration or decay. And the same attitude is also responsible for the irrational, fantastic, and romantic elements of, his otherwise excellent analysis. On the other hand, it was just his personal interest and his partiality which sharpened his eye and so made his achievements possible.

76 PLATO'S POLITICS

persist for such a long time in spite of the fact that Grote and Gomperz had pointed out the reactionary character of some doctrines of the Republic and the Laws. But even they did not see all the implications of these doctrines; they never doubted that Plato was, fundamentally, a humanitarian. And
their adverse criticism was ignored, or interpreted as a failure to understand and to appreciate Plato, who was by Christians considered a *Christian before Christ*, and by revolutionaries a revolutionary. This kind of complete faith in Plato is undoubtedly still dominant, and Field, for instance, finds it necessary to warn his readers that *we shall misunderstand Plato entirely if we think of him as a revolutionary thinker*. This is, of course, very true; and it would clearly be pointless if the tendency to make of Plato a revolutionary thinker, or at least a progressivist, were not fairly widespread. But Field himself has the same kind of faith in Plato; for when he goes on to say that Plato was *in strong opposition to the new and subversive tendencies* of his time, then surely he accepts too readily Plato's testimony for the subversiveness of these tendencies. The enemies of freedom have always charged its defenders with subversion. And nearly always they have succeeded in persuading the guileless and well-meaning.

The idealization of the great idealist permeates not only the interpretations of Plato's writings, but also the translations. Drastic remarks of Plato's which do not fit the translator's views of what a humanitarian should say are frequently either toned down or misunderstood. This tendency begins with the translation of the very title of Plato's so-called *Republic*. What comes first to our mind when hearing this title is that the author must be a liberal, if not a revolutionary. But the
title ' Republic ' is, quite simply, the English form of the Latin rendering of a Greek word that had no associations of this kind, and whose proper English translation would be c The Constitution ' or ' The City State ' or c The State '. The traditional translation * Republic ' has undoubtedly contributed to the general conviction that Plato could not have been a reactionary.

In view of all that Plato says about Goodness and Justice and the other Ideas mentioned, my thesis that his political demands are purely totalitarian and anti-humanitarian needs to be defended. In order to undertake this defence, I shall, for the next four chapters, break off the analysis of historicism, and concentrate upon a critical examination of the ethical Ideas

CHAPTER 6 : TOTALITARIAN JUSTICE

mentioned; and of their part in Plato's political demands. In the present chapter, I shall examine the Idea of Justice; in the three following chapters, the doctrine that the wisest and best should rule, and the Ideas of Truth, Wisdom, Goodness, and Beauty.

What do we really mean when we speak of c Justice ' ? I do not think that verbal problems of this kind are particularly important, or that it is possible to give a definite reply to them, since such terms are always used in various senses. However, I think that most of us, especially those whose general
outlook is humanitarian, mean something like this: (a) an equal distribution of the burden of citizenship, i.e. of those limitations of freedom which are necessary in social life; (b) equal treatment of the citizens before the law, provided, of course, that (c) the laws themselves neither favour nor disfavour individual citizens or groups or classes; (d) impartiality of the courts of justice; and (e) an equal share in the advantages (and not only in the burden) which their membership of the state may offer to the citizen.

If Plato had meant by 'justice' anything of this kind, then my claim that his programme is purely totalitarian would certainly be wrong and all those who believe that Plato's politics rested upon an acceptable humanitarian basis. But the fact is that he meant by 'justice' something entirely different.

What did Plato mean by 'justice'? I maintain that in the Republic he used the term 'just' as a synonym for that which is in the interest of the best state. And what is the interest of this best state? The arrest of change, by the maintenance of a rigid class division and class rule. If I am right in this interpretation, then we should have to say that Plato's demand for justice leaves his political programme at the level of totalitarianism; and we should have to conclude that we must guard against the danger of being impressed by mere words, '-'justice is the central topic of the Republic; in fact, *On Justice' is its traditional sub-title. 1$ his enquiry into the nature
of justice, Plato makes use of the method mentioned in the last chapter; he first tries to search for this Idea in the state, and then attempts to apply the result to the individual. One cannot say that Plato's question 'What is justice?' quickly finds an answer, for it is given in the Fourth Book, and then only after much hesitation. The considerations which lead up to it will be analysed more fully later in this chapter. Briefly, they are these.

78 PLATO'S POLITICS

The city is founded upon human nature, its needs, and its limitations. We have stated, and, you will remember, repeated over and over again that each man in our city should do one work only; namely, that work for which his nature is naturally best fitted. From this Plato concludes that everyone should mind his own business; that the carpenter should confine himself to carpentering, the shoemaker to making shoes. Not much harm is done, however, if two workers change their natural places. But should anyone who is by nature a worker (or else a member of the money-earning class) manage to get into the warrior class; or should a warrior get into the guardians' class, without being worthy of it; then this kind of change and of underhand plotting would mean the downfall of the city.' From this argument, Plato draws his final conclusion that any changing or intermeddling within the three classes must
injustice, and that the opposite, therefore, is justice: ' When each class in the city attends to its own business, the money-earning class as well as the auxiliaries and the guardians, then this will be justice.' This conclusion is reaffirmed and summed up a little later: * The city is just . . if each of its three classes attends to its own work. 5 This means that Plato identifies justice with the principle of class rule and of class privilege. For the principle that every class should attend to its own business means, briefly and bluntly, that the state is just if the ruler rules, if the worker works, and 7 if the slave slaves.

It will be seen that Plato's concept of justice is fundamentally different from our ordinary view as analysed above. Plato calls class privilege c just ', while we usually mean by justice rather the disregard of such privilege. But the difference goes further than that. We mean by justice some kind of equality in the treatment of individuals, while Plato considers justice not as a relationship between individuals, but as a property of the whole state, based upon a relationship between its classes. The state is just if it is healthy, strong, united sfable.

But was Plato perhaps right? Does c justice' perhaps mean what he says? I do not intend to discuss such a question. If anyone should maintain that 'justice' means the unchallenged rule of one class, then I should simply reply that I am all for injustice. In other words, I believe that nothing depends upon
words, and everything upon our practical demands or
decisions.
Behind Plato's definition of justice stands,
fundamentally, his de-
mmand for a totalitarian class rule, and his decision to
bring it about.

CHAPTER 6 I TOTALITARIAN JUSTICE 79

But was he not right in a different sense? Did his
idea of
justice perhaps correspond to the Greek way of using
this word? Did the Greeks perhaps mean, by 'justice ', something
holistic,
like the * health of the state ', and is it not utterly
unfair and
unhistorical to expect of Plato an anticipation of our
modern
idea of justice as equality of the citizens before the
law? This
question, indeed, has been answered in the affirmative, and the
claim has been made that Plato's holistic idea of ' social justice '
is characteristic of the traditional Greek outlook, of the ' Greek
genius ' which * was not, like the Roman, specifically
legal ';
but rather * specifically metaphysical ' 8 . But this
claim is
untenable. As a matter of fact, the Greek way of using
the word
'justice ' was indeed amazingly similar to our own
individualistic
and equalitarian usage.

In order to show this, I may first quote Aristotle, another
opponent of equalitarianism, who, under the influence of Plato's
naturalism, elaborated among other things the theory that some
men are by nature born to slave 9 . Nobody could be less
interested in spreading an equalitarian and
individualistic
interpretation of the term 'justice'. But when speaking of the judge, whom he describes as a personification of that which is just', Aristotle maintains that it is the task of the judge to restore equality'. He tells us that 'all men think justice to be a kind of equality', an equality, namely, which * pertains to persons'. He even thinks (but here he is wrong) that the Greek word for 'justice' is to be derived from a root that means 'equal division'.

And when discussing the principles of democracy, he says that 'democratic justice is the application of the principle of numerical equality (as distinct from proportionate equality)'. All this is certainly not merely his personal impression of the meaning of justice, nor is it perhaps only a description of the way in which the word was used after Plato; it is rather the expression of a universal and ancient as well as popular use of the word 'justice'. 10

In view of this evidence, we must say, I think, that Plato's holistic and anti-equalitarian interpretation of justice was an innovation; and that Plato attempted to present his totalitarian class rule as 'just' while people generally meant by 'justice' the exact opposite.

This result is startling, and opens up a number of questions. Why did Plato claim that justice meant inequality if, in general usage, it meant equality? To me the only likely reply seems to be that he wanted to make propaganda for his totalitarian state.
by persuading the people that it was the 'just' state. But was such an attempt worth his while, considering that it is not words but what we mean by them that matters? Of course it was worth while; this can be seen from the fact that he fully succeeded in persuading his readers, down to our own day, that he was candidly advocating justice, i.e. that justice they were striving for. And it is a fact that he thereby spread doubt and confusion among equalitarians and individualists who, under the influence of his authority, began to ask themselves whether his idea of justice was not truer and better than theirs. Since the word 'justice' symbolizes to us an aim of such importance, and since so many are prepared to endure anything for it, and to do all in their power for its realization, the enlistment of these forces, or at least, the paralysing of equalitarianism, was certainly an aim worth being pursued by a believer in totalitarianism. But was Plato aware that justice meant so much to men? He was; for he writes in the Republic: * When a man has committed an injustice, . . . is it not true that his courage refuses to be stirred? . . . But when he believes that he has suffered injustice, does not his vigour and his wrath flare up at once? And is it not equally true that when fighting on the side of what he believes to be just, he can endure hunger and cold, and any kind of hardship? And does he not hold on until he conquers, persisting in this state
of exaltation until he has either achieved his aim, or perished?'

Reading this, we cannot doubt that Plato knew the power of faith, and, above all, of a faith in justice. Nor can we doubt that the Republic must tend to pervert this faith, and to replace it by a directly opposite faith. And in the light of the available evidence, it seems to me most probable that Plato knew very well what he was doing. Equalitarianism was his arch-enemy, and he was out to destroy it; no doubt, in the sincere belief that it was a great evil and a great danger. But his attack upon equalitarianism was not an honest attack. Plato did not dare to face the enemy openly.

I proceed to present the evidence in support of this contention.

The Republic is probably the most elaborate monograph on justice ever written. It examines a variety of views about justice, and it does this in a way which leads us to believe that Plato omitted none of the more important theories known to him. In fact, Plato clearly implies 12 that because of his vain attempts to track it down among the current views, a new search for justice is necessary. Yet in his survey of the current theories, he does not even mention the view that justice is equality before the law.

This omission can be explained only in two ways. Either he
must have overlooked the equalitarian theory, or he must have purposely avoided it. The first possibility at once seems very unlikely if we consider the care with which the Republic is composed, and the necessity for Plato to analyse the theories of his opponents if he was to make a forceful presentation of his own. But this possibility appears even more improbable if we consider the wide popularity of the equalitarian theory. We need not, however, rely upon merely probable arguments since it can be easily shown that, when writing the Republic, Plato was not only acquainted with the equalitarian theory but well aware of its importance. We shall see later in this chapter that equalitarianism played a considerable role in the Gorgias, written earlier than the Republic; and in spite of the fact that he does not discuss equalitarianism in the Republic, he did not change his mind regarding its influence, for the Republic clearly testifies to its popularity. It is mentioned as a very popular democratic belief, to be treated only with scorn; and all we hear about it are a few sneers and pin-pricking remarks, well matched with the abusive attack upon Athenian democracy. The possibility that the equalitarian theory of justice was overlooked by Plato, is therefore ruled out, and so is the possibility that he did not see that a discussion of an influential theory diametrically opposed to his own was most important. The fact that his silence in the Republic is broken only by a few jocular remarks (apparently he thought them too good to be suppressed) can be
explained only
as a conscious refusal to discuss it. In view of all
that, I do not
see how Plato's method of impressing upon his readers
the belief
that all important theories have been examined can be
reconciled
with the standards of intellectual honesty; though we
must
add that his failure is undoubtedly due to his complete
devotion
to a cause in whose goodness he firmly believed.

In order to appreciate the full implications of Plato's
practically unbroken silence on this issue, we must first see
clearly that
the equalitarian movement as Plato knew it represented
all he
hated, and that his own theory, in the Republic and in
all later
works, was largely a reply to the powerful challenge of
the new
equalitarianism and humanitarianism. In order to show
this, I
shall now discuss the main principles of the
humanitarian move-
ment, and contrast them with the corresponding
principles of
Platonic totalitarianism.

82 PLATO'S POLITICS

The humanitarian theory of justice makes three main
demands,
namely (i) the equalitarian principle proper, i.e. the
exclusion of
*natural ' privileges, (2) the principle of
individualism in general,
and (3) the principle that it is the end of the state
to protect the
freedom of its citizens. To each of these political
demands there
corresponds a directly opposite principle of Platonism,
namely
(i) the principle of natural privilege, (2) the
principle of holism
or collectivism in general, and (3) the principle that it is the end of the individual to maintain, and to strengthen, the stability of the state. I shall discuss these points in order.

(i) Equalitarianism proper is the demand that the citizens of the state should be treated impartially. It is the demand that birth, family connection, or wealth must not influence those who administer the law to the citizens. In other words, it does not recognize any 'natural' privileges, although certain privileges may be conferred by the citizens upon those they trust.

This equalitarian principle had been admirably formulated by Pericles a few years before Plato's birth, in an oration which has been preserved by Thucydides 18. It will be quoted more fully in chapter 10, but two of its sentences may be given here: *Our laws*, said Pericles, *afford equal justice to all alike in their private disputes, but we do not ignore the claims of excellence. When a citizen distinguishes himself, then he is preferred to the public service, not as a matter of privilege, but as a reward for merit; and poverty is not a bar...* These sentences express some of the fundamental aims of the great equalitarian movement which, as we have seen, did not even shrink from attacking slavery. In Pericles' own generation, this movement was represented by Euripides, Antiphon, and Hippias, who have all been quoted in the last chapter, and also by Herodotus 17. In Plato's generation, it was represented by Alcidamas and Lycophron, both quoted above; another supporter was
Antisthenes, who had been one of Socrates' closest friends.

Plato's principle of justice was, of course, diametrically opposed to all this. He demanded *natural leaders*. But how did he contest the equalitarian principle? And how did he establish his own demands?

It will be remembered from the last chapter that some of the best-known formulations of the equalitarian demands were couched in the impressive but questionable language of *natural rights*, and that some of their representatives argued in favour of these demands by pointing out the *natural*, i.e. biological,

CHAPTER 6 I TOTALITARIAN JUSTICE 83

equality of men. We have seen that the argument is rather irrelevant; that men are equal in some important respects, but unequal in others; and that normative demands cannot be derived from this fact. It is therefore interesting to note that the naturalist argument was not used by all equalitarians, and that Pericles, for one, did not even allude to it 18.

Plato quickly found that naturalism was a rather weak spot within the equalitarian doctrine, and he took the fullest advantage of this weakness. To tell men that they are equal has a certain sentimental appeal. But this appeal is small compared with that made by a propaganda that tells them that they are superior to others, and that others are inferior to them. Are
you naturally
equal to your servants, to your slaves, to the manual
worker who
is riot better than an animal? The very question is
ridiculous!
Plato seems to have been the first to appreciate the
possibilities
of this reaction, and to oppose contempt, scorn, and
ridicule to
the claim to natural equality. This explains why he was
anxious
to impute the naturalistic argument even to those of
his opponents
who did not use it; in the Menexenus, a parody of
Pericles'
oration, he therefore insists on linking together the
claims to
equal laws and to natural equality: c The basis of our
con-
stitution is equality of birth', he says ironically.
We are all
brethren, and are all children of one mother; . . . and
the natural
equality of birth induces us to strive for equality
before the law.' 19

Later, in the Laws, Plato summarizes his reply to
equalitarism in the formula: c Equal treatment of
equals must
produce inequity' 20; and this was developed by
Aristotle into
the formula ' Equality for equals, inequality for
unequals'.
This formula indicates what may be termed the standard
objection
to equalitarianism; the objection that equality would
be excellent
if only men were equal, but that it is manifestly
impossible since
they are not equal, and since they cannot be made
equal. This
apparently very realistic objection is, in fact, most
unrealistic,
for political privileges have never been founded upon
natural
differences of character. And indeed, Plato does not
seem to
have had much confidence in this objection when writing
the Republic, for it is used there only in one of his sneers at democracy when he says that it * distributes equality to equals and unequals alike '. 21 Apart from this remark, he prefers not to argue against equalitarianism, but to forget it.

Summing up, it can be said that Plato never underrated the significance of the equalitarian theory, supported as it was by a man like Pericles, but that, in the Republic, he did not treat it at all; he attacked it, but not squarely and openly.

But how did he try to establish his own anti-equalitarianism, his principle of natural privilege? In the Republic, he proffered three different arguments, though two of them hardly deserve the name. The first 22 is the surprising remark that, since all other virtues of the state have been examined, the remaining one, that of 'minding one's own business', must be 'justice'. I am reluctant to believe that this was meant as an argument; but it must be, for Plato's leading speaker, 'Socrates', introduces it by asking: *Do you know how I deduce this?* The second argument is more interesting, for it is an attempt to show that his anti-equalitarianism can be derived from the ordinary (i.e. equalitarian) view that justice is impartiality. I quote the passage in full. Remarking that the rulers of the city will also be its judges, *Socrates* says 23: 6 And will it not
be the aim of
their jurisdiction that no man shall take what belongs
to another,
and shall be deprived of what is his own? ' ' Yes',
is the reply
of 'Glaucon', the interlocutor, 'that will be their
intention.'
'Because that would be just? ' ' Yes.' * Accordingly,
to keep
and to practise what belongs to us and is our own will
be generally
agreed upon to be justice.' Thus it is established that
'to keep
and to practise what is one's own' is the principle of
justice, according to our ordinary ideas of justice. Here
the second
argument ends, giving way to the third (to be analysed
below)
which leads to the conclusion that it is justice to
keep to one's
own station (or to do one's own business), i.e. the
station (or the
business) of one's own class or caste.

The sole purpose of this second argument is to impress
upon
the reader that 'justice', in the ordinary sense of
the word,
requires us to keep to our stations, since we should
always keep
what belongs to us. That is to say, Plato wishes his
readers to
draw the inference: * It is just to keep and to
practise what is
one's own. My place (or my business) is my own. Thus
it is
just for me to keep to my place (or to practise my
business).' 
This is about as sound as the argument: 'It is just
to keep and
to practise what is one's own. This plan of stealing
your money
is my own. Thus it is just for me to keep to my plan,
and to
put it into practise, i.e. to steal your money.' It is
clear that the
inference which Plato wishes us to draw is nothing but
a crude
juggle with the meaning of the term 'one's own'. (For the
problem is whether justice demands that everything
which is in

CHAPTER 6 I TOTALITARIAN JUSTICE 85

some sense 'our own', e.g. 'our own' class, should
therefore be
treated, not only as our possession, but as our
inalienable possession.) This crude juggle is Plato's way of establishing
what
Adam calls 'a point of contact between his own view of
Justice
and the popular . . meaning of the word'. This is how
the
greatest philosopher of all times tries to convince us
that he has
discovered the true nature of justice.

The third and last argument which Plato offers is much
more
serious. It is an appeal to the principle of holism or
collectivism,
and is connected with the principle that it is the end
of the
individual to maintain the stability of the state. It
will therefore
be discussed, in this analysis, under (2) and (3).

But before proceeding to these points, I wish to draw
attention
to the 'preface' which Plato places before his
description of the
6 discovery 'which we are here examining. It must be con-
sidered in the light of the observations we have made
so far.
Viewed in this light, the 'lengthy preface' this is
how Plato
himself describes it appears as an ingenious attempt to
prepare
the reader for the 'discovery of justice' by making
him believe
that there is an argument going on when in reality he
is only
faced with a display of dramatic devices, designed to soothe his critical faculties.

Having discovered wisdom as the virtue proper to the guardians and courage as that proper to the auxiliaries, * Socrates' announces his intention of making a final effort to discover justice. * Two things are left ' 24 , he says, 6 which we shall have to discover in the city: temperance, and finally that other thing which is the main object of all our investigations, namely justice.'

c Exactly,' says Glaucon. Socrates now suggests that temperance shall be dropped. But Glaucon protests and Socrates gives in, saying that * it would be dishonest if I were to refuse J . This little dispute prepares the reader for the re-introduction of justice, suggests to him that Socrates possesses the means for its ' discovery ', and reassures him that Glaucon is carefully watching Plato's intellectual honesty in conducting the argument, which he, the reader himself, need not therefore watch at all 25 .

Socrates next proceeds to discuss temperance, which he discovers to be the only virtue proper to the workers. (Temperance, by the way, can be clearly distinguished from justice. Justice means to keep one's place; temperance means to be satisfied with it. What other virtue could be proper to the workers who fill their bellies like the beasts?) When temperance

has been discovered, Socrates asks: ' And what about
the last principle? Obviously it will be justice.' Obviously, 5 replies Glaucon. * Now, my dear Glaucon ', says Socrates, c we must, like hunters, surround her cover and keep a close watch, and we must not allow her to escape, and to get away; for surely, justice must be somewhere near this spot. You had better look out and search the place. And if you are the first to see her, then give me a shout! ' Glaucon, like the reader, is of course unable to do anything of the sort, and implores Socrates to take the lead. * Then offer your prayers with me ', says Socrates, ' and follow me. 5 But even Socrates finds the ground c hard to traverse, since it is covered with underwood; it is dark, and difficult to explore . . But ', he says, * we must go on with it '. And instead of protesting c Go on with what? With our exploration, i.e. with our argument? But we have not even started. There has not been a shimmer of sense in what you have said so far ', Glaucon, and the naive reader with him replies meekly: ' Yes, we must go on.' Now Socrates reports that he has ' got a glimpse ' (we have not), and gets excited. ' Hurray! Hurray! * he cries, c Glaucon! There seems to be a track! I think now that the quarry will not escape us! ' That is good news ', replies Glaucon. ' Upon my word ', says Socrates, c we have made utter fools of ourselves. What we were looking for at a distance, has been lying at our very feet all this time! And we never saw it! ' With exclamations and repeated assertions of
this kind, Socrates continues for a good while, interrupted by Glaucon, whose function it is to give expression to the reader's feelings, and who asks Socrates what he has found. But when Socrates says only 'We have been talking of it all the time, without realizing that we were actually describing it', Glaucon expresses the reader's impatience and says: 'This preface gets a bit lengthy; remember that I want to hear what it is all about.' And only then does Plato proceed to proffer the two c arguments 'which I have outlined.

As Glaucon's last remark shows, Plato was fully conscious of what he was doing in this c lengthy preface '. I cannot interpret it as anything but a successful attempt to lull the reader's critical faculties, and, by means of a dramatic display of verbal fireworks, to divert his attention from the intellectual poverty of this masterly piece of dialogue. Plato knew its weakness, and how to hide it.

(2) The problem of individualism and collectivism is closely

CHAPTER 6 I TOTALITARIAN JUSTICE 87

related to that of equality and inequality. Before going on to discuss it, a few terminological remarks seem to be necessary.

The term *individualism* ' can be used (according to the Oxford Dictionary) in two different ways: (a) in opposition to collectivism, and (b) in opposition to altruism. There
is no other word to express the former meaning, but several synonyms for the latter, for example *egoism* or *selfishness*. This is why in what follows I shall use the term *individualism* exclusively in sense (a), using terms like *egoism* or *selfishness* if sense (b) is intended. A little table may be useful:

(a) Individualism is opposed to (a') Collectivism.

(b) Egoism is opposed to (b') Altruism

Now these four terms describe certain attitudes, or demands, or decisions, or codes of normative laws. Though necessarily vague, they can, I believe, be easily illustrated by examples and so be used with a precision sufficient for our present purpose.

Let us begin with collectivism, since this attitude is already familiar to us from our discussion of Plato's holism. His demand that the individual should observe the interests of the whole, whether this be the city, the tribe, the race, or any other collective body, was illustrated in the last chapter by a few passages. To quote one of these again, but more fully:

'The part exists for the sake of the whole, but the whole does not exist for the sake of the part... You are created for the sake of the whole and not the whole for the sake of you.' This quotation not only illustrates collectivism, but also conveys its strong emotional appeal. The appeal is to various feelings, e.g. the longing to belong to a group or a tribe; and one factor in it is the moral appeal for altruism and against selfishness. Plato suggests that
if you cannot sacrifice your interests for the sake of the whole,
then you are selfish. V

Now a glance at our little table will show that this is not so.
Collectivism is not opposed to egoism, nor is it identical with altruism or unselfishness. Collective or group egoism, for instance class egoism, is a very common thing (Plato knew this very well), and this shows clearly enough that collectivism as such is not opposed to selfishness. On the other hand, an anti-collectivist, i.e. an individualist, can, at the same time, be an altruist; he can be ready to make sacrifices in order to help other individuals. One of the best examples of this attitude is perhaps Dickens. It would be difficult to say which is the stronger, his passionate hatred of selfishness or his passionate interest in individuals with

PLATO'S POLITICS

all their human weaknesses; and this attitude is combined with a dislike, not only of what we now call collective bodies or collectives a9, but even of a genuinely devoted altruism, if directed towards anonymous groups rather than concrete individuals. (I remind the reader of Mrs. Jellyby in Bleak House, *a lady devoted to public duties*.) These illustrations, I think, explain sufficiently clearly the meaning of our four terms; and they show that any of the terms in our table can be combined with either of the two terms that stand in the other line (which gives four
possible combinations).

Now it is interesting that for Plato, and for most Platonists, an altruistic individualism (as for instance that of Dickens) cannot exist. According to Plato, the only alternative to collectivism is egoism; he simply identifies all altruism with collectivism, and all individualism with egoism. This is not a matter of terminology, of mere words, for instead of four possibilities, Plato recognized only two. This has created considerable confusion in speculation on ethical matters, even down to our own day.

Plato's identification of individualism with egoism furnishes him with a powerful weapon for his defence of collectivism as well as for his attack upon individualism. In defending collectivism, he can appeal to our humanitarian feeling of unselfishness; in his attack, he can brand all individualists as selfish, as incapable of devotion to anything but themselves. This attack, although aimed by Plato against individualism in our sense, i.e. against the rights of human individuals, reaches of course only a very different target, egoism. But this difference is constantly ignored by Plato and the Platonists.

Why did Plato try to attack individualism? I think he knew very well what he was doing when he trained his guns upon this position, for individualism, perhaps even more than egalitarianism, was a strong point in the defences of the new humanitarian creed. The emancipation of the individual was indeed
the great spiritual revolution which had led to the breakdown of tribalism and to the rise of democracy. Plato's uncanny sociological intuition shows itself by the way in which he invariably discerned the enemy wherever he met him.

Individualism was part of the old intuitive idea of justice. That justice is not, as Plato would have it, the health and harmony of the state, but rather a certain way of treating individuals, is emphasized by Aristotle, when he says 'justice is something that

CHAPTER 6 : TOTALITARIAN JUSTICE 89

pertains to persons' 30. This individualistic element had been emphasized by the generation of Pericles. Pericles himself made it clear that the laws must guarantee equal justice to all alike in their private disputes'; but he went further.

* We do not feel called upon', he said, 'to nag at our neighbour if he chooses to go his own way. 1 (Compare this with Plato's remark 31 that the state does not produce men e for the purpose of letting them loose, each to go his own way . .'). Pericles insists that this individualism must be linked with altruism: * We are taught . . never to forget that we must protect the injured'; and his speech culminates in a description of the young Athenian who grows up ' to a happy versatility, and to self-reliance. 5

This individualism, united with altruism, has become
the basis of our western civilization. It is the central doctrine of Christianity ('love your neighbour', says Christianity, not 'love your tribe'); and it is the core of all ethical doctrines which have grown from our civilization and stimulated it. It is also, for instance, Kant's central practical doctrine (*always recognize that human individuals are ends, and do not use them as mere means to your ends*). There is no other thought which has been so powerful in the moral development of man.

Thus Plato was right when he saw in this doctrine the enemy of his caste state; and he hated it more than any other of the *subversive* doctrines of his time. In order to show this even more clearly, I shall quote two passages from the Laws 32 whose truly astonishing hostility towards the individual is, I think, too little appreciated. The first of them is famous as a reference to the Republic, whose community of women and children and property it discusses. Plato describes here the constitution of the Republic as the highest form of the state; and in this highest state, he tells us, *everything possible has been achieved in the direction of utterly eradicating everything from our life that is private and individual*. 'And he continues to outline the principles of such a state: 'So far as it can be done, even those things which nature herself has made private and individual should somehow become the common property of all. Our very eyes and ears and hands should see, hear, and act, as
if they belonged not to individuals but to the community. All men should be moulded to praise and to blame the same things, and at the same time. And all the laws of such a state must be designed for unifying the city to the utmost.' Plato goes on to say that "no man can find a better criterion of the highest excellence of a state ' than the principles just expounded; and he describes such a state as 'divine', and as the 'model' or 'pattern' or 'original' of the state, i.e. as its Form or Idea. This is Plato's own view of the Republic, expressed at a time when he had given up hope of realizing his political ideal in all its glory.

The second passage, also from the Laws, is, if possible, even more outspoken. It must be admitted that it deals mainly with military discipline, but Plato leaves no doubt that these same militarist principles should be adhered to in peace as well as in war, and that he aimed at a permanent and total mobilization of all members of his state: 'The greatest principle is that nobody, whether male or female, should ever be without a leader. Nor should the mind of anybody be habituated to letting him do anything at all on his own initiative, neither out of zeal, nor even playfully. But in war as well as in the midst of peace
to his leader he shall direct his eye, and follow him faithfully.
And even in the smallest matters he should stand under leadership. For example, he should get up, or move, or wash, or take his meals only if he has been told to do so. . .
In a word, he should teach his soul, by long habit, never to dream of acting independently, and in fact to become utterly incapable of it. 9

These are strong words. Never was a man more in earnest in his hostility towards the individual. And this hatred is deeply rooted in the fundamental dualism of Plato's philosophy; he hated the individual and his freedom just as he hated the varying particular experiences, the variety of the changing world of sensible things. In the field of politics, the individual is to Plato the Evil One himself.

It is amazing that this attitude, anti-humanitarian and anti-Christian as it is, has been consistently idealized. It has been interpreted as humane, as unselfish, as altruistic, and as Christian. E. B. England, for instance, calls the first of these two passages from the Laws a vigorous denunciation of selfishness. Similar words are used by Barker, when discussing Plato's theory of justice. He says that Plato's aim was to replace selfishness and civil discord by harmony, and that the old harmony of the interests of the State and the individual is thus restored in the teachings of Plato; but restored on a new and higher level, because it has been elevated into a conscious sense of harmony. Such statements and countless similar
CHAPTER 6 | TOTALITARIAN JUSTICE

be easily explained if we remember Plato's identification of individualism with egoism; for all these Platonists believe that anti-individualism is the same as selflessness. This illustrates my contention that this identification had the effect of a successful piece of anti-humanitarian propaganda, and that it has confused speculation on ethical matters down to our own time. But we must also realize that those who, deceived by the identification and by high-sounding words, exalt Plato's reputation as a teacher of morals and announce to the world that his ethics is the nearest approach to Christianity before Christ, are preparing the way for totalitarianism and especially for a totalitarian, anti-Christian interpretation of Christianity. And this is a dangerous thing, for there have been times when Christianity was dominated by totalitarian ideas. There was an inquisition; and, in another form, it may come again.

It may therefore be worth while to mention some further reasons why guileless people have persuaded themselves of the humaneness of Plato's intentions. One is that when preparing the ground for his collectivist doctrines, Plato usually begins by quoting a Greek proverb: 'Friends should share whatever they possess.' This is, undoubtedly, an unselfish, high-minded and excellent sentiment. Who could suspect that an argument starting from such a commendable assumption would
arrive at a wholly anti-humanitarian conclusion? Another and important point is that there are many genuinely humanitarian sentiments expressed in Plato's dialogues, particularly in those written before the Republic when he was still under the influence of Socrates. I mention especially Socrates' doctrine in the Gorgias, that it is worse to do injustice than to suffer it. This doctrine is not only altruistic, but certainly also individualistic; for in a collectivist theory of justice like that of the Republic, injustice is an act against the state, not against a particular man, and though a man may commit an act of injustice, only the collective can suffer from it. But in the Gorgias we find nothing of the kind. The theory of justice is a perfectly normal one, and the examples of injustice given by *Socrates'* (who has here probably a good deal of the real Socrates in him) are such as boxing a man's ears, injuring, or killing him. Socrates' teaching that it is better to suffer such acts than to do them is indeed very similar to Christian teaching, and his doctrine of justice fits in excellently with the spirit of Pericles. (An attempt to interpret this will be made in chapter 10.)

Now the Republic develops a new doctrine of justice which is not only incompatible with such an individualism, but utterly hostile towards it. But the reader easily believes that Plato is still holding fast to the doctrine of the Gorgias. For
in the Republic, Plato frequently alludes to the doctrine that it is better to suffer than to commit injustice, in spite of the fact that this is simply nonsense from the point of view of the collectivist theory of justice proffered in this work. Furthermore, we hear in the Republic the opponents of Socrates' giving voice to the opposite theory, that it is good and pleasant to inflict injustice, and bad to suffer it. Of course, every humanitarian is repelled by such cynicism, and when Plato formulates his aims through the mouth of Socrates: 'I fear to commit a sin if I permit such evil talk about justice in my presence, without doing my utmost to defend her' 37 , then the trusting reader is convinced of Plato's good intentions, and ready to follow him wherever he goes.

The effect of this assurance of Plato's is much enhanced by the fact that it follows, and is contrasted with, the cynical and selfish speeches 38 of Thrasymachus, who is depicted as a political desperado of the worst kind. At the same time, the reader is led to identify individualism with the views of Thrasymachus, and to think that Plato, in his fight against it, is fighting against all the subversive and nihilistic tendencies of his time. But we should not allow ourselves to be frightened by such bogies as Thrasymachus (there is a great similarity between his portrait and the modern bogey of 'bolshevism') into accepting another more real and more dangerous because less obvious form of barbarism. For Plato replaces Thrasymachus's doctrine that the
individual's might is right by the not less barbaric doctrine that right is everything that furthers the might of the state.

To sum up, because of his radical collectivism Plato is not even interested in those problems which men usually call the problems of justice, in the impartial weighing of the contesting claims of individuals. Nor is he interested in adjusting the individual's claims to those of the state. For the individual is altogether inferior. * I legislate with a view to the whole ', says Plato, * . . for I rightly hold the individual's feelings to be on an altogether inferior level of value*. 39 He is interested solely in the collective whole as such, and justice, to him, is nothing but, the health, unity, and stability of the collective body.

(3) So far, we have seen that humanitarian ethics demands an equalitarian and individualistic interpretation of justice; but we

CHAPTER 6 I TOTALITARIAN JUSTICE 93

have not yet outlined the humanitarian view of the state as such. On the other hand, we have seen that Plato's theory of the state is totalitarian; but we have not yet explained the application of this theory to the ethics of the individual. Both these tasks will be undertaken now, the second first; and I shall begin by analysing the third of Plato's arguments in his ' discovery ' of justice, an argument which has so far been sketched only very
roughly. Here is Plato's third argument 40:

* Now see whether you agree with me,' says Socrates. * Do you think it would do much harm to the city if a carpenter started making shoes and a shoemaker carpentering? " Not very much.' ' But should one who is by nature a worker, or a member of the money-earning class . . manage to get into the warrior class; or should a warrior get into the guardians' class without being worthy of it; then this kind of change and of underhand plotting would mean the downfall of the city?'

' Most definitely it would.' ' We have three classes in our city, and I take it that any such plotting or changing from one class to another is a great crime against the city, and may rightly be denounced as the utmost wickedness? ' ' Assuredly.' ' But you will certainly declare that utmost wickedness towards one's own city is injustice? ' ' Certainly.' ' Then this is injustice. And conversely, we shall say that when each class in the city attends to its own business, the money-earning class as well as the auxiliaries and the guardians, then this will be justice.'

Now if we look at this argument, we find (a) the sociological assumption that any relaxing of the rigid caste system must lead to the downfall of the city; (b) the constant reiteration of the one argument that what harms the city is injustice; and (c) the inference that the opposite is justice. Now we may grant here the sociological assumption (a) since it is Plato's ideal to arrest social change, and since he means by c harm ' anything
that may lead to change; and it is probably quite true that the arresting
of all social change can only be achieved by the most rigid caste
system. And we may further grant the inference (c) that the
opposite of injustice is justice. Of greater interest, however,
(b); a glance at Plato's argument will show that his whole trend
of thought is dominated by the question: does this thing harm
the city? Does it do much harm or little harm? He constantly
reiterates that what threatens to harm the city is morally wicked
and unjust.

We see here that Plato recognizes only one ultimate standard,

94 PLATO'S POLITICS

the interest of the state. Everything that furthers it is good and
virtuous and just; everything that threatens it is bad and wicked
and unjust. Actions that serve it are moral; actions that
endanger it, immoral. In other words, Plato's moral
code is
strictly utilitarian; it is a code of collectivist or political utilitarianism. The criterion of morality is the interest of the state. Morality
is nothing but political hygiene.

This is the collectivist, the tribal, the totalitarian theory of
morality: 'Good is what is in the interest of my group; or my
tribe; or my state.' It is easy to see what this morality implied
for international relations: that the state itself can never be
wrong in any of its actions, as long as it is strong;
that the state
has the right, not only to do violence to its citizens, should that
lead to an increase of strength, but also to attack other states,
provided it does so without weakening itself. (This inference,
the explicit recognition of the amorality of the state, and con-
sequently the defence of moral nihilism in international relations,
was drawn by Hegel.)

From the point of view of totalitarian ethics, from the point of
view of collective utility, Plato's theory of justice is perfectly
correct. To keep one's place is a virtue. It is that civil virtue
which corresponds exactly to the military virtue of discipline.
And this virtue plays exactly that role which 'justice'
plays in Plato's system of virtues. For the cogs in the great
clockwork of the state can show virtue in two ways. First, they
must be fit for their task, by being of the right size, shape,
strength, etc.; and secondly, they must be fitted each into its right
place and must retain that place. The first type of virtues, fitness
for a specific task, will lead to a differentiation, in accordance
with the specific task of the cog. Certain cogs will be virtuous, i.e.
fit, only if they are large; others if they are strong; and others if they are
smooth. But the virtue of keeping to one's place will be common
to all of them; and it will at the same time be a virtue of the
whole: that of being properly fitted together of being in
harmony. To this universal virtue Plato gives the name '
justice'.
This procedure is perfectly consistent and it is fully justified from
the point of view of totalitarian morality. If the individual is nothing but a cog, then ethics is nothing but the study of how to fit him into the whole.

I wish to make it clear that I believe in the sincerity of Plato's totalitarianism. His demand for the unchallenged domination of one class over the rest was uncompromising, but his ideal was not the maximum exploitation of the working classes by the upper class; it was the stability of the whole. But the reason he gives for the necessity of keeping the exploitation within limits, is again purely utilitarian. It is the interest of stabilizing the class rule. Should the guardians try to get too much, he argues, then they will in the end have nothing at all. If they are not satisfied with a life of stability and security, and are tempted, by their power, to appropriate for themselves all the wealth of the city, then surely they are bound to find out how wise Hesiod was when he said, "the half is more than the whole." 41

But we must realize that even this tendency to restrict the exploitation of class privileges is a typical feature of totalitarianism. Totalitarianism is not simply amoral. It is the morality of the group, or the tribe; it is not individual but collective selfishness.

Considering that Plato's third argument is straightforward and consistent, the question may be asked why he needed
the lengthy preface ' as well as the two preceding arguments?
Why all this uneasiness? (Platonists will of course reply that this uneasiness exists only in my imagination. That may be so. But the irrational character of the passages can hardly be explained away.) The answer to this question is, I believe, that Plato's collective clockwork would hardly have appealed to his readers if it had been presented to them in all its barrenness and meaninglessness. Plato was uneasy because he knew and feared the strength and the moral appeal of the forces he tried to break!
He did not dare to challenge them, but tried to win them over for his own purposes. Whether we witness in Plato's writings a cynical and conscious attempt to employ the moral sentiments of the new humanitarianism for his own purposes, or whether we witness rather a tragic attempt to persuade his own better conscience of the evils of individualism, we shall never know.
My personal impression is that the latter is the case, and that this inner conflict is the main secret of Plato's fascination. I think that Plato was moved to the depths of his soul by the new ideas, and especially by the great individualist Socrates and his martyrdom. And I think that he fought against this influence upon himself as well as upon others with all the might of his unequalled intelligence, though not always openly. This explains also why from time to time, amid all his totalitarianism, we find some humanitarian ideas. And it explains why it was possible
for philosophers to represent Plato as a humanitarian.

A strong argument in support of this interpretation is the way

96 PLATO'S POLITICS

in which Plato treated, or rather, maltreated, the humanitarian and rational theory of the state, a theory which had been developed for the first time in his generation.

In a clear presentation of this theory, the language of political demands should be used; that is to say, we should not try to answer the essentialist question: What is the state, what is its true nature, its real meaning? Nor should we try to answer the historicist question: How did the state originate, and what is the origin of political obligation? We should rather put our question in this way: What do we demand from a state? And in order to find out our fundamental demands, we can ask: Why do we prefer living in a well-ordered state to living without a state, i.e. in anarchy? This way of asking our question is the only rational one. It is the question which a technologist must put before he can proceed to the construction or reconstruction of any political institution. For only if he knows what he wants can he decide whether a certain institution is or is not well adapted to its function.

Now if we ask our question in this way, the reply of the humanitarian will be: What I demand from the state is protec-
tion; not only for myself, but for others too. I demand protection for my own freedom and for other people's. I do not wish to live at the mercy of anybody who has the larger fists or the bigger guns. In other words, I wish to be protected against aggression from other men. I want the difference between aggression and defence to be recognized, and defence to be supported by the organized power of the state. I am perfectly ready to see my own freedom of action somewhat curtailed by the state if I can obtain protection of what remains, since I know that some limitations of my freedom are necessary; for instance, I must give up my 'freedom' to attack, if I want the state to support defence against any attack. But I demand that the fundamental purpose of the state should not be lost sight of; I mean, the protection of that freedom which does not harm other citizens. Thus I demand that the state must limit the freedom of the citizens as equally as possible, and not beyond necessity.

Something like this will be the demand of the humanitarian, of the equalitarian, of the individualist. It is a demand which permits the social technologist to approach political problems rationally, i.e. from the point of view of a fairly clear and definite aim.

Against the claim that an aim like this can be formulated

CHAPTER 6: TOTALITARIAN JUSTICE 97
sufficiently clearly and definitely, many objections have been raised. It has been said that once it is recognized that freedom must be limited, the whole principle of freedom breaks down, and the question what limitations are necessary and what are wanton cannot be decided rationally, but only by authority. But this objection is due to a muddle. It mixes up the fundamental question of what we want from a state with certain important technological difficulties in the way of the realization of our aims. It is certainly difficult to determine exactly the degree of freedom that can be left to the citizens without endangering that freedom whose protection is the task of the state. But that something like an approximate determination of that degree is possible, is proved by experience, i.e. by the existence of democratic states. In fact, this process of approximate determination is one of the main tasks of legislation in democracies. It is a difficult process, but its difficulties are certainly not such as to force upon us a change in our fundamental demands. They are stated briefly, that the state should be considered as a society for the prevention of crime, i.e. aggression. And the whole objection that it is hard to know where freedom ends and crime begins is answered, in principle, by the famous story of the hooligan who protested that, being a free citizen, he could move his fist in any direction he liked; whereupon the judge wisely replied: * The freedom of the movement of your fists is limited
by the position of your neighbour's nose.'

The view of the state which I have sketched here may be called 'protectionism'. The term 'protectionism' has often been used to describe tendencies which are opposed to freedom. Thus the economist means by protectionism the policy of protecting certain industrial interests against competition; and the moralist means by it the demand that officers of the state shall establish a moral tutelage over the population. Although the political theory which I call protectionism is not connected with any of these tendencies, and although it is fundamentally a liberal theory, I think that the name may be used to indicate that, though liberal, it has nothing to do with the policy of laissez faire. Liberalism and state-interference are not opposed to each other. On the contrary, any kind of freedom is clearly impossible unless it is guaranteed by the state. A certain amount of state control in education, for instance, is necessary, if the young are to be protected from a neglect which would make them unable to defend their freedom, and the state should see

98 PLATO'S POLITICS

that all educational facilities are available to everybody. But too much state control in educational matters is a fatal danger to freedom, since it must lead to indoctrination. As already indicated, the important and difficult question of the limitations of freedom cannot be solved by a cut and dried formula.
And the fact that there will always be borderline cases must be welcomed, for without the stimulus of political struggles of this kind, the citizens' readiness to fight for their freedom would soon disappear, and with it, their freedom. (Viewed in this light, the alleged clash between freedom and security, that is, a security guaranteed by the state, turns out to be a chimera. For there is no freedom if it is not secured by the state; and conversely, only a state which is controlled by free citizens can offer them any reasonable security at all.)

Stated in this way, the protectionist theory of the state is free from any elements of historicism or essentialism. It does not Dimply that the state originated as an association of individuals with a protectionist aim; nor does it imply that any actual state in history was ever consciously ruled in accordance with this aim. It says nothing about the true nature of the state, nor about the natural right to freedom. Nor does it maintain anything about the way in which states actually function. It formulates a political demand. I suspect, however, that many conventionalists who have described the state as originated from an association for the protection of its members, intended to express this very demand, though they did it in a clumsy and misleading way. A similar misleading way of expressing this demand is to assert that it is essentially the function of the state to protect its members; or to assert that the state is to be defined
as an association for mutual protection. All these theories must be translated, as it were, into the language of demands for political actions before they can be seriously discussed. Otherwise, endless discussions of a merely verbal character are unavoidable.

An example of such a translation may be given. A certain typical criticism of what I call protectionism, has been proffered by Aristotle and repeated by Burke, and by many modern Platonists. This criticism maintains that protectionism takes too mean a view of the tasks of the state which is (using Burke's words) *to be looked upon with other reverence, because it is not a partnership in things subservient only to the gross animal existence of a temporary and perishable nature*. In other words, the state is something higher or nobler than an association with rational ends; it is an object of worship. It has higher tasks than the protection of human beings and their rights. It has moral tasks. c To take care of virtue is the business of a state which truly deserves this name*, says Aristotle. If we now try to translate this criticism into the language of political demands, then we find that these people want two things. First, they wish to make the state an object of worship. From our point of view, there is nothing to say against this wish. It is a religious problem, and the state-worshippers must solve for
themselves how they can reconcile their creed with the First Commandment.
The second demand is political. In practice, this demand would simply mean that officers of the state should be concerned with the morality of the citizens, and that they should use their power not so much for the protection of the people as for the control of their moral life. In other words, it is the demand that the realm of legality, i.e. of state-enforced norms, should be increased at the expense of the realm of morality proper, i.e. of norms enforced not by the state but by our own moral decisions. But those who raise such demands apparently do not see that this would be the end of the individual's moral responsibility, and that it would not improve but destroy all morality. It would replace personal responsibility by tribalistic taboos and by the totalitarian irresponsibility of the individual. Against this whole attitude, the individualist must maintain that the morality of states (if there is any such thing) tends to be considerably lower than that of the average citizen, so that it is much more desirable that the morality of the state should be controlled by the citizens than the opposite. What we need and what we want is to moralize politics, and not to politicize morals. *

It should be mentioned that from the protectionist point of view, the existing democratic states, though far from perfect, represent a very considerable achievement in social engineering of the right kind. Many forms of crime, of attack on the rights of human individuals by other individuals, have been
practically suppressed or very considerably reduced, and courts of law administer justice fairly successfully in difficult conflicts of interest. There are many who think that the extension of these methods to international crime and international conflict is only a Utopian dream; but it is not so long since the institution of an effective executive for upholding civil peace appeared Utopian to those who suffered under the threats of criminals, in countries where at present civil peace is quite successfully maintained. And I

IOO PLATO S POLITICS

think that the engineering problems of the control of international crime are really not so difficult, once they are squarely and rationally faced. If the matter is presented clearly, it will not be hard to get people to agree that protective institutions are necessary, both on a regional and on a world-wide scale. Let the state-worshippers continue to worship the state, but demand that the institutional technologists be allowed not only to improve its internal machinery, but also to build up an organization for the prevention of international crime.

Returning now to the history of these movements, it seems that the protectionist theory of the state was first proffered by the Sophist Lycophron, a pupil of Gorgias. It has already been mentioned that he was (like Alcidamas, also a pupil of Gorgias) one of the first to attack the theory of natural
privilege. That he held the theory I call protectionism is recorded by Aristotle, who speaks about him in a manner which makes it very likely that he originated it. From the same source we learn that he formulated it with a clarity which has hardly been attained by any of his successors.

Aristotle tells us that Lycophron considered the law of the state as a * covenant by which men assure one another of justice ' (and that it has not the power to make citizens good or just). He tells us furthermore that Lycophron looked upon the state as an instrument for the protection of its citizens against acts of injustice (and for permitting them peaceful intercourse, especially exchange), demanding that the state should be a cooperative association for the prevention of crime '. It is interesting that there is no indication in Aristotle's account that Lycophron expressed his theory in a historicist form, i.e. as a theory concerning the historical origin of the state in a social contract. On the contrary, it emerges clearly from Aristotle's context (for he argues that it is rather the essential end of the state to make its citizens virtuous) that Lycophron's theory was solely concerned with the end of the state. And we see that he interpreted this end rationally, from a technological point of view, adopting the demands of equalitarianism, individualism, and protectionism.

In this form, Lycophron's theory is completely secure from the objections to which the traditional historicist
theory of the social contract is exposed. It has been often maintained, for instance by Barker 46, that the contract theory has been met by modern thinkers point by point. That may be so; but a survey of Barker's points will show that they certainly do not meet the theory of Lycophron, in whom Barker like myself sees the probable founder of the earliest form of a theory which has later been called the contract theory. Barker's points can be set down as follows: (a) There was, historically, never a contract; (b) the state was, historically, never instituted; (c) laws are not conventional, but arise out of tradition, superior force, perhaps instinct, etc.; they are customs before they become codes; (d) the strength of laws does not lie in the sanctions, in the protective power of the state which enforces them, but in the individual's readiness to obey them, i.e. in the individual's moral will.

It will be seen at once that objections (a), (b), and (c), although in themselves quite true, concern the theory only in its historicist form and are irrelevant to Lycophron's version. We therefore need not consider them at all. Objection (d), however, deserves closer consideration. What can be meant by it? The theory attacked stresses the 'will', or better the decision of the individual, more than any other theory; in fact, the
word
' contract ' suggests an agreement by c free will '.
The only explanation of Barker's objection seems to me that he does not think the contract to spring from the * moral will ' of the individual, but rather from a selfish will ; and this interpretation is the more likely as it is in keeping with Plato's criticism. But one need not be selfish to be a protectionist. Protection need not mean self-protection ; many people insure their lives with the aim of protecting others and not themselves, and in the same way they may demand state protection mainly for others, and to a lesser degree for themselves. The fundamental idea of protectionism is: protect the weak from being bullied by the strong. This demand has been raised not only by the weak, but often by the strong also. It is, to say the least of it, misleading to suggest that it is a selfish or an immoral demand.

Lycophron's protectionism is, I think, free of all these objections. It is the most fitting expression of the humanitarian and equalitarian movement of the Periclean age. And yet, we have been robbed of it. It has been handed down to later generations only in a distorted form; as the historicist theory of the origin of the state in a social contract; or as an essentialist theory claiming that the true nature of the state is that of a convention; and as a theory of selfishness, based on the assumption of the fundamentally immoral nature of man. All this is due to the overwhelming influence of Plato's authority.
There can be little doubt that Plato knew Lycophron's theory well, for he was (in all likelihood) Lycophron's younger contemporary. And, indeed, this theory can be easily identified with one which is mentioned first in the Gorgias and later in the Republic. (In neither place does Plato mention its author; a procedure often adopted by him when his opponent was alive.) In the Gorgias, the theory is expounded by Callicles, an ethical nihilist like the Thrasygambachus of the Republic. In the Republic, it is expounded by Glaucon. In neither case does the speaker identify himself with the theory he presents.

The two passages are in many respects parallel. Both present the theory in a historicist form, i.e. as a theory of the origin of *justice*. Both present it as if its logical premises were necessarily selfish and even nihilistic; i.e. as if the protectionist view of the state would be maintained only by those who would like to inflict injustice, but are too weak to do so, and who therefore demand that the strong should not do so either; a presentation which is certainly not fair, since the only necessary premise of the theory is the demand that crime, or injustice, should be suppressed.

So far, the two passages in the Gorgias and in the Republic run parallel, a parallelism which has often been commented upon. But there is a tremendous difference between them which has,
so far as I know, been overlooked by commentators. It is this.
In the Gorgias, the theory is presented by Callicles as one which he opposes; and since he also opposes Socrates, the protec jomst theory is, by implication, not attacked but rather defended by Plato. And, indeed, a closer view shows that Socrates upholds several of its features against the nihilist Callicles. But in the Republic, the same theory is presented by Glaucon as an elaboration and development of the views of Thrasymachus, i.e. of the nihilist who takes here the place of Callicles; in other words, the theory is presented as nihilist, and Socrates as the hero who victoriously destroys this devilish doctrine of selfishness.

Thus the passages in which most commentators find a similarity between the tendencies of the Gorgias and the Republic reveal, in fact, a complete change of front. In spite of Callicles' hostile presentation, the tendency of the Gorgias is rather favourable to protectionism; but the Republic is violently against it.

Here is an extract from Callicles' speech in the Gorgias * 7 :

* The laws are made by the multitude, which consists of the weak men. And they make the laws . . in order to protect themselves and their interests. Thus they deter the stronger men . .

CHAPTER 6 I TOTALITARIAN JUSTICE 103

and generally those who might get the better of them, from doing
so; . . and they mean by the word "injustice" the attempt of a man to get the better of his neighbours; and being aware of their inferiority, they are, I should say, only too glad if they can obtain equality. 5 If we look at this account and eliminate what is due to Callicles' open scorn and hostility, then we find all the elements of Lycophron's theory: equalitarianism, individualism, and protection against injustice. Even the reference to the 'strong' and to the 'weak' who are aware of their inferiority fits the protectionist view very well indeed, provided the element of caricature is allowed for. It is not at all unlikely that Lycophron's doctrine explicitly raised the demand that the state should protect the weak, a demand which is, of course, anything but ignoble. (The hope that this demand will one day be fulfilled is expressed by the Christian teaching: e The meek shall inherit the earth.')

Callicles himself does not like protectionism; he is in favour of the 'natural' rights of the stronger. It is very significant that Socrates, in his argument against Callicles, comes to the rescue of the protectionist theory, and that he even identifies it with his own theory that it is better to suffer injustice than to inflict it. He says, for instance 48: 'Are not the many of the opinion, as you were lately saying, that justice is equality? And also that it is more disgraceful to inflict than to suffer it?' And later: c Then nature itself, and not only convention, affirms that to inflict injustice is more disgraceful than to suffer it, and
that justice is equality.' (In spite of its individualistic and
equalitarian and protectionist tendencies, the Gorgias has strongly
anti-democratic features too. The explanation may be that Plato
when writing the Gorgias had not yet developed his totalitarian
theories; although his sympathies were already anti-
democratic, he was still under Socrates' influence. How anybody can think
that the Gorgias and the Republic can be both at the same time
ture accounts of Socrates' opinions, I fail to understand.)

Let us now turn to the Republic, where Glaucon presents protectionism as a logically more stringent but ethically un-
changed version of Thrasymachus' nihilism. ' My theme ', says
Glaucon 49 , c is the origin of justice, and what sort of thing it
really is. According to some, to inflict injustice upon others is
by nature an excellent thing, and to suffer injustice is bad. But
the badness of suffering injustice much exceeds the desirability
of inflicting it. For a time, then, men will inflict injustice on

one another, and of course suffer it, and they will get a good
taste of both. But ultimately, those who are not strong enough
to repel it, or to enjoy inflicting it, decide that it is more profitable
for them to join in a contract, mutually assuring one another that
no one should inflict injustice, or suffer it. This is the way in
which laws were established .. And this is the nature and
the origin of justice, according to that theory.'

As far as its rational content goes, this is clearly the same theory; and the way in which it is represented also resembles in detail 50 Callicles' speech in the Gorgias. And yet, Plato has made a complete change of front. The protectionist theory is now no longer defended against the allegation that it is based on cynical egoism; on the contrary. Our humanitarian sentiments, our moral indignation, already aroused by Thrasymachus 5 nihilism, are utilized for turning us into enemies of protectionism. This theory whose humanitarian character has been indicated in the Gorgias, is now made by Plato to appear as anti-humanitarian, and indeed, as the outcome of the repulsive and un plausible doctrine that injustice is a very good thing for those who can get away with it. And he does not hesitate to rub this point in. In an extensive continuation of the passage quoted, Glaucon elaborates in much detail the alleged premises of protectionism, showing that it assumes, for instance, that the inflicting of injustice is c the best of all things ' 51; and that justice is established only because many men are too weak to commit crimes, and that to the individual citizen, a life of crime would be most profitable. And ' Socrates ', i.e. Plato, vouches explicitly 52 for the authen- ticity of Glaucon's interpretation of the theory presented. By this method, Plato seems to have succeeded in persuading most of his readers, and at any rate all Platonists, that the protectionist theory here developed is identical with the ruthless
and cynical selfishness of Thrasymachus; and, -what is more important, that all forms of individualism amount to the same, namely, selfishness. But it was not only his admirers he persuaded; he even succeeded in persuading his opponents, and especially all the adherents of the contract theory. From Carneades to Hobbes, they not only adopted his fatal historicist presentation, but also Plato's assurances that the basis of their theory is an ethical nihilism.

Now it must be realized that the elaboration of its allegedly selfish basis is the whole of Plato's argument against protectionism; and considering the space taken up by this elaboration, we may

CHAPTER 6 : TOTALITARIAN JUSTICE

safely assume that it was not his reticence which made him proffer no better argument, but the fact that he had none. Thus protectionism had to be dismissed simply as an affront against the idea of justice, and against our feelings of decency.

This is Plato's method of dealing with a theory which was not only a dangerous rival of his own doctrine but a representative of the new humanitarian and individualistic creed, i.e. the arch-enemy of everything that was dear to Plato. The method is clever; its astonishing success proves it. But I should not be fair if I did not frankly admit that Plato's method appears to me dishonest. For the theory attacked does not need any
assumption
more immoral than that injustice is evil, i.e. that it should be
avoided, and brought under control. And Plato knew quite well
that the theory was not based on selfishness, for in the Gorgias he
had presented it not as identical with the nihilistic theory from
which it is derived ' in the Republic, but as opposed to it.

Summing up, we can say that Plato's theory of justice, as
presented in the Republic and later works, is a conscious attempt
to get the better of the equalitarian, individualistic, and pro-
tectionist tendencies of his time, and to re-establish the claims of
tribalism by developing a totalitarian moral theory. At the
same time, he was strongly impressed by the new humanitarian
morality; but instead of combating equalitarianism, he avoided
even discussing it. And he successfully enlisted the humanitarian
sentiments, whose strength he knew so well, in the cause of the
totalitarian class rule of a naturally superior master race.

These class prerogatives, he claimed, are necessary for upholding the stability of the state. They constitute therefore the essence
of justice. Ultimately, this claim is based upon the argument
that justice is useful to the might, health, and stability of the
state; an argument which is only too similar to the modern
totalitarian definition: right is whatever is useful to the might
of my nation.

But this is not yet the whole story. By its emphasis on class
prerogative, Plato's theory of justice puts the problem 'Who should rule?' in the centre of political theory. His reply to this question was that the wisest, and the best, should rule. Does this reply not modify the character of his theory?

CHAPTER 7: THE PRINCIPLE OF LEADERSHIP

Certain objections to our interpretation of Plato's political programme as purely totalitarian and based on historicism, have forced us into an investigation of the part played, within this programme, by such moral ideas as Justice, Goodness, Beauty, Wisdom, Truth, and Happiness. The present and the next chapters are to deal mainly with the political part played by these ideas in Plato's philosophy, the present mainly with Wisdom.

We have seen that Plato's idea of justice demands, fundamentally, that the natural rulers should rule and the natural slaves should slave. This is part of the historicist demand that the state, in order to arrest all change, should copy its Idea, or true * nature *. This theory of justice indicates very clearly that Plato saw the fundamental problem of politics in the question: Who shall rule the state?

It is my conviction that by expressing the problem of politics in the form 'Who should rule?' or 'Whose will should be supreme?', etc., Plato created a lasting confusion in political philosophy. It is indeed analogous to the confusion he created in the field of moral philosophy by his identification,
discussed in the last chapter, of collectivism and altruism. It is clear that once the question 'Who should rule?' is asked, it is hard to avoid some such reply as 'the best' or 'the wisest' or *the born rulers' (or, perhaps, *The People' or cThe General Will' or *The Master Race' or *The Industrial Workers'). But such a reply, convincing as it may sound for who would advocate the rule of 'the worst' or 'the stupid' or *the born slave'? is, as I shall try to show, quite useless.

First of all, such a reply is liable to persuade us that some fundamental problem of political theory has been solved. But if we approach political theory from a different angle, then we find that far from solving any fundamental problems, we have merely skipped over them, by assuming that the question 'Who should rule?' is fundamental. For even those who share this assumption of Plato's admit that political rulers are not always sufficiently *good* or *wise* (we need not worry about the precise meaning of these terms), and that it is not at all easy to get a government on whose goodness and wisdom one can implicitly rely. If that is granted, then we must ask whether

1 06

CHAPTER 7 : LEADERSHIP 107

political thought should not face from the beginning the possibility of bad government; whether we should not prepare for the
worst leaders, and hope for the best. But this leads to a new approach to the problem of politics, for it forces us to replace the question: Who should rule? by the new question: How can we organize political institutions so that bad or incompetent rulers can be prevented from doing too much damage?

Those who believe that the older question is fundamental, tacitly assume that political power is 'essentially' unchecked. They assume that someone has the power either an individual or a collective body, such as a class. And they assume that he who has the power can, very nearly, do what he wills, and especially that he can strengthen his power, and thereby approximate it further to an unlimited or unchecked power. They assume that political power is, essentially, sovereign. If this assumption is made, then, indeed, the question *Who is to be the sovereign?* is the only important question left.

I shall call this assumption the theory of sovereignty, using this expression not for any particular one of the various theories of sovereignty, proffered more especially by such writers as Bodin, Rousseau, or Hegel, but for the more general assumption that political power is practically unchecked, or for the demand that it ought to be so; together with the implication that the main question left is to get this power into the best hands. This theory of sovereignty is tacitly assumed in Plato’s approach, and has played its role ever since. It is also implicitly assumed, for instance, by those modern writers who believe that the
main problem is: Who should dictate? The capitalists or the workers?

Without entering into a detailed criticism, I wish to point out that there are serious objections against a rash and implicit acceptance of this theory. Whatever its speculative merits may appear to be, it is certainly a very unrealistic assumption. No political power has ever been unchecked, and as long as men remain human (as long as the 'Brave New World' has not materialized), there can be no absolute and unrestrained political power. So long as one man cannot accumulate enough physical power in his hands to dominate all others, just so long must he depend upon his helpers. Even the most powerful tyrant depends upon his secret police, his henchmen and his hangmen. This dependence means that his power, great as it may be, is not unchecked, and that he has to make concessions, playing one group off against another. It means that there are other political forces, other powers besides his own, and that he can exert his rule only by utilizing and pacifying them. This shows that even the extreme cases of sovereignty are never cases of pure sovereignty. They are never cases in which the will or the interest of one man (or, if there were such a thing, the will or the interest of one group) can achieve his aim directly, without
giving up some of it in order to enlist powers which he cannot
conquer. And in an overwhelming number of cases, the
limitations of political power go much further than this.

I have stressed these empirical points, not because I wish to
use them as an argument, but merely in order to avoid objections.
My claim is that every theory of sovereignty omits to face a more
fundamental question the question, namely, whether we should
not strive towards institutional control of the rulers by balancing
their powers against other powers. This balance theory can at
least claim careful consideration. The only objections to this
claim, as far as I can see, are (a) that such a control is practically
impossible, or (b) that it is essentially inconceivable since political
power is essentially sovereign 3 . These dogmatic objections are,
I believe, refuted by the facts (and with them, for instance, the
theory that the only alternative to the dictatorship of one class
is that of another class).

In order to raise the question of institutional control of the
rulers, we need not assume more than that governments
are not always good or wise. But since I have said something about
historical facts, I think I should confess that I feel inclined to go a
little beyond this assumption. I am inclined to think that rulers
have rarely been above the average, either morally or intel-
lectually, and often below it. And I think that it is reasonable
to adopt, in politics, the principle of preparing as well as we can
for the worst, though we should, of course, at the same
time try
to get the best. It appears to me madness to base all
our political
efforts upon the faint hope that we shall be successful
in obtaining
excellent, or even competent rulers. Strongly as I feel
in these
matters, I must insist, however, that my criticism of
the theory
of sovereignty does not depend on these more personal
opinions.

Apart from these empirical arguments against the
general
theory of sovereignty, there is also a kind of logical
argument
which can be used to show the inconsistency of any of
the partic-
ular forms of the theory of sovereignty; more
precisely, the
logical argument can be given different but analogous
forms to
combat the theory that the wisest should rule, or else
the theories

CHAPTER 7 ! LEADERSHIP 109

that the ruler should be the best, or the law, or the
majority, etc.
One particular form of this logical argument that is
directed
against a too naive version of liberalism, of
democracy, and of
the principle that the majority should rule, is
somewhat similar
to the well-known 'paradox of freedom'. It has been
used first,
and with success, by Plato. In his criticism of
democracy, and
in his story of the rise of the tyrant, Plato raises
implicitly the
following question: What if it is the will of the
people that they
should not rule, but a tyrant instead? The free man,
Plato
suggests, may exercise his absolute freedom, first by
defying the
laws and ultimately by defying freedom itself, and by clamouring for a tyrant. This is not just a far-fetched possibility; it has happened a number of times; and every time it happens, it puts those democrats who adopt the principle of majority rule or a similar form of the principle of sovereignty as the ultimate basis of their political creed in a hopeless intellectual position. On the one hand, their principle induces them to oppose any but the majority rule, and therefore the new tyranny; on the other hand, the same principle induces them to accept any decision of the majority, and thus the rule of the new tyrant. The inconsistency of their theory must, of course, paralyse their actions. We democrats who demand the institutional control of the rulers by the public, including the right of dismissing the government by majority vote, must therefore base these demands upon better grounds than a self-contradictory theory of sovereignty. (And, indeed, it is not difficult to formulate a consistent theory of democratic control.)

But in an exactly analogous way, it can be shown that any other particular form of the theory of sovereignty may also give rise to similar inconsistencies. All theories of sovereignty are paradoxical. For instance, we may have selected 'the wisest' or 'the best' as a ruler. But 'the wisest' may find in his wisdom that not he, but 'the best' should rule, and 'the best' may perhaps decide in his goodness that 'the majority' should rule. It is important to notice that even that form of the theory
of sovereignty which demands the 'Kingship of the Law' is open to the same objection. In fact, this has been seen very early, as Heraclitus' remark 7 shows: 'The law can demand, too, that the will of One Man must be obeyed.'

In summing up this brief criticism, one can, I believe, assert that the theory of sovereignty is both empirically and logically in a rather weak position. The legist that can be demanded is that

110 PLATOS POLITICS

it must not be adopted without careful consideration of other arguments.

Returning to Plato, we find that by his emphasis upon the problem *who should rule*, he implicitly assumed the general theory of sovereignty. The question of an institutional control of the rulers, and of an institutional balancing of their powers, is thereby eliminated without ever having been raised. The interest is shifted from institutions to questions of personnel, and the most urgent problems becomes the selection of natural leaders, and their training for leadership.

In view of this fact some people think that in Plato's theory the welfare of the state is ultimately an ethical and spiritual matter, depending on persons and personal responsibility rather than on the construction of impersonal institutions. I believe that this view of Platonism is superficial. All long-
term politics is institutional. There is no escape from that, not even for Plato. The principle of leadership does not replace the institutional problems by problems of personnel, it only creates new institutional problems. As we shall see, it even burdens the institutions with a task which goes beyond what can be reasonably demanded from a mere institution, namely, with the task of selecting the future leaders. It would be therefore a mistake to think that the opposition between the balance theory and the theory of sovereignty corresponds to that between institutionalism and personalism. And Plato's principle of leadership is far removed from a pure personalism since it involves the working of institutions. Indeed, it may be said that a pure personalism is impossible. But it must be said that a pure institutionalism is impossible too.

Not only does the construction of institutions involve important moral decisions, but the functioning of even the best institutions will always depend, to a considerable degree, on its personnel. Institutions are like fortresses. They must be well designed and manned.

This is often misunderstood by the critics of democracy. Democracy provides the institutional framework for the reform of political institutions (other than this framework). It makes possible the reform of institutions without using violence, and thereby the use of reason in the designing of new institutions and the adjusting of old ones. It cannot provide reason. The question of the intellectual and moral standard of its
citizens is
to a large degree a personal problem. (The idea that
this problem
can be tackled, in turn, by an institutional eugenic
and educa-

CHAPTER 7 : LEADERSHIP 1 1 1
tional control is, I believe, mistaken; some reasons
for my
belief will be given below.) It is quite wrong to blame
democracy
for the political shortcomings of a democratic state.
We should
rather blame ourselves. In a non-democratic state, the
only
way to achieve reasonable reforms is by the violent
overthrow
of the government, and the introduction of a democratic frame-
work. Those who criticize democracy on any ' moral '
grounds
fail to distinguish between personal and institutional
problems.
It rests with us to improve matters. The democratic
institutions
cannot improve themselves. The problem of improving
them is
always a problem of persons rather than of
institutions. But
if we want improvements, we must make clear which
institutions
we want to improve.

There is another distinction within the field of
political
problems, corresponding to that between persons and
institutions.
There is always the problem of the day and the problem
of the
future. While the problems of the day are largely
personal, the
building of the future must necessarily be
institutional. If the
political problem is approached by asking c Who should
rule ',
and if Plato's leader-principle is adopted, that is to
say, the principle that the best should rule, then the problem of the future must take the form of designing institutions for the selection of future leaders.

This is one of the most important problems in Plato's theory of education. In approaching it I do not hesitate to say that Plato utterly corrupted and confused the theory and practice of education by linking it up with his theory of leadership. The damage done is, if possible, even greater than that inflicted upon ethics by the identification of collectivism with altruism, and upon political theory by the introduction of the principle of sovereignty. Plato's assumption that it should be the task of education (or more precisely, of the educational institutions) to select the future leaders, and to train them for leadership, is still largely taken for granted. By burdening these institutions with a task which must go beyond the scope of any institution, Plato is partly responsible for their deplorable state. But before entering into a general discussion of his view of the task of education, I wish to develop, in more detail, his theory of leadership, the leadership of the wise.

I think it most likely that this theory of Plato's owes a number of features to the influence of Socrates. One of the fundamental tenets of Socrates was, I believe, his moral intellectualism. By
this I understand (a) his identification of goodness and wisdom, 
his theory that nobody acts against his better knowledge, and that 
lack of knowledge is responsible for all moral mistakes; (b) his 
theory that moral excellence can be taught, and that it does not 
presuppose any particular moral faculties, apart from the 
universal human intelligence. Socrates was a moralist and an 
enthusiast. He was the type of man who would criticize any 
form of government for its shortcomings (and indeed, such 
criticism would be necessary and useful for any government, although it is possible only under a democracy) but he recognized 
the importance of being loyal to the laws of the state. As it happened, he spent his life largely under a democratic form of 
government, and as a good democrat he found it his duty to 
expose the incompetence and windbaggery of some of the democratic leaders of his time. At the same time, he opposed any form of tyranny; and if we consider his courageous behaviour under the Thirty Tyrants, then we have no reason to assume that his criticism of democratic leaders was inspired by anti-democratic leanings. He only demanded that the moral level both of the citizens and of their leaders should be improved by education and enlightenment. It is not unlikely that he also demanded (like Plato) that the best should rule, which would have meant, in his view, the wisest, or those who knew something about justice. But we must remember that by justice he meant equalitarian justice (as indicated by the
passages from the Gorgias quoted in the last chapter), and that he was not only an equalitarian but also an individualist perhaps the greatest apostle of an individualistic ethics of all times. And we must also be clear that if he demanded that the wisest should rule, he clearly stressed that he did not mean the learned men; in fact, he was sceptical of all professional learnedness, whether it was that of the philosophers of the past or of the learned men of his own generation, the Sophists. The wisdom he meant was of a different kind. It was simply the realization: how little do I know! Those who do not know this, he taught, know nothing at all. (This is the true scientific spirit. Some people still think, as Plato did when he had established himself as a learned Pythagorean, that Socrates’ agnostic attitude must be explained by the lack of success of the science of his day. But this only shows that they do not understand this spirit, and that they are still possessed by the pre-Socratic magical attitude towards science, and towards the scientist, whom they consider as a somewhat glorified shaman, as wise, learned, initiated. They judge him by the amount of knowledge in his possession, instead of taking, with Socrates, his awareness of what he does not know as a measure of his scientific level as well as of his intellectual honesty.)
It is important to see that this Socratic intellectualism is decidedly equalitarian. Socrates believed that everyone can be taught; in the Meno, we see him teaching a young slave a version 10 of the now so-called theorem of Pythagoras, in an attempt to prove that any uneducated slave has the capacity to grasp even abstract matters. And his intellectualism is also anti-authoritarian. While a technique, for instance rhetoric, may perhaps be dogmatically taught by an expert, real knowledge, wisdom, and also virtue, can be taught only by a method described by Socrates as a form of midwifery. Those eager to learn may be helped to free themselves from their prejudice; thus they may learn self-criticism, and that truth is not easily attained. But they may also learn to make up their mind, and to rely, critically, on their decisions, and on their insight. In view of such teaching, it is clear how much the Socratic demand (if he ever raised this demand) that the best, i.e. the intellectually honest, should rule, differs from the authoritarian demand that the most learned, or from the aristocratic demand that the best, i.e. the most noble, should rule. (Socrates' belief that even courage is wisdom can, I think, be interpreted as a direct criticism of the aristocratic doctrine of the nobly born hero.)

But this moral intellectualism of Socrates is a two-edged sword. It has its equalitarian and democratic aspect, which was later developed by Antisthenes. But it has also an aspect
which may give rise to strongly anti-democratic
tendencies. Its
stress upon the need for enlightenment, for education, might
easily be misinterpreted as a demand for
authoritarianism. This
is connected with a question which seems to have puzzled
Socrates a great deal: that those who are not sufficiently
educated, and thus not wise enough to know their
deficiencies,
are just those who are in the greatest need of education. Readi-
ness to learn in itself proves the possession of
wisdom, in fact all
the wisdom claimed by Socrates for himself; for he who is ready
to learn knows how little he knows. The uneducated
seems thus
to be in need of an authority to wake him up, since he cannot
be expected to be self-critical. But this one element
of authori-
tarianism was wonderfully balanced in Socrates' teaching by the

emphasis that the authority must not claim more than that.
The true teacher can prove himself only by exhibiting that self-
criticism which the uneducated lacks. ' Whatever authority I
may have rests solely upon my knowing how little I know
3: this is the way in which Socrates might have justified his mission
to stir up the people from their dogmatic slumber. This educational mission he believed to be also a political mission.
He felt that the way to improve the political life of the city was
to educate the citizens to self-criticism. In this sense he claimed
to be ' the only politician of his day ' 11 > in
opposition to those
others who flatter the people instead of furthering
their true
interests.

This Socratic identification of his educational and
political
activity could easily be distorted into the Platonic
and Aristotelian
demand that the state should look after the moral life
of its
citizens. And it can easily be used for a dangerously
convincing
proof that all democratic control is vicious. For how
can those
whose task it is to educate be judged by the uneducated?
How
can the better be controlled by the less good? But
this argument
is, of course, entirely un-Socratic. It assumes an
authority of
the wise and learned man, and goes far beyond Socrates'
modest
idea of the teacher's authority as founded solely on
his con-
sciousness of his own limitations. State-authority in
these
matters is liable to achieve, in fact, the exact
opposite of Socrates'
aim. It is liable to produce dogmatic self-satisfaction
and
massive intellectual complacency, instead of critical
dissatisfaction
and eagerness for improvement. I do not think that it
is
unnecessary to stress this danger which is seldom
clearly realized.
Even an author like Grossman, one of the few, I
believe, who
understood the true Socratic spirit, agrees 12 with
Plato in what
he calls Plato's third criticism of Athens: *
Education, which should
be the major responsibility of the State, had been left
to individual
caprice... Here again was a task which should be
entrusted
only to the man of proven probity. The future of any
State
depends on the younger generation, and it is therefore madness to allow the minds of children to be moulded by individual taste and force of circumstances. Equally disastrous had been the State's laissez faire policy with regard to teachers and school-masters and sophist-lecturers.' 13 In reply, I may perhaps emphasize, first of all, that, as long as it lasted, the Athenian state's laissez faire policy, criticized by Grossman, had the invaluable result of enabling certain sophist-lecturers to teach,

CHAPTER 7 | LEADERSHIP 115

and especially the greatest of them all, Socrates. And when this policy was dropped later on, the result was Socrates' death. This should be a clear warning that state control in such matters is dangerous, and that the cry for the 'man of proven probity' may easily lead to the suppression of the best. (Bertrand Russell's recent suppression is a case in point.) But as far as basic principles are concerned, we have here an instance of the deeply rooted prejudice that the only alternative to laissez faire is full state responsibility. I believe it is certainly the responsibility of the state to give its citizens an education which enables them to cope with the demands of life, and furthermore, to proceed to a scientific training (should this be desirable); and the state should certainly also see (as Grossman rightly stresses) that the lack of an individual's capacity to pay 'should not debar him
from higher studies. This, I believe, belongs to the state's protective functions. To say, however, that 'the future of the state depends on the younger generation, and that it is therefore madness to allow the minds of children to be moulded by individual taste *', appears to me to open wide the door to totalitarianism. State interest must not be lightly invoked to defend measures which may endanger the most precious of all forms of freedom, namely, intellectual freedom. And although I am far from recommending * laissez faire with regard to teachers and schoolmasters ', I believe that this policy is infinitely superior to an authoritative policy that gives officers of the state full powers to mould the minds, and to control the teaching of science, thereby backing the dubious authority of the expert by that of the state, ruining science by the customary practice of teaching it as an authoritative doctrine, and destroying the scientific spirit of inquiry, the spirit of the search for truth, as opposed to possession.

I have tried to show that Socrates' intellectualism is fundamentally equalitarian and individualistic, and that the element of authoritarianism which it involved was reduced to a minimum by Socrates' intellectual modesty and his scientific attitude. Very different from this is the intellectualism of Plato. The Platonic * Socrates ' of the Republic 14 is the embodiment of an unmitigated authoritarianism.. (Even his self-deprecating remarks are not Based upon awareness of his limitations, but are rather an ironical
way of asserting his superiority.) His educational aim is not the awakening of self-criticism and of critical thought in general. It is, rather, indoctrination, the moulding of minds which are

(to repeat a quotation from the Laws 15 ) * by long habit . . to become utterly incapable of doing anything at all independently '. And Socrates' great equalitarian and liberating idea that it is possible to reason with a slave, and that there is an intellectual link between man and man, a medium of universal understanding, namely, * reason ', this idea is replaced by a demand for an educational monopoly of the ruling class, coupled with the strictest censorship, even of oral debates.

Socrates had stressed that he was not wise ; that he was not in the possession of truth or wisdom, but that he was a searcher, an inquirer, a lover of truth and wisdom. This, he explained, is expressed by the word * philosopher ' as opposed to c Sophist ' (i.e. the professionally wise man). Whenever he claimed that statesmen should be philosophers, he meant that, burdened with an excessive responsibility, they should be searchers for truth, conscious of their limitations.

How did Plato convert this doctrine ? At first sight, it might appear that he did not alter it at all, when demanding that the sovereignty of the state should be invested in the philosophers ;
especially since, like Socrates, he defined philosophers as lovers of truth. But the change made by Plato is indeed tremendous. His lover is no longer the modest pecker, he is the proud possessor of truth. A trained dialectician, he is capable of intellectual intuition, i.e. of seeing the eternal, the heavenly Forms or Ideas. Placed high above all ordinary men, he is c god-like, if not . . . divine', i.e., both in his wisdom and in Tils power. The ideal philosopher approaches both to omniscience and to omnipotence. He is the Philosopher-King. It is hard, I think, to conceive a greater contrast than that between the Socratic and the Platonic ideal of a philosopher. It is the contrast between two worlds the worlds of the modest, rational individualist and of the totalitarian demi-god.

Plato's demand that the wise man should rule, the possessor of truth, the * fully qualified philosopher ' 17 , raises, of course, the problem of selecting and educating the rulers. In a purely personalist (as^ opposed to an institutional) theory, this problem might be solved simply by declaring that the wise ruler will in his wisdom be wise enough to determine the best successor. But this is not a very satisfactory approach to the problem. Too much would depend on uncontrolled circumstances; an accident may destroy the future stability of the state. But the attempt to control circumstances, to foresee what might happen and to
provide for it, must lead here, as everywhere, to the replacement of a purely personalist solution by an institutional one. As mentioned above, the attempt to plan for the future must always lead to institutionalism.

The institution which according to Plato has to look after the future leaders can be described as the educational department of the state. It is, from a purely political point of view, by far the most important institution within Plato's society. It holds the keys to power. For this reason alone it should be clear that at least the higher grades of education are to be directly controlled by the rulers. But there are some additional reasons for this. The most important is that only *the expert and . . . the man of proven probity*, as Grossman puts it, which in Plato's view means only the very wisest adepts, that is to say, the rulers themselves, can be entrusted with the final initiation of the future sages into the higher mysteries of wisdom. This holds, above all, for dialectics, i.e. the art of intellectual intuition, of visualizing the divine originals, the Forms or Ideas, of unveiling the Great Mystery behind the common man's everyday world of appearances.

What are Plato's institutional demands regarding this highest form of education? They are rather remarkable. He demands that only those who are past their prime of life should be admitted.

'When their bodily strength begins to fail, and when
they are
past the age of public and military duties, then, and
only then,
should they be permitted to enter at will the sacred
field. . .' 18
namely, the field of dialectical studies. Plato's
reason for this
amazing rule is clear enough. He is afraid of the power
of
thought. ' All great things are dangerous ' 19 is the
remark by
which he introduces the confession that he is afraid of
the effect
which philosophic thought may have upon brains which
are not
yet on the verge of old age. (All this he puts into the
mouth
of Socrates, who died in defence of his right of free
discussion
with the young.) But this is exactly what we should
expect if
we remember Plato's fundamental interest, namely the
arrestment
of political change. In their youth, the members of the
upper
class shall fight. When they are too old to think, they
shall
become dogmatic students to be imbued with wisdom and
authority in order to become sages themselves and to
hand on
their wisdom, the doctrine of collectivism and
authoritarianism,
to future generations.

It is interesting that in a later and more elaborate
passage

n8 PLATO'S POLITICS

which attempts to paint the rulers in the brightest
colours, Plato
modified his suggestion. Now 20 he allows the future
sages to
begin their dialectical studies at the age of thirty, stre
ssing, of
course, that c those to whom the use of arguments may be
permitted must possess disciplined and well-balanced natures' 21. 
This alteration certainly helps to brighten the picture, but the fundamental tendency is the same.

It is clear enough that Plato does not wish his leaders to have originality or initiative. He hates change and does not want to see that re-adjustments may become necessary. But this explanation of Plato's attitude does not go deep enough. In fact, we are faced here with a fundamental difficulty of the leader principle. The very idea of selecting or educating future leaders is self-contradictory. You may solve the problem, perhaps, to some degree in the field of bodily excellence. Physical initiative and bodily courage are perhaps not so hard to ascertain. But the secret of intellectual excellence is the spirit of criticism; it is intellectual independence. And this leads to difficulties which must prove insurmountable for any kind of authoritarianism. The authoritarian will select in general those who obey, who believe, who respond to his influence. But in doing so, he selects mediocrities. For he excludes those who revolt, who doubt, who dare to resist his influence. Never can an authority admit that the intellectually courageous, i.e. those who dare to defy his authority, may be the most valuable type. Of course, the authorities will always remain convinced of their ability to detect initiative. But what they mean by this is only a quick grasp of their intentions, and they will remain for ever incapable of seeing the difference. (Here we may
perhaps penetrate the secret of the particular difficulty of selecting capable military leaders. The demands of military discipline enhance the difficulties discussed, and the methods of military advancement are such that those who do dare to think for themselves are usually eliminated. Nothing is less true, as far as intellectual initiative is concerned, than the idea that those who are good in obeying will also be good in commanding. Very similar difficulties arise in political parties: the "man Friday" of the party leader is seldom a capable successor.)

We are led here, I believe, to a result of some importance, which can be generalized. Institutions for the selection of the outstanding can hardly be devised. Institutional selection may work quite well for such purposes as Plato had in mind, namely

CHAPTER 7: LEADERSHIP

for the arrestment of change. But it will never work well if we demand more than that, for it will always tend to eliminate initiative and originality. This is not a criticism of political institutionalism. It only re-affirms what has been said before, that we should always prepare for the worst leaders, although we should try, of course, to get the best. But it is a criticism of the tendency to burden institutions, especially educational institutions, with the impossible task of selecting the best. This should never be made their task. This tendency transforms our
educational system into a race-course, and turns the course of studies into a hurdle-race. Instead of encouraging the student to devote himself to his studies for the sake of studying, instead of encouraging in him a real love for his subject and for inquiry, the student is encouraged to study for the sake of his personal career; he is led to acquire only such knowledge as is serviceable in getting him over the hurdles which he must clear for the sake of his advancement. In other words, even in the field of science, our methods of selection are based upon an appeal to personal ambition. (It is a natural reaction to this appeal if the eager student is looked upon with suspicion by his colleagues.) The impossible demand for an institutional selection of the intellectual leaders endangers the very life not only of science, but of intelligence.

It has been said, only too truly, that Plato was the inventor of both our secondary schools and our universities. I do not know a better argument for an optimistic view of mankind, no better proof of their indestructible love for truth and decency, of their originality and stubbornness and health, than the fact that this devastating system of education has not utterly ruined them. In spite of the treachery of so many of their leaders, there are quite a number, old as well as young, who are decent, and intelligent, and devoted to their task. 'I sometimes wonder how it was that the mischief done was not more clearly perceptible, 9
says Samuel Butler 24, ' and that the young men and women
grew up as sensible and goodly as they did, in spite of
the attempts
almost deliberately made to warp and stunt their
growth. Some
doubtless received damage, from which they suffered to
their
life's end; but many seemed little or none the worse, and some
almost the better. The reason would seem to be that the
natural
instinct of the lads in most cases so absolutely
rebelled against
their training, that do what the teachers might they
could never
get them to pay serious heed to it.'

120 PLATO'S POLITICS

It may be mentioned here that Plato proved a bad
selector
of leaders. I have in mind not so much the
disappointing
outcome of his experiment with Dionysius II, tyrant of
Syracuse,
but rather the participation of Plato's Academy in
Dio's successful
expedition against Dionysius. Plato selected certain
members of
the Academy to support his famous friend Dio. One of
those
selected was Callipus, who became Dio's most trusted
comrade.
Callipus murdered Dio (who had made himself tyrant of
Syracuse)
and usurped the tyranny, which he lost after thirteen
months.
But this event was not the only one of its kind in
Plato's career
as a teacher. Clearchus, one of Plato's (and of
Isocrates')
disciples, made himself tyrant of Heraclea after having
posed as a
democratic leader. He was murdered by his relation,
Chion,
another member of Plato's Academy. (We cannot know how
Chion, whom some represent as an idealist, would have developed, since he too was killed.) These experiences of Plato's throw light on the additional difficulties of the selection of men who are to be invested with absolute power. There are few whose character is not corrupted by it. As Lord Acton says: all power corrupts, and absolute power corrupts absolutely.

To sum up. Plato's political programme was much more institutional than personalist; he hoped to arrest political change by the institutional control of succession in leadership. The control was to be educational, based upon an authoritarian view of learning, and upon the authority of the learned expert. This is what Plato made of Socrates' demand that a responsible politician should love truth, and that he should know his limitations.

CHAPTER 8 : THE PHILOSOPHER KING

The contrast between the Platonic and the Socratic creed is even greater than I have shown so far. Plato, I have said, followed Socrates in his definition of the philosopher.* Whom do you call true philosophers? Those who love truth ', we read in the Republic *. But he himself is not truthful when he makes this statement. He does not really believe in it, for he declares in other places rather bluntly that it is one of the royal privileges, of the sovereign to make full use of lies and deceit: ' It is the business of the rulers of the city, if it is anybody's, to tell lies! deceiving both its enemies and its own citizens for the
benefit of the city; and no one else must touch this privilege. 5 2

* For the benefit of the city ', says Plato. Again we find that the appeal to the principle of collective utility is the ultimate ethical consideration. Totalitarian morality overrules everything, even the definition, the Idea, of the philosopher. It need hardly be mentioned that, by the same principle of political expediency, the ruled are to be forced to tell the truth. c If the ruler catches anyone else in a lie . . then he will punish him for introducing a practice which injures and endangers the city. . .' 3. Only in this slightly unexpected sense is Plato's philosopher king a lover of truth.

Plato illustrates this application of his principle of collective utility to the problem of truthfulness by the example of the physician. The example is well chosen, since Plato likes to visualize his political mission as one of healing the sick body of society. Apart from this, the role which he assigns to medicine throws light upon the totalitarian character of Plato's city where state interest dominates the life of the citizen from the mating of his parents to his grave. Plato interprets medicine as a form of politics or, as he puts it himself, he * regards Aesculapius, the god of medicine, as a politician ' *. Medical art, he explains, must not consider the prolongation of life as its aim, but only the interest of the state. c In all properly ruled communities, each man has his particular work in the state assigned to
him. This he must do, and no one has time to spend his life in being ill and being cured.' Accordingly, the physician has * no right to treat a man who cannot carry out his ordinary duties, for such a man is useless to himself and to the state ; quite apart from the consideration that he might have ' children who would probably be as sick' as their father, and become a burden to the state.

(In his old age, Plato discussed medicine, in spite of his increased hatred of individualism, in a much more personal vein. He complains of the doctor who treats even free citizens as if they were slaves, ' issuing his orders like a tyrant whose will is law, and then rushing off to the next slave-patient ' 5 , and he pleads for more gentleness and patience in medical treatment, at least for those who are not slaves.) Concerning the use of lies and deceit, Plato urges that these are c useful only as a medicine ' 6 ; but the ruler of the state, Plato insists, must not behave like some of those ' ordinary doctors ' who have not the courage to administer strong medicines. The philosopher king, a lover of truth as a philosopher, must be, as a king, ' a more courageous man ' since he must be determined * to administer a great many lies and deceptions ' for the benefit of the ruled, Plato hastens to* add.

Which means, as we already know, and as we learn here again...
from Plato's reference to medicine, for the benefit of the state.
(Kant remarked once in a very different spirit that the sentence
' Truthfulness is the best policy ' might indeed be questionable,
whilst the sentence ' Truthfulness is better than policy ' is beyond
dispute 7 .)

What kind of lies has Plato in mind when he exhorts his rulers
to use strong medicine? Grossman rightly emphasizes that
Plato means ' propaganda, the technique of controlling the
behaviour of . . . the bulk of the ruled majority ' 8 .
Certainly, Plato had these first in his mind; but when Grossman
suggests that the propaganda lies were only intended for the consumption
of the ruled, while the rulers should be a fully enlightened intelligentsia, then I cannot agree. I think, rather, that Plato's complete break with anything resembling Socrates' intellectualism is nowhere more obvious than in the place where he twice expresses his hope that even the rulers themselves, at least after a few generations, might be induced to believe his greatest propaganda lie;
I mean his racialism, his Myth of Blood and Soil, usually referred to as the Myth of the Earthborn. Here we see that Plato's utilitarian and totalitarian principles overrule everything, even the ruler's privilege of knowing, and of demanding to be told, the truth. The motive of Plato's wish that the rulers themselves should believe in the propaganda lie is his hope of increasing its wholesome effect, i.e. of strengthening the rule of the master race, and ultimately, of arresting all political change.
Plato introduces his Myth of Blood and Soil rather cynically:

"Well then," says the Socrates of the Republic, "could we perhaps fabricate one of those very handy lies which indeed we mentioned just recently? With the help of one single inspired white lie we may, if we are lucky, persuade even the rulers themselves but at any rate the rest of the city." It is interesting to note the use of the term "persuade". To persuade somebody to believe a lie means, more precisely, to mislead or to hoax him; and it would be more in tune with the frank cynicism of the passage to translate "we may, if we are lucky, hoax even the rulers themselves". But Plato uses the term "persuasion" very frequently, and its occurrence here throws some light on other passages. It may be taken as a warning that in similar passages, he may have propaganda lies in his mind; more especially where he advocates that the statesman should rule by means of both persuasion and force.

After announcing his "inspired lie," Plato, instead of proceeding directly to the Myth, first develops a lengthy preface, rather similar to the lengthy preface which precedes his discovery of justice; an indication, I think, of his uneasiness. It seems that he did not expect the proposal which follows to find much favour with his readers. The Myth itself introduces two ideas. The first is the defence of the mother country.
This is certainly not the reason for Plato's hesitation (although the word- ing of the dialogue cleverly suggests it). The second idea, however, 'the rest of the story', is the myth of racialism: *God has put gold into those who are capable of ruling, silver into the auxiliaries, and iron and copper into the peasants and the other producing classes.' 11 These metals are hereditary; they are racial characteristics. In this passage, in which Plato, hesitantly, first introduces his racialism, he allows for the possibility that children may be born with an admixture of another metal than those of their parents; and it must be admitted that he here announces the following rule: if in one of the lower classes * children are born with an admixture of gold and silver, they shall . . . be appointed guardians, and . . . auxiliaries '. But this concession is rescinded in later passages, especially in the story of the Fall of Man and of the Number 12, partially quoted in chapter 5 above. From this passage we learn that any admixture of a lower metal must be excluded from the higher classes. The possibility of admixtures and corresponding changes in status means therefore only that the degenerate children from

the upper classes are to be pushed down, not that those of the lower classes may be lifted up. The way in which any mixing of metals must lead to destruction, is described in the concluding
passage of the story of the Fall of Man: Iron will mingle with silver and bronze with gold, and from this mixture variation will be born and absurd irregularity; and whenever these are born they will beget struggle and hostility. And this is how we must describe the origin of disunion..." 13. It is in this light that we must consider that the Myth of the Earthborn concludes with the cynical fabrication of a prophecy by a fictitious oracle c that the city must perish when guarded by iron and copper * 14. Plato's reluctance to proffer his racialism at once in its more radical form indicates, I suppose, that he knew how much it was against the democratic and humanitarian tendencies of his time.

If we consider Plato's blunt admission that his Myth of Blood and Soil is a propaganda lie, then the attitude of the commentators towards the Myth is somewhat puzzling. Adam, for instance, writes: "Without it, the present sketch of a state would be incomplete. We require some guarantee for the permanence of the city...; and nothing could be more in keeping with the prevailing moral and religious spirit of Plato's... education than that he should find that guarantee in faith rather than in reason." 16 I agree (though this is not quite what Adam meant) that nothing is more in keeping with Plato's totalitarian morality than his advocacy of propaganda lies. But I do not understand how the idealistic commentator, by implication, can declare that religion and faith are on the level of an opportunist lie. As a matter of fact, Adam's comment is reminiscent of Hobbes'
conventionalism,
of the attitude that religion, although not true, is a
most expedient
and indispensable political device. And this
consideration shows
us that Plato, after all, was more of a conventionalist
than one
might think. He does not even stop short of
establishing a
religious faith * by convention ' (we must credit him
with the
frankness of his admission that it is only a
fabrication), while
the conventionalist Protagoras at least believed that
the laws,
which are our making, are made with the help of divine
inspiration. It is hard to understand why those commentators
16 on
Plato who praise him for fighting against the
subversive con-
ventionalism of the Sophists and for establishing a
spiritual
naturalism ultimately based on religion, fail to
censure him for
making a convention, or rather an invention, the
ultimate basis
of religion. In fact, Plato's attitude towards religion
as revealed

CHAPTER 8 t THE PHILOSOPHER KINO 125

by his c inspired lie ' is practically identical with
that of Critias,
his beloved uncle, the brilliant leader of the Thirty
Tyrants who
established an inglorious blood-regime in Athens after
the
Peloponnesian war. Critias, a poet, was the first to
glorify
propaganda lies whose invention he described in cynical
verses
eulogizing that wise and cunning man who fabricated
religion, in
order to c persuade ' the people, i.e. to threaten them
into
submission :
Then came, I think, that wise and cunning man, who fabricated myths, and piety. He knew the ways of daunting heart and soul. And lawlessness turned into law and order.

In Critias' view, religion is only the inspired lie of a great and clever statesman. Plato's views are strikingly similar, both in the cynical introduction of the Myth in the Republic, and in the Laws where he says that the installation of rites and of gods is a matter for a great thinker. But is this the whole truth about Plato's religious attitude? Was Plato only an opportunist in these matters, and was the very different spirit of his earlier works merely Socratic? There is of course no way of deciding this question with certainty, though I feel, intuitively, that there may sometimes be a more genuine religious feeling expressed even in the later works. But I believe that wherever Plato considers religious matters in their relation to politics, his political opportunism sweeps everything aside. Thus Plato demands, in the Larfs, the severest punishment even for honest and honourable people if their opinion concerning the gods deviates from those held by the state. Their souls are to be treated by a Nocturnal Council of inquisitors, and if they do not recant or if they repeat the offence, the charge of impiety means death. Has he forgotten Socrates who had fallen a victim to that very charge?

That it is mainly state interest which inspires these demands rather than interest in the religious faith as such,
can be gauged by Plato's central religious doctrine. The gods, he teaches in the Laws, punish severely all those on the wrong side in the conflict between good and evil, a conflict which is explained as that between collectivism and individualism. And the gods, he insists, take an active interest in men, they are not merely spectators. It is impossible to appease them. Neither through prayers nor through sacrifices can they be moved to abstain from punishment.

Plato's opportunism and his theory of lies makes it, of course, difficult to interpret what he says. How far did he believe in his theory of justice? How far did he believe in the truth of the religious doctrines he preached? Was he perhaps himself an atheist, in spite of his demand for the punishment of other (lesser) atheists? Although we cannot hope to answer any of these questions definitely, it is, I believe, difficult, and methodologically unsound, not to give Plato at least the benefit of the doubt. And the fundamental sincerity of his belief in the need for arresting change can hardly, I think, be questioned. (I shall
return to this in chapter 10.) On the other hand, we cannot doubt that Plato subjects the Socratic love of truth to the more fundamental principle that the rule of the master class must be strengthened.

It is interesting, however, to note that Plato's theory of truth is slightly less radical than his theory of justice. Justice, we have seen, is defined, practically, as that which serves the interest of his totalitarian state. It would have been possible, of course, to define the concept of truth in the same utilitarian fashion. The Myth is true, Plato could have said, since anything that serves the interest of my state must be believed and therefore must be called *true*; and there must be no other criterion of truth.

In theory, an analogous step has actually been taken by the pragmatist successors of Hegel; in practice, it has been taken by Hegel himself and his racialist successors. But Plato retained enough of the Socratic spirit to admit candidly that he was lying.

The step taken by the school of Hegel was one that could never have occurred, I think, to any companion of Socrates.

So much for the role played by the Idea of Truth in Plato's best state. But apart from Justice and Truth, we have still to consider some further Ideas, such as Goodness, Beauty, and Happiness, if we wish to remove the objections, raised in chapter 6, against our interpretation of Plato's political programme as a pure totalitarianism, based on historicism. An approach to the
discussion of these Ideas, and also to that of Wisdom, which has
been partly discussed in the last chapter, can be made by con-
sidering the somewhat negative result reached by our
discussion
of the Idea of Truth. For this result raises a new
problem:

CHAPTER 8 I THE PHILOSOPHER KING 127

Why does Plato demand that the philosophers should be
kings
or the kings philosophers, if he defines the
philosopher as a lover
of truth, insisting, on the other hand, that the king
must be
/more courageous/, and use lies?
The only reply to this question is, of course, that
Plato has,
in fact, something very different in mind when he uses
the term
* philosopher '. And indeed, we have seen in the last
chapter
that Jiis philosopher is not so much the seeker for, as
the possessor
of wisdom. He is a learned man, a sage. What Plato
demands,
therefore, is the rule of learnedness sophocracy, if I
may say so.
In order to understand this demand, we must try to find
what
kind of functions make it desirable that the ruler of
Plato's state
should be a possessor of knowledge, a c fully qualified
philosopher ',
as Plato says. The functions to be considered can be
divided into
two main groups, namely those connected with the
foundation of
the state, and those connected with its preservation.
The first and the most important function of the
philosopher
kmgjisj that of the city's founder and lawgiver. For
this purpose,
a philosopher is clearly needed. If the state is to be stable, then it must be a true copy of the divine Form or Idea of the State. But only a philosopher who is fully proficient in the highest of sciences, in dialectics, is able to see, and to copy, the heavenly Original. This point receives much emphasis in the part of the Republic in which Plato develops his arguments for the sovereignty of the philosophers. Philosophers love to see the truth, and a real lover always loves to see the whole, not merely the parts. Thus he does not love, as ordinary people do, sensible things and their 'beautiful sounds and colours and shapes', but he wants to see, and to admire the real nature of beauty 'the Form or Idea of Beauty. In this way, Plato gives the term philosopher a new meaning, that of a lover and a seer of the divine world of Forms or Ideas. As such, the philosopher is the man who may become the founder of a virtuous city: The philosopher who has communion with the divine 'may be overwhelmed by the urge to realize.. his heavenly vision', of the ideal city and of its ideal citizens. He is like a draughtsman or a painter who has 'the divine as his model'. Only true philosophers can * sketch the ground-plan of the city', for they alone can see the original, and can copy it, by * letting their eyes wander to and fro, from the model to the picture, and back from the picture to the model'.

As * a judge of constitutions, the philosopher must be helped by the light of goodness and of wisdom. A few remarks
Plato's Idea of the Good is the highest in the hierarchy of Forms. It is the sun of the divine world of Forms or Ideas, which not only throws light on all the other members, but is the source of their existence. It is also the source or cause of all knowledge and all truth. The power of seeing, of appreciating, of knowing the Good is thus indispensable to the dialectician. Since it is the sun and the source of light in the world of Forms, it enables the philosopher-painter to discern his objects. Its function is therefore of the greatest importance for the founder of the city.

But this purely formal information is all we get. Plato's Idea of the Good nowhere plays a more direct ethical or political role; never do we hear which deeds are good, or produce good, apart from the well-known collectivist moral code whose precepts are introduced without recourse to the Idea of Good. Remarks that the Good is the aim, that it is desired by every man, do not enrich our information. This empty formalism is still more marked in the Philebus, where the Good is identified with the Idea of 'measure' or 'mean'. And when I read the report that Plato, in his famous lecture 'On the Good', disappointed an uneducated audience by defining the Good as 'the
class of
the determinate conceived as a unity ', then my
sympathy is
with the audience. In the Republic, Plato says frankly
32 that he
cannot explain what he means by * the Good '. The only
practical suggestion we get is that mentioned at the
beginning of
chapter 4 : that Good is that which preserves, which
does not
decay ; it is the unchangeable, the arrested state of a
thing. In
view of all this, the argument that he believed in an
Absolute
Good is, I believe, no valid objection against the
interpretation
of his political theory as totalitarian, and as
opportunist.

The analysis of Plato's Idea of Wisdom leads to equally
dis-appointing results. Wisdom, as we have seen, does not
mean to
Plato the Socratic insight into one's own limitations ;
nor does it
mean what most of us would expect, a warm interest in,
and a
helpful understanding of, humanity and human affairs.
Plato's
wise men, highly preoccupied with the problems of a
superior
world 33 , ' have no time to look down at the affairs
of men . . ;
they look upon, and hold fast to, the ordered and the
measured *.
It is the right kind of learning that makes a man wise
: c Philo-
sophic natures are lovers of that kind of learning
which reveals
to them a reality which exists for ever and does not
drift from

CHAPTER 8 : THE PHILOSOPHER KING I2Q

generation to degeneration.' It does not seem that
Plato's
treatment of wisdom can carry us beyond the ideal of
arresting
change.

Although this analysis of the functions of the city's founder has not revealed any new ethical elements in Plato's doctrine, it has shown that there is a definite reason why the founder of the city must be a philosopher. But this does not fully justify the demand for the permanent sovereignty of the philosopher. It would only justify the philosopher as the first lawgiver, not as the permanent ruler, especially since none of the later rulers must introduce any change. For a full justification of the demand that the philosophers should rule, we must therefore proceed to analyse the tasks connected with the city's preservation.

We know from Plato's sociological theories that the state, once established, will continue to be stable as long as there is no split in the unity of the master class. The bringing up of that class is, therefore, the great preserving function of the sovereign, and a function which must continue as long as the state exists. How far does it justify the demand that a philosopher must rule? To answer this question, we distinguish again, within this function, between two different activities: the supervision of education, and the supervision of breeding.

Why should the director of education be a philosopher? Why is it not sufficient, once the state and its educational system are established, to put an experienced general, a soldier-king, in charge of it? The answer that the educational system
must provide not only soldiers but philosophers, and therefore needs philosophers as well as soldiers as supervisors, is obviously unsatisfactory; for if no philosophers were needed as directors of education and rulers, then there would be no need for the educational system to produce new ones. The requirements of the educational system cannot as such justify the need for philosophers in Plato's state, or the postulate that the rulers must be philosophers. This would be different, of course, if Plato's education had an individualistic aim, apart from its aim to serve the interest of the state, namely, the aim to develop philosophical faculties for their own sake. But when we see, as we did in the last chapters, how frightened Plato was of permitting anything like independent thought, then we realize that this cannot be the explanation. And this impression is strengthened if we remember chapter 4, where we have seen that Plato also demanded restrict-

130 PLATO'S POLITICS

which Plato attaches to a philosophical education of the rulers must be explained by other reasons which are purely political.

The main reason I can see is the need for increasing to the utmost the authority of the rulers. If the education of the auxiliaries functions properly, there will be plenty of good soldiers. Outstanding military faculties may therefore be insuffi-
cient to establish an unchallenged and unchallengeable authority. This must be based on higher claims. Plato bases it upon the claims of supernatural, mystical powers which he develops in his leaders. They are not like other men. They belong to another world, they communicate with the divine. Thus the philosopher king seems to be, partly, a copy of a tribal priest-king, an institution which we have mentioned in connection with Heraclitus. (The institution of tribal priest-kings or medicine-men or shamans seems also to have influenced the old Pythagorean sect, with their amazingly naive tribal taboos. Most of these had apparently been dropped even before Plato. But the claim to a supernatural basis of their authority remained.) Thus Plato's philosophical education has a definite political function. Itjrtamps the rulers ? and it establishes a barrier between the rulers and the rulecL (This has remained a major function of c higher 'education down to our own time.) Platonic wisdom is acquired largely for the sake of establishing a permanent political class rule. It can be describee! as political * medicine ', giving mystic powers to its possessors, the medicine-men.^ 4 .

But this cannot be the full answer to our question of the functions of the philosopher in the state. It means, rather, that the question why a philosopher is needed has only been shifted, and that we would have now to raise the analogous question of the practical political functions of the shaman or the medicine-man. Plato must have had some definite aim when he
devised his specialized philosophic training. We must look for a permanent function of the ruler, analogous to the temporary function of the lawgiver. The only hope of discovering such a function seems to be in the field of breeding the master race.

Racialism thus takes up a more central part in Plato's political programme; would expect at first sight. Just as the Platonic racial or nuptial number is, as we know, the culmination of his descriptive sociology, * the setting in which Plato's Philosophy of History is framed ' (Adam), so it is the setting of Plato's practical demand for the sovereignty of the philosophers. After what has been said in chapter 4 about the nomadic background

CHAPTER 8 I THE PHILOSOPHER KING 131

of Plato's state, it is perhaps not so unexpected to find that his king is a breeder king. But it may perhaps surprise some that his philosopher turns out to be a philosophic breeder. The need for scientific, for mathematico-dialectical and philosophical breeding is not the least of the arguments behind the claim for the sovereignty of the philosophers. .

It has been shown in chapter 4 how the problem of obtaining a pure breed of human watch-dogs is emphasized and elaborated in the earlier parts of the Republic. But so far we have not met with any reason why only a genuine and fully qualified philo-
sopher should be a proficient and successful political breeder. And yet, as every breeder of dogs or horses or birds knows, rational breeding is impossible without a pattern, an aim to guide him in his efforts, an ideal which he may try to approach by the methods of mating and of selecting. Without such a standard, he could never decide which offspring is * good enough '; he could never speak of the difference between ' good offspring ' and * bad offspring '. But this standard corresponds exactly to a Platonic Idea of the race which he intends to breed.

Just as only the true philosopher, the dialectician, can see, according to Plato, the divine original of the city, so it is only the dialectician who can see that other divine original the Form or Idea of Man. Only he is capable of copying this model, of calling it down from Heaven to Earth 35 , and of realizing it here. It is a kingly Idea, this Idea of Man. It does not, as some have thought, represent what is common to all men ; it is not the universal concept ' man '. It is, rather, the godlike original of man, an unchanging superman ; it is a super-Greek, and a super-master. The philosopher must try to realize on earth what Plato describes as the race of the most constant, the most virile, and, within the limits of possibilities, the most beautifully formed men . . : nobly born, and of awe-inspiring character ' 36 . It is to be a race of men and women who are c godlike if not divine . . sculptured in perfect beauty ' 37 a lordly race, destined by nature to kingship and mastery.
We see that the two fundamental functions of the philosopher king are analogous: he has to copy the divine original of the city, and he has to copy the divine original of man. He is the only one who is able, and who has the urge, 'to realize, in the individual as well as in the city, his heavenly vision' 38.

Now we can understand why Plato drops his first hint that a more than ordinary excellence is needed in his rulers at the same place where he first claims that the principles of animal breeding must be applied to the race of men. We are, he says, most careful in breeding animals. 'If you did not breed them in this way, don't you think that the race of your birds or your dogs would quickly degenerate?' When inferring from this that man must be bred in the same careful way/ Socrates' exclaims: c Good heavens! . . . What surpassing excellence we shall have to demand from our rulers, if the same principles apply to the race of men? ' z9 This exclamation is significant; it is one of the first hints that the rulers may constitute a class of *surpassing excellence' with status and training of their own; and it thus prepares us for the demand that they ought to be philosophers. But the passage is even more significant in so far as it directly leads to Plato's demand that it must be the duty of the rulers, as doctors of the race of men, to administer lies and
Lies are necessary, Plato maintains, 'if your herd is to reach highest perfection'; for this needs arrangements that must be kept secret from all but the rulers, if we wish to keep the herd of guardians really free from disunion'. Indeed, the appeal (quoted above) to the rulers for more courage in administering lies as a medicine, is made in this connection; it prepares the reader for the next demand, considered by Plato as particularly important. He wishes that the rulers should fabricate, for the purpose of mating the young auxiliaries, 'an ingenious system of balloting, so that the persons who have been disappointed... may blame their bad luck, and not the rulers', who are, secretly, to engineer the ballot. And immediately after this despicable advice for dodging the admission of responsibility (by putting it into the mouth of Socrates, Plato libels his great teacher), 'Socrates' makes a suggestion which is soon taken up and elaborated by Glaucon and which we may therefore call the Glauconic Edict. I mean the brutal law which imposes on everybody of either sex the duty of submitting, for the duration of a war, to the wishes of the brave: *As long as the war lasts,... nobody may say "No" to him. Accordingly, if a soldier wishes to make love to anybody, whether male or female, this law will make him more eager to carry off the price of valour.*'

The state, it is carefully pointed out, will thereby obtain two distinct benefits: more heroes, owing to the incitement, and again more
heroes, owing to the increasing number of children from heroes.
(The latter benefit, as the most important from the point of view
of a long-term racial policy, is put into the mouth of
*Socrates*).

CHAPTER 8 : THE PHILOSOPHER KINO 133

No special philosophical training is required for this kind of
breeding. Philosophical breeding, however, plays its main part
in counteracting the dangers of degeneration. In order to fight
these dangers, a fully qualified philosopher is needed, i.e. one
who is trained in pure mathematics (including solid geometry),
pure astronomy, pure harmonics, and, the crowning achievement
of all, in dialectics. Only he who knows the secrets of mathe-
matical eugenics, of the Platonic Number, can bring back to
man, and preserve for him, the happiness enjoyed before the
Fall 43. All this should be borne in mind when, after the
announcement of the Glauconic Edict (and after an interlude
dealing with the natural distinction between Greeks and
Barbarians, corresponding, according to Plato, to that between
masters and slaves), the doctrine is enunciated which Plato
carefully marks as his central and most sensational political
demand the sovereignty of the philosopher king. This demand
alone, he teaches, can put an end to the evils of social life; to
the evil rampant in states, i.e. political instability, as well as to its
more hidden cause, the evil rampant in the members of the race'
of men, i.e. racial degeneration. This is the passage:
c Well ', says Socrates, ' I am now about to dive into
that topic
which I compared before to the greatest wave of all.
Yet speak
out I must, although I foresee that this will bring
upon me a
deluge of laughter. Indeed, I can see it now, this very
wave,
breaking over my head into an uproar of laughter and
defama-
tion . . .' ' Out with the story ! ' says Glaucon. *

Unless ', says
Socrates, c unless, in the cities, philosophers are
invested with
the might of kings, or those now called kings and
oligarchs
become genuine and fully qualified philosophers, and
unless these
two, political might and philosophy, are merged (while
the many
who nowadays follow their natural inclination for one,
but only
for one of these two, are suppressed by force), unless
this happens,
my dear Glaucon, there will be no respite, and evils
will not cease
to be rampant in the cities nor, I believe, in the race
of men.' 44
(To which Kant wisely replied : ' That kings should
become
philosophers, or philosophers kings, is not likely to
happen;
nor would it be desirable, since the possession of
power invari-
ably debases the free judgement of reason. It is,
however, indis-
ensible that a king, or a kingly, i.e. self-ruling
people, should
not suppress philosophers but leave them the right of
public
utterance.' 45 )

The last words of this Platonic passage, which has been quite
appropriately described as the key to the whole work, ' nor, I believe, in the race of men ', are, I think, an afterthought of comparatively minor importance in this place. It is, however, necessary to comment upon them, since the idealization of Plato has led to the interpretation 46 that Plato speaks here about * humanity ', extending his promise of salvation from the scope of the cities to that of * mankind as a whole '. It must be said, in this connection, that the ethical category of * humanity ' as something that transcends the distinction of nations, races, and classes, is entirely foreign to Plato. In fact, we have sufficient evidence of Plato's hostility towards the equalitarian creed, a hostility which is seen in his attitude towards Antisthenes 47 , an old disciple and friend of Socrates. Antisthenes also belonged to the school of Gorgias, like Alcidamas and Lycophron, whose equalitarian theories he seems to have extended into the doctrine of the brotherhood of all men, and of the universal empire of men. 48 This creed is attacked in the Republic by correlating the natural inequality of Greeks and Barbarians to that of masters and slaves 49 ; and it so happens that this attack is launched immediately before the key-passage we are here considering. For these and other reasons 50 , it seems safe t8 assume that Plato, when speaking of the evils rampant in the race of men, alluded to a theory with which his readers would be sufficiently acquainted at this place, namely, to his theory that the welfare of the state
depends, ultimately, upon the 'nature' of the individual members of the ruling class; and that their nature, and the nature of their race, or offspring, is threatened, in turn, by the evils of an indivi-
dualistic education, and, more important still, by racial degenera-
tion. The remark is thus an allusion which foreshadows also the story of the Number and the Fall of Man 61.

It is very appropriate that Plato should allude to his racialism in the enunciation of his most important political demand. For without the *genuine and fully qualified philosopher*, trained in all those sciences which are prerequisite to eugenics, the state is lost. In his story of the Number and the Fall of Man, Plato tells us that one of the first and fatal sins of omission committed by the degenerate guardians will be their loss of interest in eugenics, in watching and testing the purity of the race: "Hence rulers will be ordained who are altogether unfit for their task as guardians; namely, to watch, and to test, the metals in the races (which are Hesiod's races as well as yours), gold and silver and bronze and iron." 62

CHAPTER 8 I THE PHILOSOPHER KING 135

It is ignorance of the mysterious nuptial Number which leads to all that. But the Number was undoubtedly Plato's own invention. (It presupposes pure harmonics which in turn presuppose solid geometry, a new science at the time when the Republic was written.) Thus we see that nobody but Plato him-
self held the key to true guardianship. But this can
mean only one thing. The philosopher king is Plato himself, and the Republic is Plato's own claim for kingly power.

Once this conclusion has been reached, many things which otherwise would remain unrelated become connected and clear.

It can hardly be doubted, for instance, that Plato's work, full of allusions as it is to contemporary problems and characters, was meant by its author not so much as a theoretical treatise, but as a topical political manifesto. ' We do Plato the gravest of wrongs ', says A. E. Taylor, ' if we forget that the Republic is no mere collection of theoretical discussions about government . . but a serious project of practical reform put forward by an Athenian . ., set on fire, like Shelley, with a " passion for reforming the world 'V 53 This is undoubtedly true, and we could have concluded from this consideration alone that in his portrait of the Philosopher King, Plato must have had some contemporary in mind. But in the days when the Republic was written, there were in Athens only three outstanding men who might have claimed to be philosophers: Antisthenes, Isocrates, and Plato himself. If we approach the Republic with this in mind, we find at once that there is a lengthy passage, in the discussion of the characteristics of the philosopher king, which is clearly marked out by Plato as containing personal allusions. It begins 54 with an unmistakable reference to a popular character, namely Alcibiades, and ends by openly mentioning a name (that of Theages), and with a reference of ' Socrates ' to
himself 55. Its upshot is that only very few can be described as true philosophers, eligible for the post of philosopher king. The nobly born Alcibiades who was of the right type, deserted philosophy, in spite of Socrates' attempts to save him. Deserted and defenceless, philosophy was claimed by unworthy suitors. Ultimately, there is left only a handful of men who are worthy of being associated with philosophy. From the point of view we have reached, we would have to expect that the unworthy suitors are Antisthenes and Isocrates and their school (and that they are the same people whom Plato demands to have 'suppressed by force', as he says in the key-passage of the philosopher king).

136 PLATO'S POLITICS

And, indeed, there is some independent evidence corroborating this expectation 56. Similarly, we should expect that the handful of men who are worthy 'includes Plato and his friends, and, indeed, a continuation of this passage leaves little doubt that Plato speaks here of himself: 'Those who belong to this small band . . . can all see the madness of the many, and the general corruption of all political affairs. The philosopher . . . is like a man in a cage of wild beasts. He will not share the injustice of the many, but his power does not suffice for continuing his fight alone, surrounded as he is by a world of savages. He would be killed before he could do any good, to his city or his
friends... Having duly considered all these points, he will hold his peace, and confine his efforts to his own work." 57. The strong resentment expressed in these sour and most un-Socratic 58 words marks them clearly as Plato's own. For a full appreciation, however, of this personal confession, it must be compared with the following: *It is not in accordance with nature that the skilled navigator should beg the unskilled sailors to accept his command; nor, that the wise man should wait at the doors of the rich... But the true and natural procedure is that the sick, whether rich or poor, should hasten to the doctor's door. Likewise should those who need to be ruled besiege the door of him who can rule; and never should a ruler beg them to accept his rule, if he is any good at all." 59 Who can miss the sound of an immense personal pride in this passage? Here am I, says Plato, your natural ruler, the philosopher king who knows how to rule. If you want me, you must come to me, and if you insist, I may become your ruler. But I shall not come begging to you.

Did he believe that they would come? Like many great works of literature, the Republic shows traces that its author experienced exhilarating and extravagant hopes of success, alternating with periods of despair. Sometimes, at least, Plato hoped that they would come; that the success of his work, the fame of his wisdom, would bring them along. Then again, he felt that they would only be incited to furious attacks
; that all he would bring upon himself was a wave of laughter and defamation ' perhaps even death.

Was he ambitious? He was reaching for the stars for god-likeness. I sometimes wonder whether part of the enthusiasm for Plato is not due to the fact that he gave expression to many secret dreams 80 . Even where he argues against ambition, we

CHAPTER 8 : THE PHILOSOPHER KING 137

cannot but feel that he is inspired by it. The philosopher, he assures us 61 , is not ambitious; although c destined to rule, he is the least eager for it '. But the reason given is that his status is too high. He who has had communion with the divine may descend from his heights to the mortals below, sacrificing himself for the sake of the interest of the state. But as a natural ruler he is ready to come. The poor mortals need him. Without him the state must perish, for only he knows the secret of arresting degeneration. . .

I think we must face the fact that behind the sovereignty of the philosopher king stands the quest for power. The beautiful portrait of the sovereign is a self-portrait. When we have recovered from the shock of this revelation, we may look anew at the awe-inspiring portrait, and if we can fortify ourselves with a small dose of Socrates' irony, then we may cease to find it so terrifying. We may begin to discern its human, indeed, its only too human features. We may even begin to feel a
l little
sorry for Plato who had to be satisfied with
establishing the first
professorship, instead of the first kingship, of
philosophy; who
could never realize his dream, the kingly Idea which he had
formed after his own image. Fortified by our dose of irony, we
may even find, in Plato's story, a melancholy resemblance to
that innocent little satire on Platonism, the story of the Ugly
Dachshund, of Tono, the Great Dane, who forms his kingly Idea
of a Great Dog ' after his own image (but happily finds in the end that he is Great Dog himself) 62.

What a monument of human smallness is this idea of the philosopher king. How far removed it is from the simple humaneness of Socrates, from the Socratic demand that the responsible statesman should not be dazzled by his own excellence, power, or wisdom, but that he should know what matters most: that we are all frail human beings. What a distance from this world of irony and truthfulness and reason, to Plato's kingdom of the sage, whose magical powers raise him high above ordinary men; but not high enough to forgo the use of lies, nor to neglect the sorry game of all shamans, the sale of taboos of breeding taboos for power over his fellow-men.

CHAPTER 9 : AESTHETICISM, RADICALISM, UTOPIANISM

Inherent in Plato's programme there is a certain approach towards politics which is, I believe, most dangerous. Its analysis is of great practical importance from the point of view
of rational social engineering. The Platonic approach I have in mind can be called Utopian engineering, as opposed to that kind of social engineering which alone I consider as rational, and which may be described by the name of piecemeal engineering. The Utopian approach is the more dangerous as it may seem to be the obvious alternative to a radical historicism which implies that we cannot alter the course of history; at the same time, it appears to be a necessary complement to a less radical historicism, like that of Plato, which permits human interference.

The Utopian approach may be described as follows. Any rational action must have a certain aim. It is rational in the same degree as it pursues its aim consciously and consistently, and as it determines its means according to this end. To choose the end is therefore the first thing we have to do if we wish to act rationally; and we must be careful to determine our real or ultimate ends, from which we must distinguish clearly those intermediate or partial ends which actually are only means, or steps on the way, to the ultimate end. If we neglect this distinction, then we must also neglect to ask whether these partial ends are likely to promote the ultimate end, and accordingly, we must fail to act rationally. These principles, if applied to the realm of political activity, demand that we must determine our ultimate political aim, or the Ideal State, before taking any practical action. Only when this ultimate aim is determined, in rough outlines at least, only when we are in the
possession of something like a blueprint of the society at which we aim, only then can we begin to consider the best ways and means of its realization, and to draw up a plan for practical action. These are the necessary preliminaries of any practical political move that can be called rational, and especially of social engineering.

This is, in brief, the methodological approach which I call Utopian engineering. It is convincing and attractive. In fact, it is just the kind of methodological approach to attract all those who are either unaffected by historicist prejudices or reacting against them. This makes it only the more dangerous, and its criticism the more imperative.

Before proceeding to criticize Utopian engineering in detail, I wish to outline another approach to social engineering, namely, that of piecemeal engineering. It is the approach which I think to be methodologically sound. The politician who adopts this method may or may not have a blueprint of society before his mind, he may or may not hope that mankind will one day realize an ideal state, and achieve happiness and perfection on earth. But he will be aware that perfection, if at all attainable, is far distant, and that every generation of men, and therefore also the living, have a claim; perhaps not so much a
claim to be made happy, for there are no institutional means of making a man happy, but a claim not to be made unhappy, where it can be avoided. They have a claim to be given all possible help, if they suffer. The piecemeal engineer will, accordingly, adopt the method of searching for, and fighting against, the greatest and most urgent evils of society, rather than searching for, and fighting for, its greatest ultimate good 2. This difference is far from being merely verbal. In fact, it is most important. It is the difference between a reasonable method of improving the lot of man, and a method which, if really tried, may easily lead to an intolerable increase in human suffering. It is the difference between a method which can be applied at any moment, and a method whose advocacy may easily become a means of continually postponing action until a later date, when conditions are more favourable. And it is also the difference between the only method of improving matters which has so far been really success-ful, at any time, and in any place (Russia included, as will be seen) and a method which, wherever it has been tried, has led only to the use of violence in place of reason, and if not to its own abandonment, at any rate to that of its original blueprint.

In favour of his method, the piecemeal engineer can claim that a systematic fight against suffering and injustice and war is more likely to be supported by the approval and agreement of a great number of people than the fight for the establishment
of some ideal. The existence of social evils, that is to say, of social conditions under which many men were suffering, can be comparatively well established. Those who suffer can judge for themselves, and the others can hardly deny that they would not like to change places. It is infinitely more difficult to reason about an ideal society. Social life is so complicated that few

140 PLATO'S POLITICS

men, or none at all, could judge a blueprint for social engineering on the grand scale; whether it be practicable; whether it would result in a real improvement; what kind of suffering it may involve; and what may be the means for its realization. As opposed to this, blueprints for piecemeal engineering are comparatively simple. They are blueprints for single institutions, for health and unemployed insurance, for instance, or arbitration courts, or anti-depression budgeting or educational reform. If they go wrong, the damage is not very great, and a re-adjustment not very difficult. They are less risky, and for this very reason less controversial. But if it is easier to reach a reasonable agreement about existing evils and the means of combating them than it is about an ideal good and the means of its realization, then there is also more hope that by using the piecemeal method we may get over the very greatest practical difficulty of all reasonable political reform, namely, the use of reason, instead of passion
and violence, in executing the programme. There will be a possibility of reaching a reasonable compromise and therefore of achieving the improvement by democratic methods. (c

*Compromise* is an ugly word, but it is important for us to learn its proper use. Institutions are inevitably the result of a compromise with circumstances, interests, etc., though as persons we should resist influences of this kind.)

As opposed to that, the Utopian attempt to realize an ideal state, using a blueprint of society as a whole, is one which demands a strong centralized rule of a few, and which therefore is likely to lead to a dictatorship. This I consider a criticism of the Utopian approach, having shown, in the chapter on the Principle of Leadership, that an authoritarian rule is a most objectionable form of government. Some points not touched upon in that chapter furnish us with even more direct arguments against the Utopian approach. One of the difficulties faced by a benevolent dictator is to find whether the effects of his measures agree with his good intentions. The difficulty arises out of the fact that authoritarianism must discourage criticism; accordingly, the benevolent dictator will not easily hear of complaints regarding the measures he has taken. But without some such check, he can hardly find whether his measures achieve the desired benevolent aim. The situation must become even worse for the Utopian engineer. The reconstruction of society is a big undertaking which must cause considerable inconvenience to
many, and for a considerable span of time. Accordingly, the Utopian

CHAPTER 9 I RADICALISM 14!

engineer will have to be deaf to many complaints; in fact, it will be part of his business to suppress unreasonable objections. But with it, he must invariably suppress reasonable criticism also.

Another difficulty of Utopian engineering is connected with the problem of the dictator's successor. In chapter 7 I have mentioned certain aspects of this problem. Utopian engineering raises a difficulty analogous to but even more serious than that which faces the benevolent tyrant who tries to find an equally benevolent successor. The very sweep of such a Utopian undertaking makes it improbable that it will realize its ends during the lifetime of one social engineer, or group of engineers. And if the successors do not pursue the same ideal, then all the sufferings of the people for the sake of the ideal may be in vain.

A generalization of this argument leads to a further criticism of the Utopian approach. This approach, it is clear, can be of practical value only if we assume that the original blueprint, perhaps with certain adjustments, remains the basis of the work until it is completed. But that will take some time. It will be a time of revolutions, both political and spiritual. It is therefore to be expected that ideas and ideals will change. What had
appeared the ideal state to the people who made the original blueprint, may not appear so to their successors. If that is granted, then the whole approach breaks down. The method of first establishing an ultimate political aim and then beginning to move towards it is futile if we admit that the aim may be considerably changed during the process of its realization. It may at any moment turn out that the steps so far taken actually lead away from the realization of the new aim. And if we change our direction according to the new aim, then we expose ourselves to the same risk again. In spite of all the sacrifices made, we may never get anywhere at all. Those who prefer one step towards a distant ideal to the realization of a piecemeal com- promise should always remember that if the ideal is very distant, it becomes difficult to say whether the step taken was towards or away from it. This is especially so if the course should proceed by zigzag steps, or, in Hegel's jargon, 'dialectically', or if it is not clearly planned at all. (This bears upon the old and some- what childish question of how far the end can justify the means. Apart from claiming that no end could ever justify all means, I think that a fairly concrete and realizable end may justify temporary measures as a more distant ideal never could.)

We see now that the Utopian approach can be saved only by

142 PLATO'S POLITICS
the Platonic belief in one absolute and unchanging ideal, together with two further assumptions, namely (a) that there are rational methods to determine once and for ever what this ideal is, and (b) what the best means of its realization are. Only such far-reaching assumptions could prevent us from declaring the Utopian methodology to be utterly futile. But even Plato himself and the most ardent Platonists would admit that (a) is certainly not true; that there is no rational method for determining the ultimate aim, but, if anything, only some kind of intuition. Any difference of opinion between Utopian engineers must therefore lead, in the absence of rational methods, to the use of power instead of reason, i.e. to violence. If any progress in any definite direction is made at all, then it is made in spite of the method adopted, not because of it. The success may be due, for instance, to the excellence of the leaders; but we must never forget that excellent leaders cannot be produced by rational methods, but only by luck.

It is important to understand this criticism properly; I do not criticize the ideal by claiming that an ideal can never be realized, that it must always remain a Utopia. This would not be a valid criticism, for many things have been realized which have once been dogmatically declared to be unrealizable, for instance, the establishment of institutions for securing civil peace, i.e. for the prevention of crime within the state; and I think that, for instance,
the establishment of corresponding institutions for the prevention of international crime, i.e. armed aggression or blackmail, though often branded as Utopian, is not even a very difficult problem 7.

What I criticize under the name Utopian engineering recommends the reconstruction of society as a whole, i.e. very sweeping changes whose practical consequences are hard to calculate, owing to our limited experiences. It claims to plan rationally for the whole of society, although we do not possess anything like the factual knowledge which would be necessary to make good such an ambitious claim. We cannot possess such knowledge since we have insufficient practical experience in this kind of planning, and knowledge of facts must be based upon experience. At present, the sociological knowledge necessary for large-scale engineering is simply non-existent.

In view of this criticism, the Utopian engineer is likely to grant the need for practical experience, and for a social technology based upon practical experiences. But he will argue that we shall never know more about these matters if we recoil from making social experiments which alone can furnish us with the practical experience needed. And he might add that Utopian engineering is nothing but the application of the experimental method to society. Experiments cannot be carried out without
involving sweeping changes. They must be on a large scale, owing to the peculiar character of modern society with its great masses of people. An experiment in socialism, for instance, if confined to a factory, or to a village, or even to a district, would never give us the kind of realistic information most urgently needed.

Such arguments in favour of Utopian engineering exhibit a prejudice which is as widely held as it is untenable, namely, the prejudice that social experiments must be on a large scale, that they must involve the whole of society if they are to be carried out under realistic conditions. But piecemeal social experiments can be carried out under realistic conditions, in the midst of society, in spite of being on a small scale, that is to say, without revolutionizing the whole of society. In fact, we are making such experiments all the time. The introduction of a new kind of life-insurance, of a new kind of taxation, of a new penal reform are all social experiments which have their repercussions through the whole of society without remodelling society as a whole. Even a man who opens a new shop, or who reserves a ticket for the theatre, is carrying out a kind of social experiment on a small scale; and all our knowledge of social conditions is based on experience gained by making experiments of this kind. The Utopian engineer we are combating is right when he stresses that an experiment in socialism would be of little value if carried out under laboratory conditions, for instance, in an
isolated village, since what we want to know is how things work out in society under normal social conditions. But this very example shows where the prejudice of the Utopian engineer lies. He is convinced that we must recast the whole structure of society, when we experiment with it; and he can therefore conceive a more modest experiment only as one that recasts the whole structure of a small society. But the kind of experiment from which we can learn most is the alteration of one social institution at a time. For only in this way can we learn how to fit institutions into the framework of other institutions, and how to adjust them so that they work according to our intentions. And only in this way can we make mistakes, and learn from our mistakes, without risking repercussions of a gravity that must endanger the will to future reforms. Furthermore, the Utopian method must lead to a dangerous dogmatic attachment to a blueprint for which countless sacrifices have been made. Powerful interests must become linked up with the success of the experiment. All this does not contribute to the rationality, or to the scientific value, of the experiment. But the piecemeal method permits repeated experiments and continuous readjustments. (In fact, it might lead to the happy situation where politicians begin to look out for their own mistakes instead of trying to explain them away and
to prove that they have always been right. This would mean the
introduction of scientific method into politics, since the whole
secret of scientific method is a readiness to learn from mistakes 8 .)

These views can be corroborated, I believe, by comparing
social and, for instance, mechanical engineering. The Utopian
ingineer will of course claim that the mechanical engineer plans
even very complicated machinery as a whole, and that his blue-
prints may cover, and plan beforehand, not only a certain kind
of machinery, but even the whole factory which produces this
machinery. My reply would be that he can do all this because
he has sufficient experience, i.e. because he has made all kinds of
mistakes already. This experience he has gained by applying a
piecemeal method. His new machinery is the result of a great
many small improvements. He has had a model first, and only
after a great number of piecemeal adjustments to its various parts
did he proceed to a stage where he could draw up his final plans
for the production. Similarly, his plan for the production of his
machine incorporates a great number of experiences, namely, of
piecemeal improvements made in older factories. The whole-
sale or large-scale method works only where the piecemeal method
has first furnished us with a great number of detailed experiences,
and even then only within the realm of these experiences. No
manufacturer will proceed to the production of a new engine on
the basis of a blueprint alone, even if it were drawn
up by the greatest expert, without first making a model and ' developing ' it by little adjustments as far as possible.

It is perhaps useful to contrast this criticism of Platonic Idealism in politics with Marx's criticism of what he called * Utopianism '. What is common to Marx's criticism and mine is that both demand more realism. But there are many differences. In arguing against Utopianism, Marx condemns all social engineering. He denounces the hope in a rational planning of social institutions as altogether unrealistic, since

CHAPTER 9 .* RADICALISM 145

society must grow according to the laws of history and not according to our rational plans. All we can do, he maintains, is to lessen the birthpangs of the historical processes. In other words, he opposes a radical historicism to all social engineering. But there is one element within Utopianism, characteristic, for instance, of Plato's approach, which Marx does not oppose, although it is one of the elements which I have attacked as unrealistic. This is its sweep, its attempt to deal with society as a whole ; for he expects that history will bring us a revolution which will completely re-model the whole ' social system '.

This sweep, this radicalism of the Platonic approach (and of the Marxian as well) is, I believe, connected with its aestheticism, i.e. with the desire to build a world which is not only
a little
better and more rational than ours, but which is free
from all its
ugliness: not a crazy quilt, an old garment badly
patched, but
an entirely new coat, a really beautiful new world.
This
aestheticism is a very understandable attitude; in
fact, I believe
most of us suffer from it a little (some reasons why we
do so may
emerge from the next chapter). But this aesthetic
enthusiasm
becomes valuable only if it is bridled by reason, by a
feeling of
responsibility, and by a humanitarian urge to help.
Otherwise
it is a dangerous enthusiasm, liable to develop into a
form of
neurosis or hysteria.

Nowhere do we find this aestheticism more strongly
expressed
than in Plato. Plato was an artist; and like many of
the best
artists, he tried to visualize a model, the divine
original of his
work, and to copy it faithfully. A good number of
the quotations
given in the last chapter illustrate this point. What
Plato
describes as dialectics is, in the main, the
intellectual intuition of
the world of pure beauty. His trained philosophers are
men
who* have seen the truth of what is beautiful and
just, and
good'10, and can bring it down from heaven to earth.
Politics,
to Plato, is an art not in a metaphorical sense in
which we may
speak about the art of treating men, or the art of
getting things
done, but in a more literal sense of the word. It is an
art of
composition, like music, painting, or architecture. The
Platonic
politician composes cities, for beauty's sake.
But here I must protest. I do not believe that human lives may be made the means for satisfying an artist's desire for self-expression. We must demand, rather, that every man should be given, if he wishes, the right to model his life himself, as far as this does not interfere too much with others. Much as I may

sympathize with the aesthetic impulse, I suggest that the artist might seek expression in another material. Politics, we demand, must uphold equalitarian and individualistic principles; dreams of beauty have to submit to the necessity of helping men in distress, and men who suffer injustice; and to the necessity of constructing institutions to serve such purposes.

It is interesting to observe the close relationship between Plato's radicalism, the demand for sweeping measures, and his aestheticism. The following passages are most characteristic.

Plato, speaking about *the philosopher who has communion with the divine* 12, mentions first that he will be *overwhelmed by the urge* . . to realize his heavenly vision in individuals as well as in the city', a city which 'will never know happiness unless its draughtsmen are artists who have the divine as their model'.

Asked about the details of their draughtsmenship, Plato's 'Socrates' gives the following striking reply: c They will take as their canvas a city and the characters of men, and they will, first
of all, make their canvas clean by no means an easy matter. But
this is just the point, you know, where they will
differ from all
others. They will not start work on a city nor on an
individual
(nor will they draw up laws) unless they are given a
clean canvas,
or have cleaned it themselves.'

The artist-politician has first to make his canvas
clean, to
destroy existing institutions, to purify, to purge. This is an
excellent description of all political radicalism, of the estheticist's
refusal to compromise. The view that society should be
beautiful
like a work of art leads only too easily to violent
measures. And all
this radicalism and violence is both unrealistic and
futile. (This
has been shown by the example of Russia's development. After
the economic breakdown to which the canvas cleaning of the so-
called 'war communism' had led, Lenin introduced his so-called
* New Economic Policy ', in fact a kind of piecemeal
engineering,
though without the conscious formulation of its
principles or of a
technology. He started by restoring most of the
features of the
picture which had been eradicated with so much human
suffering.
Money, markets, differentiation of income, and private
property
for a time even private enterprise in production were
reintroduced, and only after this basis was re-
established began a
new period of reform 13.)

In order to criticize the foundations of Plato's
aesthetic
radicalism, we may distinguish two different points.

(i) A picture painted on a canvas which has to be wiped
clean before one can paint a new one this is what people have in mind nowadays when they speak of our social system. But there are some great differences. One of them is that the painter and those who co-operate with him as well as the institutions which make their life possible, are all part of the social system, i.e. of the picture to be wiped out. If they were really to clean the canvas, they would have to destroy themselves, and all their plans for a new world. (And what follows then would probably not be a beautiful copy of a Platonic ideal but chaos.) The political artist clamours, like Archimedes, for a place outside the social world on which he can take his stand, in order to lever it off its hinges. But such a place does not exist; and the social world must continue to function during any reconstruction. This is the simple reason why we must reform its institutions little by little, until we have more experience in social engineering.

(2) This leads us to a more important point, to the irrationalism which is inherent in radicalism. In all matters, we can only learn by trial and error, by making mistakes and improvements; we can never rely on inspiration, although inspirations may be most valuable as long as they can be checked by experience. Accordingly, it is not reasonable to assume that a complete reconstruction of our social world would lead at once to a workable system.
Rather we should expect that, owing to lack of experience, many mistakes would be made, which could be only eliminated by a long and laborious process of improvement; in other words, by that rational method of piecemeal engineering whose application we advocate. But those who dislike this method as insufficiently radical would have again to wipe out their freshly constructed society, in order to start anew with a clean canvas; and since the new start, for the same reasons, would not lead to perfection either, they would have to repeat this process without ever reaching anything. Those who admit this and are prepared to adopt our more modest method of piecemeal improvements, but only after the first canvas cleaning, can hardly escape the criticism that their first sweeping and violent measures were quite unnecessary.

Aestheticism and radicalism must lead us to jettison reason, and to replace it by 3, desperate hope for political miracles. This irrational attitude which springs from an intoxication with dreams of a beautiful world is what I call Romanticism. It may seek its heavenly city in the past or in the future; it may preach 'back to nature' or 'forward to a world of love and beauty'; but its appeal is always to our emotions rather than to reason. Even with the best intentions of realizing heaven on
Plato attacks

Chapter 10: The Open Society and Its Enemies

There is still something missing from our analysis. The contention that Plato's political programme is purely totalitarian and the objections to it raised in chapter 6 have led us to examine the role played, within this programme, by such moral ideas as Justice, Wisdom, Truth, and Beauty. The result of this examination was always the same. We found that the role of these ideas is important, but that they do not lead Plato beyond totalitarianism and racialism. But one of these ideas we have still to examine: that of Happiness. It may be remembered that we quoted Grossman (and Joad) in connection with the belief that Plato's political programme is fundamentally a *plan for the building of a perfect state in which every citizen is really happy*, and that I described this belief as a relic of the tendency to idealize Plato. If called upon to justify my opinion, I should not have much difficulty in pointing out that Plato's treatment of happiness is exactly analogous to his treatment of justice; and especially, that *justice is divided into classes or castes. (Justice, happiness,*) Plato insists, is achieved only by justice, i.e. by keeping to one's
place. The ruler must find happiness in ruling, the warrior in warring; and, we may infer, the slave in slaving. Apart from that, Plato says frequently that what he is aiming at is neither the happiness of individuals nor that of any particular class in the state, but only the happiness of the whole, and this, he maintains, is nothing but the outcome of that rule of justice which (I have shown to be) totalitarian in character. That only this justice can lead to any true happiness is one of the main theses of the Republic.

In view of all this, it seems to be a consistent and hardly refutable interpretation of the material to present Plato as a totalitarian party-politician, unsuccessful in his immediate and practical undertakings, but in the long run only too successful in his propaganda for the arrest and overthrow of a civilization which he hated. But one has only to formulate this interpretation in this blunt fashion in order to feel that there is something amiss.

150 PLATO ATTACKS

with it. At any rate, so I felt, when I had formulated it. I felt perhaps not so much that it was untrue, but that it was defective. I therefore began to search for evidence which would refute this interpretation. However, in every point but one, this attempt to refute the interpretation was quite unsuccessful. The new material made the identity between Platonism and totalitarianism
only the more manifest.

The one point in which I felt that my search for a refutation had succeeded concerned Plato's hatred of tyranny. Of course, there was always the possibility of explaining this away. It would have been easy to say that his indictment of tyranny was mere propaganda. Totalitarianism always professes a love for true ' freedom, and Plato's praise of freedom as opposed to tyranny sounds exactly like this professed love. In spite of this, I felt that certain of his observations on tyranny, which will be mentioned later in this chapter, were sincere. Of course, the fact that tyranny usually meant in Plato's day a form of rule based on the support of the masses, would make it possible to claim that Plato's hatred was consistent with my original interpretation. But I felt that this did not remove the need for modifying the interpretation. I also felt that the mere emphasis on Plato's fundamental sincerity was quite insufficient to accomplish this modification. No amount of emphasis could offset the general impression of the picture. A new picture was needed which would have to include Plato's sincere belief in his mission as healer of the sick social body, as well as the fact that he had seen more clearly than anybody else before or after him what was happening to Greek society. Since the attempt to reject the identity of Platonism and totalitarianism had not improved the picture, I was ultimately forced to modify my interpretation of totalitarianism itself. In other words, my attempt to
understand
Plato by analogy with modern totalitarianism led, to my own surprise, to a new view of totalitarianism.

In the light of the interpretation, it appears to me that Plato's declaration of his wish to make the state and its citizens happy is not merely propaganda. I grant his fundamental benevolence. I also grant that he was right, to a limited extent, in the sociological analysis on which he based his promise of happiness. To put this point more precisely: I believe that Plato, with deep sociological insight, found that his contemporaries were suffering under a severe strain, and that this strain was due to the social revolution which had begun with the rise of democracy and individualism.

CHAPTER 10 : THE OPEN SOCIETY 151

For reasons discussed later in this chapter, I believe that the medico-political treatment which he recommended, the arrest of change and the return to tribalism, was hopelessly wrong. But the recommendation, though not practicable, shows an amazing power of diagnosis. Plato knew what was amiss, he understood the strain, the unhappiness, under which the people were labouring, although he erred in his fundamental claim that by leading them back to tribalism he could restore their happiness, and lessen the strain.

It is my intention to give in this chapter a brief survey of the historical material which induced me to hold such
opinions. A few remarks on the method adopted, that of historical interpretation, will be found in the last chapter of the book. It will therefore suffice here if I say that I do not claim scientific status for this method, since the testing of an interpretation can never be as thorough as that of an ordinary hypothesis. The interpretation is mainly a point of view, whose value lies in its fertility, in its power to throw light upon the historical material, to lead us to find new material, and to help us to rationalize and to unify it. What I am going to say here is therefore not asserted dogmatically however boldly I may perhaps sometimes express my opinions.

Our western civilization originated with the Greeks. They made the step from tribalism to humanitarianism. Let us consider what that means.

The early Greek tribal society resembles in many respects that of peoples like the Polynesians, the Maoris, for instance. Small bands of warriors, usually living in fortified settlements, were ruled by tribal chiefs or kings, or by aristocratic families, who waged wars against one another on sea as well as on land. There were, of course, many differences between the Greek and the Polynesian ways of life, for there is, admittedly, no uniformity in tribalism. There is no standardized 'tribal way of life'. It seems to me, however, that there is one distinguishing feature
which is common to most, if not all, of these tribal societies. I mean their magical or irrational attitude towards the customs of social life, and the corresponding rigidity of these customs.

When I speak of the rigidity of tribalism I do not mean that no changes can occur in the tribal ways of life. I rather mean that the comparatively infrequent changes have the character of religious conversions, or of the introduction of new magical taboos. They are not based upon a fully rational attempt to improve social conditions. Apart from such rare changes, taboos rigidly regulate and dominate all aspects of life. They do not leave many loop-holes. There are few problems in this form of life, and nothing really equivalent to moral problems. I do not mean that it does not sometimes need much heroism for a member of a tribe to act in accordance with the taboos. What I mean is that he will never find himself in the position of doubting how he ought to act. The right way is always determined, though difficulties must be overcome in following it. It is determined by taboos, by magical tribal institutions which can never become objects of critical consideration. Not even a Heraclitus distinguishes clearly between the institutional laws of tribal life and the laws of nature; both are taken to be of the same magical character. Based upon the collective
tribal tradition, institutions leave no room for personal responsibility. The taboos that establish some form of group-responsibility may be the forerunner of what we call personal responsibility, but they are fundamentally different from it. They are not based upon a principle of reasonable accountability, but upon a magical idea of appeasing the powers of fate.

It is well known how much of this still survives. Our own ways of life are still beset with taboos, food taboos, taboos of politeness, and many others. And yet, there are some important differences. In our own way of life there is, between the laws of the state on the one hand, and on the other the taboos we habitually observe, an ever-widening field of personal decisions, with its problems and responsibilities; and we know the importance of this field. Personal decisions may lead to the alteration of taboos, and even of political laws which are no longer taboos. The great difference is the possibility of rational reflection upon these matters. We make rational decisions, that is to say, decisions based upon an estimate of their consequences, and upon a conscious preference for certain consequences to others. We recognize rational personal responsibility.

In what follows, the magical or tribal or collectivist society will also be called the closed society, and the society in which individuals are confronted with personal decisions, the open society.*
The closed society at its best can be justly compared to an organism. The so-called organic or biological theory of the

CHAPTER IO I THE OPEN SOCIETY 153

state is to a certain extent applicable here, since the closed society lacks those features of the open society which must defeat every attempt to apply this theory. The features I have in mind are those connected with the fact that, in the open society, many members strive to take the place of other members. This may express itself, for instance, in such an important phenomenon as class struggle. We cannot find anything like class struggle in an organism. The cells or tissues of an organism which are sometimes said to correspond to the members of a state, may perhaps compete for food; but there is no inherent tendency on the part of the legs to become the brain, or of other members of the body to become the belly. Since there is nothing in the organism to correspond to one of the most important features of the open society, competition for status among its members, the so-called organic theory of the state is based on a false analogy. The closed society, on the other hand, does not know much of such tendencies. Its institutions, including its castes, are sacrosanct taboo. The organic theory does not fit so badly here. It is therefore not surprising to find that most attempts to apply the organic theory to our society are veiled forms of propaganda for
a return to tribalism 7.

Thus when we say that our western civilization comes from the Greeks, we ought to be clear what that means. It means that the Greek began that greatest of all revolutions, a revolution which started just yesterday, as it were, for we are still in its initial stage the transition from the closed to the open society.

Of course, this revolution was not made consciously. The breakdown of tribalism may be traced back to the time when population growth began to make itself felt among the ruling class of landed proprietors. This meant the end of 'organic' tribalism. For it created social tension within the closed society of the ruling class. At first, there appeared to be something like an 'organic' solution of this problem, the creation of daughter cities. The character of this solution is shown by the magical procedure in the sending out of colonists. But this ritual of colonization only postponed the breakdown. It even created new danger spots wherever it led to cultural contacts; and these, in turn, created the worst danger, commerce, and a new class engaged in trade and seafaring. By the sixth century B.C., this development had led to the partial dissolution of the old ways of life, and even to a series of political revolutions and O.S.I.E. VOL. i F

154 PLATO ATTACKS
reactions. And it had led not only to attempts to retain and to arrest tribalism by force, as in Sparta, but also to that great spiritual revolution, the invention of thought that was free from magical obsessions. At the same time we find the first symptoms of a new uneasiness. The strain of civilization was beginning to be felt.

This strain, or uneasiness, is a direct consequence of the shock due to the breakdown of the closed society; a shock which I do not doubt has not been forgotten even in our day. It is the strain of the demand that we should be rational, look after ourselves, and take immense responsibilities. It is the price we have to pay for being human.

The strain is most closely related to the problem of the tension between the classes which is raised for the first time by the breakdown of the closed society. The closed society itself does not know this problem. At least to its ruling members, slavery, caste, and class rule are *natural* in the sense of being unquestionable. But with the breakdown of the closed society, this certainty disappears, and with it all feeling of security. The tribal community, the *city*, is the place of security for the member of the tribe. Surrounded by enemies and by dangerous or even hostile magical forces, he experiences the tribal community as a child experiences his family and his home, in which he plays his definite part; a part he knows well, and plays well.
The breakdown of the closed society and the opening up of the problems of class and other problems of status must have the same effect upon the citizens as a serious family quarrel and the breaking up of the family home must have on children. Of course, this kind of strain must be felt by the privileged classes, now that they are threatened, more strongly than by those who had formerly been suppressed; but even the latter felt uneasy. They also were frightened by the breakdown of their natural world. And though they continued to fight their struggle, they were often reluctant to exploit their victories over their class enemies, who had tradition, the status quo, a higher level of education, and the feeling of natural authority, on their side.

In this light we must try to understand the history of Sparta which had arrested these developments, and of Athens, the leading democracy.

Perhaps the most powerful cause of the breakdown of the closed society is the development of sea-communications and commerce. Close contact with other tribes is liable to undermine the feeling of necessity with which tribal institutions are viewed; and trade, commercial initiative, appears to be one of the few forms in which individual initiative and independence can assert itself, even in a society in which tribalism still prevails.
These two, seafaring and commerce, were the outstanding features of Athenian imperialism, as it developed in the fifth century B.C. And indeed they were recognized as the most dangerous developments by the oligarchs, the members of the privileged, or of the formerly privileged, classes of Athens. It became clear to them that the trade of Athens, its monetary commercialism, its naval policy, and its democratic tendencies, were a single large movement, and that it was impossible to defeat democracy without going the whole way, i.e. destroying the naval policy and the empire. But the naval policy of Athens was based upon its harbour, the Piraeus; and strategically, upon the walls that fortified Athens, and later, upon the Long Walls which linked it to the harbours of the Piraeus and Phalerum. We find, accordingly, that for more than a century the empire, the fleet, the harbour, and the walls, were hated by the oligarchic parties of Athens as the strongpoints and the symbols of the Athenian democratic power which they hoped one day to destroy.

Much evidence of this development can be found in Thucydides' History of the Peloponnesian War, or rather, of the two great wars of 431-421 and 419-403 B.C., between Athenian democracy and the arrested oligarchic tribalism of Sparta. When reading Thucydides we must never forget that his heart was not with Athens, his native city. Although he apparently did not belong to the extreme wing of the Athenian oligarchic clubs who conspired throughout the war with the enemy, he was
certainly a member of the oligarchic party, and a friend neither of the Athenian people, the demos, who had exiled him, nor of its imperialist policy. (I do not intend to belittle Thucydides, the greatest historian, perhaps, who ever lived. But however successful he was in making sure of the facts he records, and in spite of his sincere efforts to be impartial, his comments and moral judgements represent an interpretation, a point of view; and in this we need not agree with him.) I quote first a passage on Themistocles' policy in 482 B.C., half a century before the Peloponnesian war: * Themistocles also persuaded the Athenians to finish the Piraeus... Since the Athenians had now taken to the sea 3 he thought that they had a great opportunity for building an empire. He was the first who dared to say that they should make the sea their domain... 10 Twenty-five years later, 'the Athenians began to build their Long Walls to the sea, one to the harbour of Phalerum, the other to the Piraeus.' 11 But this time, twenty-six years before the outbreak of the Peloponnesian war, the oligarchic party was fully aware of the meaning of these developments. We hear from Thucydides that they did not shrink even from the most blatant treachery. As sometimes happens with oligarchs, class interest superseded their patriotism. An opportunity offered itself in the form
of a hostile Spartan expeditionary force operating in the north of Athens, and they determined to conspire with Sparta against their own country. Thucydides writes: "Certain Athenians were privately making overtures to them (i.e. to the Spartans) in the hope that they would put an end to the democracy, and to the building of the Long Walls. But the other Athenians . . suspected their design against democracy. 5 The loyal Athenian citizens therefore went out to meet the Spartans, but were defeated. It appears, however, that they had weakened the enemy sufficiently to prevent him from joining forces with the fifth columnists within their own city. Some months later, the Long Walls were completed, which meant that the Athenian democracy could enjoy security as long as it upheld its naval supremacy.

This incident throws light on the tenseness of the class situation in Athens, even twenty-six years before the outbreak of the Peloponnesian war, during which the situation became even worse. It also throws light on the methods employed by the subversive and pro-Spartan oligarchic party. Thucydides, one must note, mentions their treachery only in passing, and he does not censure them, although in other places he speaks most strongly against class struggle and party spirit. The next passages quoted, written as a general reflection on the Gorcyraean Revolution of 427 B.C., are interesting, first as an excellent picture of the class situation; secondly, as an illustration of the strong words Thucydides could find when he wanted to describe
analogous tendencies on the side of the democrats of Corcyra.
(In order to judge his apparent impartiality we must remember that in the beginning of the war Corcyra had been one of Athens' democratic allies, and that the revolt had been started by the oligarchs.) Moreover, the passage is an excellent expression of the feeling of a general social breakdown: 'Nearly the whole Hellenic world', writes Thucydides, 'was in commotion. In

CHAPTER IO : THE OPEN SOCIETY 157
every city, the leaders of the democratic and of the oligarchic parties were trying hard, the one to bring in the Athenians, the other the Lacedaemonians... The tie of party was stronger than the tie of blood... The leaders on either side used specious names, the one party professing to uphold the constitutional equality of the many, the other the wisdom of an aristocracy; in reality they made the public interest their price, professing, of course, their devotion to it. They used any conceivable means for getting the better of one another, and committed the most monstrous crimes... This revolution gave birth to every form of wickedness in Hellas... Everywhere prevailed an attitude of perfidious antagonism. There was no word binding enough, no oath terrible enough, to reconcile enemies. Each man was strong only in the conviction that nothing was secure.' 12

The full significance of the attempt of the Athenian
oligarchs to accept the help of Sparta and stop the building of the Long Walls can be gauged when we realize that this treacherous attitude had not changed when Aristotle wrote his Politics, more than a century later. We hear there about an oligarchic oath, which, Aristotle said, "is now in vogue". This is how it runs:

* I promise to be an enemy of the people, and to do my best to give them bad advice! * 13 It is clear that we cannot understand this period without keeping such hatred in mind.

I mentioned above that Thucydides himself was an anti-democrat. This becomes clear when we consider his description of the Athenian empire, and the way it was hated by the various Greek states. Athens' rule over its empire, he tells us, was felt to be no better than a tyranny, and all the Greek tribes were afraid of her. In describing public opinion at the outbreak of the Peloponnesian war, he is mildly critical of Sparta and very critical of Athenian imperialism. * The general feeling of the peoples was strongly on the side of the Lacedaemonians; for they maintained that they were the liberators of Hellas. Cities and individuals were eager to assist them . . , and the general indignation against the Athenians was intense. Some were longing to be liberated from Athens, others fearful of falling under its sway.' 14 It is most interesting that this judgement of the Athenian empire has become, more or less, the official judgement of "History", i.e.' of most of the historians. Just as the philosophers find it hard to free themselves from Plato's
point of view, so are the historians bound to that of Thucydides. As an example, I may quote Meyer, who simply repeats Thucydides when he says: 'The sympathies of the educated world of Greece were... turned away from Athens.'

But such statements are only expressions of the anti-democratic point of view. Many facts recorded by Thucydides, for instance, the passage quoted on the attitude of the democratic and oligarchic party leaders, show that Sparta was not popular among the peoples of Greece but only among the oligarchs the 'educated', as Meyer puts it so nicely. Even Meyer admits that 'the democratically minded masses hoped in many places for her victory' i.e. for the victory of Athens; and Thucydides' narrative contains many instances which prove Athens' popularity among the democrats and the suppressed. But who cares for the opinion of the uneducated masses? If Thucydides and the 'educated' maintained that Athens was a tyrant, then she was a tyrant.

It is most interesting that the same historians who hail Rome for her achievement, the foundation of a universal empire, condemn Athens for her attempt to achieve something better. The fact that Rome succeeded where Athens failed is not a sufficient explanation of this attitude. They do not
really censure Athens for her failure, since they loathe the very idea that her attempt might have been successful. Athens, they believe, was a ruthless democracy, a place ruled by the uneducated, who simply hated and suppressed the educated, and were hated by them in turn. But this is of course pure nonsense, as shown by the amazing spiritual productivity of Athens in this particular period. Even Meyer must admit this productivity. *What Athens produced in this decade*, he says modestly, *fi ranks equal with one of the mightiest decades of German literature.* 17 Pericles, who was the democratic leader of Athens at this time, was more than justified when he called her the School of Hellas.

I am far from defending everything that Athens did in building up her empire, and I do not defend wanton attacks (if such have occurred), or acts of brutality; nor do I forget that Athenian democracy was still based on slavery 18. But it is necessary, I believe, to see that tribalist exclusiveness and self-sufficiency could be superseded only by some form of imperialism. And it must be said that certain of the imperialist measures introduced by Athens were rather liberal. One very interesting instance is the fact that Athens offered, in 405 B.C., to her ally, the Ionian island Samos, *that the Samians should be Athenians from now on*; and that both cities should be one state; and that the
Samians should order their internal affairs as they chose, and retain their laws. Another instance is Athens' method of taxing her empire. Much has been said about these taxes which have been described, very unjustly, I believe, as a shameless and tyrannical way of exploiting the smaller cities. In an attempt to evaluate the significance of these taxes, we must, of course, compare them with the volume of the trade protected by the Athenian fleet in return. The necessary information is given by Thucydides, from whom we learn that the Athenians imposed upon their allies, in 413 B.C., 'instead of a tribute, a duty of 5 per cent, on all things imported and exported by sea; and they thought that this would yield more'. This measure, adopted under severe strain of war, compares favourably, I believe, with the Roman methods of centralization. The Athenians, by this method of taxation, became interested in the development of allied trade, and so in the initiative and independence of the various members of their empire. Originally, the Athenian empire had developed out of a league of equals. In spite of the temporary domination of Athens, her interest in the development of trade might have led, in time, to some kind of federal constitution. At least, we know nothing of the Roman method of 'transferring' the cultural possessions from the empire to the dominant city, i.e. of looting. And whatever one might say against plutocracy, it is preferable to a rule of looters.
This favourable view of Athenian imperialism can be supported by comparing it with the Spartan methods in foreign affairs. These were determined by the ultimate aim of all Spartan politics, the arrest of change, the return to tribalism; their principles were: (i) Tribalism and arrestment proper: shut out all foreign influences which might endanger the rigidity of tribal taboos. (2) Anti-humanitarianism: shut out, more especially, all equalitarian, democratic, and individualistic ideologies. (3) Autarchy: be independent of trade. (4) Anti-universalism or particularism: uphold the differentiation between your tribe and all others; do not mix with inferiors. (5) Mastery: dominate and enslave your neighbours. (6) But do not become too large: 'The city should grow only as long as it can do so without impairing its unity' 22, and especially, without risking the introduction of universalistic tendencies. If we compare these six principal tendencies with those of modern totalitarianism, then we see that they agree fundamentally, with the sole exception of the last. The difference can be described

16o PLATO ATTACKS

by saying that modern totalitarianism appears to have imperialist tendencies. But this imperialism has no element of a tolerant universalism, and the world-wide ambitions of the modern totalitarians are imposed upon them, as it were, against their will. Two factors are responsible for this: a general
tendency of all tyrannies to justify their existence by saving the state from its enemies, and perhaps more important, the difficulties in carrying out points (2) and (5) of the above programme in our modern world. Humanitarian tendencies have become so universal that humanitarianism can be shut out only if it is destroyed all over the world. Besides, this world has become so small that everybody is now a neighbour, and must therefore be enslaved. But in ancient times, nothing could have appeared more dangerous to those who adopted a particularism like Sparta's, than Athenian imperialism, with its possibility of developing into a universal empire of man.

Summing up our analysis so far, we can say that the political and spiritual revolution which had begun with the breakdown of Greek tribalism reached its climax in the fifth century, with the outbreak of the Peloponnesian war. It had developed into a violent class war, and, at the same time, into a war between the two leading cities of Greece.

But how can we explain the fact that outstanding Athenians like Thucydides stood on the side of reaction? Class interest may play its role here, but it is, I believe, an insufficient explanation. The main point seems to be that although the open society was already in existence, although it had, in practice, begun to develop new values, new equalitarian standards of life, there was still something missing especially for the c educated '. The new faith of the open society, its only possible faith,
humanitarianism, was beginning to assert itself, but was not yet formulated. For the time being, one could not see much more than class war, the democrats' fear of the oligarchic reaction, and the threat of further revolutionary developments. The reaction, therefore, had much on its side, tradition, the call for defending old virtues, and the old religion. These tendencies appealed to the feelings of most men, and their popularity gave rise to a movement to which, although it was led and used for their own ends by the Spartans and their oligarchic friends, many upright men must have belonged, even at Athens. From the slogan of the movement, * Back to the state of our forefathers ', or * Back to the old paternal state ', derives the term ' patriot '. It is hardly necessary to

CHAPTER IO : THE OPEN SOCIETY 161

insist that the beliefs popular among those who supported this ' patriotic ' movement were grossly misused by those oligarchs who did not shrink from handing over their own city to the enemy, in the hope of gaining support against the democrats. Thucydides was one of the representative leaders of this movement for the ' paternal state ' 23 , and though he probably did not support the treacherous acts of the extreme anti-democrats, he could not disguise his sympathies with their fundamental purpose: to arrest change, and to fight the universalistic imperialism of the Athenian democracy and the
instruments and symbols of its power, the navy, the walls, and commerce. (In view of Plato's doctrines about commerce, it may be interesting to note how great the fear of commercialism was. When after his victory over Athens in 404 B.C. the Spartan king, Lysander, returned with great booty, the Spartan * patriots ', i.e. the members of the movement for the c paternal state ', tried to prevent the import of gold ; and though it was ultimately admitted, its possession was limited to the state, and capital punishment was imposed on any citizen found in possession of precious metals. 24 )

Although the * patriotic 3 movement was partly the expression of the longing to return to more stable forms of life, to religion, decency, law and order, it was itself morally rotten. Its ancient faith was lost, and was largely replaced by a hypocritical and even cynical exploitation of religious sentiments. 25 Nihilism, as painted by Plato in the portraits of Calliclcs and Thrasymachus, could be found if anywhere among the young ' patriotic ' aristocrats who, if given the opportunity, became leaders of the democratic party. The clearest example of this nihilism is perhaps the oligarchic leader who helped to deal the death-blow at Athens, Plato's uncle Critias, the leader of the Thirty Tyrants. 26

But at this time, in the same generation to which Thucydides belonged, there rose a new faith in reason, freedom and the brotherhood of all men the new faith, and, as I
believe, the
only possible faith, of the open society.

This generation which marks a turning point in the
history of
mankind, I would like to call the Great Generation; it
is the
generation which lived in Athens during the
Peloponnesian war.
There were great conservatives among them, like
Sophocles 27, or Thucydides. There were men among them who represent the
period of transition; who were wavering, like
Euripides, or
sceptical, like Aristophanes. But there was also the
great

I 62 PLATO ATTACKS

leader of democracy, Pericles, who formulated the
principle of
equality before the law, and of political
individualism, and
Herodotus, welcomed and hailed in Pericles' city as the author
of a work that glorified these principles. Protagoras, a native
of Abdera who became influential in Athens, and his
countryman Democritus, must also be counted among the Great Generation. They formulated the doctrine that human institutions
of language, custom, and law are not taboos but man-made, not
natural but conventional, insisting, at the same time, that we
are responsible for them. Then there was the school of Gorgias
Alcidamas, Lycophron, and Antisthenes, who developed the
fundamental tenets of anti-slavery, and of anti-nationalism, i.e.
the creed of the universal empire of men. And there was,
perhaps the greatest of all, Socrates, who taught the
lesson that we must have faith in human reason, but beware of dogmatism;
that we must keep away both from misology, the distrust of theory and of reason, and from the magical attitude of making an idol of wisdom; who taught, in other words, that the spirit of science is criticism.

Since I have not so far said much about Pericles, and nothing at all about Democritus, I may use some of their own words in order to illustrate the new faith. First Democritus: *

Not out of fear but out of a feeling of what is right should we abstain from doing wrong. . . . Virtue is based, most of all, upon respecting the other man. . . . Every man is a little world of his own. . . . We ought to do our utmost to help those who have suffered injustice. . . . To be good means to do no wrong; and also, not to want to do wrong. . . . It is the good deed that counts, not the word! . . . The poverty of a democracy is better than the prosperity which allegedly goes with aristocracy or monarchy, just as liberty is better than slavery. . . . The wise man belongs to all countries, for the home of a great soul is the whole world. 5 To him is due also that remark of a true scientist: ;< I would rather find a single causal law than be the king of Persia! ' 29

In their humanitarian and universalistic emphasis some of these fragments of Democritus sound, although they are of earlier date, as jf^fyg^sd iSSfli^BSLui.^^^' ^ e same
impression is conveye ofomymuch more strongly, by Pericles' famous funeral oration, delivered at least half a century before the Republic was written. I have already in chapter 6 quoted two sentences from this oration, in connection with equalitarianism 30, but a few

CHAPTER IO : THE OPEN SOCIETY 163

passages may be quoted here more fully in order to give a clearer impression of its spirit: c Our political system does not compete with institutions which are elsewhere in force. We do not copy our neighbours, but try to be an example. Our administration favours the many instead of the few: this is why it is called a democracy. t The laws afford equal justice to all alike in their private disputes, but we do not ignore the claims of excellence. When a citizen distinguishes himself, then he is preferred to the public service, not as a matter of privilege, but as a reward of merit; and poverty is no bar... The freedom we enjoy extends also to ordinary life; we are not suspicious of one another, and do not feel called upon to nag our neighbour if he chooses to go his own way... But this freedom does not make us lawless. We are taught to respect the magistrates and the laws, and never to forget that we must protect the injured. And we are also taught to observe those unwritten laws whose sanction lies only in the universal feeling of what is right...
'Our city is thrown open to the world; we never expel a foreigner... We are free to live exactly as we please, and yet are always ready to face any danger... We love beauty without becoming extravagant, and we cultivate the intellect without lessening our resolution... To admit one's poverty is no disgrace with us; but we consider it disgraceful not to make an effort to avoid it. An Athenian citizen does not neglect public affairs when attending to his private business...

We consider a man who takes no interest in the state not as harmless, but as useless; and although only a few originate a policy, we are all able to judge it. We do not look upon discussion as a stumbling block in the way of political action, but as an indispensable preliminary to any wise action at all... We believe that happiness is the fruit of freedom and freedom of valour, and we do not shrink from the danger of war... To sum up, I claim that Athens is the School of Hellas, and that the individual Athenian grows up to a happy versatility and to a readiness for varied emergencies to self-reliance.'

These words are not only a eulogy on Athens; they express the true spirit of the Great Generation. They formulate the political programme of a great equalitarian individualist, of a democrat who well understands that democracy cannot be exhausted by the meaningless principle that *the people should rule*, but that it must be based on humanitarianism. At the same time, they are an expression of true patriotism, of just
pride in a city which had made it its task to set an example; which became the school, not only of Hellas, but, as we know, of mankind, for millennia past and yet to come.

Pericles' speech is not only a programme. It is also a defence, and perhaps even an attack. It reads, as I have already hinted, like a direct attack on Plato. I do not doubt that it was directed, not only against the arrested tribalism of Sparta, but also against the totalitarian ring or movement for the paternal state, the Athenian 'Society of the Friends of Laconia' (as Th. Gomperz called them in 1902). The speech is the earliest statement ever made in opposition to this kind of movement. Its importance was felt by Plato, who caricatured Pericles' oration half a century later in the passages of the Republic in which he, opposes democracy, as well as in another parody, the dialogue Menexenus. But the friends of Laconia whom Pericles attacked retaliated long before Plato. Only five or six years after Pericles' oration, a pamphlet on the Constitution of Athens was published by an unknown author, possibly Gritias, who is frequently called the 'Old Oligarch'. This ingenious pamphlet, the oldest extant treatise on political theory, is, at the same time, the oldest monument of the desertion of mankind by its intellectual leaders. It is a ruthless attack upon Athens, written no doubt
by one of
her best brains. Its central idea, an idea which became an
article of faith with Thucydides and Plato, is the close connection
between naval imperialism and democracy; and it tries to show
that there can be no compromise in a conflict between two
worlds, the worlds of democracy and of oligarchy. Only the
use of ruthless violence, of total measures, including the acquisi-
tion of allies from outside (the Spartans), can put an end to the
unholy rule of freedom. This remarkable pamphlet was to become the first of a practically infinite series of works on political
philosophy which were, openly or covertly, to repeat the same
theme down to our own day. Unwilling and unable to help mankind along their difficult path into an unknown future which
they have to create for themselves, the *educated* tried to make
them turn back into the past. Incapable of leading a new way,
they only could make themselves leaders of the perennial revolt
against freedom. And to assert their superiority by fighting against
equality became the more necessary for them since they were
unable to prove their superiority by helping the cause of human
freedom. Harsh as this judgement may sound, it is fair, I

CHAPTER IO : THE OPEN SOCIETY 165

believe, if it is applied to those intellectual leaders of the revolt
against freedom who came after the Great Generation, and
especially after Socrates. We can now try to see them against
the background of our historical interpretation,
The invention of philosophy itself can be interpreted, I think, as a reaction to the breakdown of the closed society and its magical beliefs. It is an attempt to replace the lost magical faith by a rational faith. (A significant point is that this attempt coincides with the spread of the so-called Orphic sects whose members tried to replace the lost feeling of unity by a new mystical religion.) The earliest philosophers, the three great lonians and Pythagoras, were probably quite unaware of the stimulus to which they were reacting! They were the unconscious antagonists as well as the representatives of a social revolution. The very fact that they founded schools or sects or orders, i.e. new social institutions, modelled largely after those of an idealized tribe, proves that they were reformers in the social field, and therefore, that they were reacting to certain social needs. That they reacted to these needs and to their own sense of drift, not by imitating Hesiod in inventing a historicist myth of destiny and decay, but by inventing the art of thinking rationally, is one of the inexplicable facts which stand at the beginning of our civilization. But even these rationalists reacted to the loss of the unity of tribalism in a largely emotional way. Their reasoning gives expression to their feeling of drift, to the strain of a development which was about to create our individualistic civilization. One of the oldest expressions of this strain is due to Anaximander, the second of the Ionian philosophers.
ividual existence appeared to him as injustice, as a wrongful act of usurpation, for which individuals must suffer, and do penance. The first to become conscious of the social revolution and the struggle of classes was Heraclitus. How he rationalized his feeling of drift by developing the first anti-democratic ideology and the first historicist philosophy of change and destiny, has been described in the second chapter of this book. Heraclitus was the first conscious antagonist of the open society.

Nearly all these early thinkers were labouring under a tragic and desperate strain. The only exception is perhaps the monotheist Xenophanes, who carried his burden courageously. We cannot blame them for their reactionary tendencies in the same way as we may blame their successors. The new faith of the open society, the faith in man, in equalitarian justice, and

166 PLATO ATTACKS

in human reason, was perhaps beginning to take shape, but it was not yet formulated.

The greatest contribution to this faith was to be made by Socrates, who died for it. Socrates was not a leader of Athenian democracy, like Pericles, or a theorist of the open society, like Protagoras. He was, rather, a critic of Athens and of her democratic institutions, and in this he may have borne a superficial resemblance to some of the leaders of the reaction. But
there is no need for a man who criticizes democracy and democratic institutions to be their enemy, although both the democrats he criticizes, and the totalitarians who hope to profit from any disunion in the democratic camp, are likely to brand him as such.

There is a fundamental difference between a democratic and a totalitarian criticism of democracy. Socrates’ criticism was a democratic one, and indeed of the kind that is the very life of democracy. (Democrats who do not see the difference between a friendly and a hostile criticism of democracy are themselves imbued with the totalitarian spirit. Totalitarianism certainly cannot consider any criticism as friendly, since every criticism of such an authority must challenge the principle of authority itself.)

I have already mentioned some features of Socrates’ teaching; his intellectualism, i.e. his equalitarian theory of human reason as a universal medium of communication; his stress on intellectual honesty and self-criticism; his equalitarian theory of justice, and his doctrine that it is better to be a victim of injustice than to inflict it upon others. I think it is this last doctrine which can help us best to understand the core of his teaching, his creed of individualism, his belief in the human individual as an end in himself.

The closed society and with it its creed that the tribe is everything and the individual nothing, had broken down. Individual initiative and self-assertion had become a fact.
Interest in the human individual as individual, and not only as tribal hero and saviour, had been aroused. But the philosophy of man began only with Protagoras; and the creed that there is nothing more important in our life than other individual men, the appeal to men to respect one another, and themselves, is due to Socrates.

Burnet has stressed that it was Socrates who created the conception of the soul, a conception which had such an immense influence upon our civilization. I believe that this view is largely right, although I feel that its formulation may be misleading, especially the use of the term *soul*; for Socrates seems to have kept away from metaphysical theories as much as he could. His appeal was a moral appeal, and his theory of individuality (or of the *soul*, if this word is preferred) is, I think, a moral and not a metaphysical doctrine. With this doctrine he fought, as always, against self-satisfaction and complacency. He demanded that individualism should not be merely the dissolution of tribalism, but that the individual should prove worthy of his liberation. This is why he insisted that man is not merely a piece of flesh a body. There is more in man, a divine spark, reason; and a love of truth, of kindness, humaneness, a love of beauty and of goodness. It is these that make a man's life worth
while. But if I am not merely 'body', what am I, then? You are, first of all, intelligence, was Socrates' reply. It is your reason that makes you human; that enables you to be more than a mere bundle of desires and wishes; that makes you a self-sufficient individual and entitles you to claim that you are an end in yourself. Socrates' saying 'care for your souls' is largely an appeal for intellectual honesty, just as the saying 'know thyself' is used by him to remind us of our intellectual limitations.

These, Socrates insisted, are the things that matter. And what he criticized in democracy and democratic statesmen was their inadequate realization of these things. He criticized them rightly for their lack of intellectual honesty, and for their obsession with power-politics. With his emphasis upon the human side of the political problem, he could not take much interest in institutional reform. It was the immediate, the personal aspect of the open society in which he was interested. He was wrong when he considered himself a politician; he was a teacher.

But if Socrates was, fundamentally, a protagonist of the open society, and a friend of democracy, why, it may be asked, did he mix with anti-democrats? For we know that among his companions were not only Alcibiades, who for a time went over to the side of Sparta, but also two of Plato's uncles, Critias who later became the ruthless leader of the Thirty Tyrants, and Charmides who became his lieutenant.
There is more than one reply to this question. First we are told by Plato that Socrates' attack upon the democratic politicians of his time was carried out partly with the purpose of exposing the selfishness and lust for power of the hypocritical flatterers of the people, more particularly, of the young aristocrats who posed as democrats, but who looked upon the people as mere instruments of their lust for power. This activity made him, on the one hand, attractive to some at least of the enemies of democracy; on the other hand it brought him into contact with that very type of ambitious aristocrat. And here enters a second consideration. Socrates, the moralist and individualist, would never merely attack these men. He would, rather, take a real interest in them, and he would hardly give them up without making a serious attempt to convert them. There are many allusions to such attempts in Plato's dialogues. We have reason, and this is a third consideration, to believe that Socrates, the teacher-politician, even went out of his way to attract young men and to gain influence over them, especially when he considered them open to conversion, and thought that some day they might possibly hold offices of responsibility in their city. The outstanding example is, of course, Alcibiades, singled out from his very childhood as the great future leader of the Athenian
empire. And Critias' brilliancy, ambition and courage, made him one of the few likely competitors of Alcibiades, (He co-operated with Alcibiades for a time, but later turned against him. It is not at all improbable that the temporary co-operation was due to Socrates' influence.) From all we know about Plato's own early and later political aspirations, it is more than likely that his relations with Socrates were of a similar kind. Socrates, though one of the leading spirits of the open society, was not a party man. He would have worked in any circle where his work might have benefited his city. If he took interest in a promising youth he was not to be deterred by oligarchic family connections.

But these connections were to cause his death. When the great war was lost, Socrates was accused of having educated the men who had betrayed democracy and conspired with the enemy to bring about the downfall of Athens.

The history of the Peloponnesian war and the fall of Athens is still often told, under the influence of Thucydides' authority, in such a way that the defeat of Athens appears as the ultimate proof of the dangerous weaknesses of the democratic system. But this view is merely a tendentious distortion, and the well-known facts tell a very different story. The main responsibility for the lost war rests with the treacherous oligarchs who continuously conspired with Sparta. Prominent among these were three former disciples of Socrates, Alcibiades, Critias, and Gharides. After the fall of Athens in 404 B.C. the two latter
became the

CHAPTER IO : THE OPEN SOCIETY 169

leaders of the Thirty Tyrants, who were no more than a puppet government under Spartan protection. The fall of Athens, and the destruction of the walls, are often presented as the final results of the great war which had started in 431 B.C. But in this presentation lies the main distortion, for the democrats fought on. At first only seventy strong, they prepared under the leadership of Thrasybulus and Anytus the liberation of Athens, where Critias was meanwhile killing scores of citizens; for during the eight months of his reign of terror the death-role contained * nearly a greater number of Athenians than the Peloponnesians had killed during the last ten years of war' 48. But after eight months (in 403 B.C.) Critias and the Spartan garrison were attacked and defeated by the democracies who established themselves in the Piraeus, and both of Plato's uncles lost their lives in the battle. Their oligarchic followers continued for a time the reign of terror in the city of Athens itself, but their forces were in a state of confusion and dissolution. Having proved themselves incapable of ruling, they were ultimately abandoned by their Spartan protectors, who concluded a treaty with the democrats. The peace re-established the democracy in Athens. Thus the democratic form of government had proved its superior strength under the most severe trials, and even its enemies
began to think it invincible. (Nine years later, after the battle of Cnidus, the Athenians could re-erect their walls. The defeat of democracy had turned into victory.)

As soon as the restored democracy had re-established normal legal conditions, a case was brought against Socrates. Its meaning was clear enough; he was accused of having educated the most pernicious enemies of the state, Alcibiades, Critias, and Charmides. Certain difficulties for the prosecution were created by an amnesty for all political crimes committed before the re-establishment of the democracy. The charge could not therefore openly refer to the past. And the prosecutors probably sought not so much to punish Socrates for the unfortunate political events of the past which, as they knew well, had happened against his intentions; their aim was, rather, to prevent him from continuing his teaching, which, in view of its effects, they could hardly regard otherwise than as dangerous to the state. For all these reasons, the charge was given the vague and rather meaning-less form that Socrates was corrupting the youth, that he was impious, and that he had attempted to introduce novel religious practices into the state. (The latter two charges undoubtedly expressed, however clumsily, the correct feeling that in the ethico-religious field he was a revolutionary.) Because of the amnesty, the 'corrupted youth' could not be more
precisely named, but everybody knew, of course, who was meant. In his defence, Socrates insisted that he had no sympathy with the policy of the Thirty, and that he had actually risked his life by defying their attempt to implicate him in one of their crimes.

It is now usually recognized that Anytus, the democratic leader who backed the prosecution, did not intend to make a martyr of Socrates. The aim was to exile him. But this plan was defeated by Socrates' refusal to compromise his principles. That he wanted to die, or that he enjoyed the role of martyr, I do not believe. He simply fought for what he believed to be right, and for his life's work. He had never intended to undermine democracy. In fact, he had tried to give it the faith it needed. This had been the work of his life. It was, he felt, seriously threatened. The betrayal of his former companions let his work and himself appear in a light which must have disturbed him deeply. He may have welcomed the trial as an opportunity to prove that his loyalty to his city was unbounded.

Socrates explained this attitude most carefully when he was given an opportunity to escape. Had he seized it, and become an exile, everybody would have thought him an opponent of democracy. So he stayed, and stated his reasons. This explanation, his last will, can be found in Plato's Crito. It is simple. If I go, said Socrates, I violate the laws of the state. Such an act would put me in opposition to the laws, and prove
my disloyalty. It would do harm to the state. Only if I stay can I put beyond doubt my loyalty to the state, as well as to democracy, and prove that I have never been its enemy. There can be no better proof of my loyalty than my willingness to die for it. *

Socrates' death is the ultimate proof of his sincerity. His fearlessness, his simplicity, his modesty, his sense of proportion, his humour never deserted him. ' I am that gadfly which God has attached to the city ', he said in his Apology, ' and all day long and in all places I am always fastening upon you, arousing and persuading and reproaching you. You would not readily find another like me, and therefore I should advise you to spare me . . If you strike at me, as Anytus advises you, and rashly put me to death, then you will remain asleep for the rest of your lives, unless God in his care sends you another gadfly ' 54 . He showed that a man could die, not only for fate and fame and other

CHAPTER 10 : THE OPEN SOCIETY 171

grand things of this kind, but also for the freedom of critical thought, and for a self-respect which has nothing to do with self-importance or sentimentality.

Socrates had only one worthy successor, his old friend Antisthenes, the last of the Great Generation. Plato, his most gifted disciple, was soon to prove the least faithful. He betrayed Socrates, just as his uncles had done. These, besides
betraying
Socrates, had also tried to implicate him in their terrorist acts, but they did not succeed, since he resisted. Plato tried to implicate Socrates in his grandiose attempt to construct the theory of the arrested society; and he had no difficulty in succeeding, for Socrates was dead.

I know of course that this judgement will seem outrageously harsh, even to those who are critical of Plato. But if we look upon the Apology and the Crito as Socrates' last will, and if we compare these testaments of his old age with Plato's testament, the Laws, then it is difficult to judge otherwise. Socrates had been condemned, but his death was not intended by the initiators of the trial. Plato's Laws remedy this lack of intention. Coolly and carefully they elaborate the theory of inquisition. Free thought, criticism of political institutions, teaching new ideas to the young, attempts to introduce new religious practices or even opinions, are all pronounced capital crimes. In Plato's state, Socrates would never have been given the opportunity of defending himself publicly; he would have been handed over to the secret Nocturnal Council for the 'treatment', and finally for the punishment, of his diseased soul.

I cannot doubt the fact of Plato's betrayal, nor that his use of Socrates as the main speaker of the Republic was the most successful attempt to implicate him. But it is another question whether this attempt was conscious.
In order to understand Plato we must visualize the whole contemporary situation. After the Peloponnesian war, the strain of civilization was felt as strongly as ever. The old oligarchic hopes were still alive, and the defeat of Athens had even tended to encourage them. The class struggle continued. Yet Critias' attempt to destroy democracy by carrying out the programme of the Old Oligarch had failed. It had not failed through a lack of determination; the most ruthless use of violence had been unsuccessful, in spite of favourable circumstances in the shape of powerful support from victorious Sparta. Plato felt that a complete reconstruction of the programme was needed. The

172 PLATO ATTACKS

Thirty had been beaten in the realm of power politics largely because they had offended the citizens' sense of justice. The defeat had been largely a moral defeat. The faith of the Great Generation had proved its strength. The Thirty had nothing of this kind to offer; they were moral nihilists. The programme of the Old Oligarch, Plato felt, could not be revived without basing it upon another faith, upon a persuasion which re-affirmed the old values of tribalism, opposing them to the faith of the open society. Men must be taught that justice is inequality, and that the tribe, the collective, stands higher than the individual. 66 But since Socrates' faith was too strong to be challenged openly,
Plato attempted to re-interpret it as a faith in the closed society. This was difficult; but it was not impossible. For had not Socrates been killed by the democracy? Had not democracy lost any right to claim him? And had not Socrates always criticized the anonymous multitude as well as its leaders for their lack of wisdom? It was not difficult, moreover, to re-interpret Socrates as having recommended the rule of the educated, the learned philosophers. In this interpretation, Plato was much encouraged when he discovered that it was also part of the ancient Pythagorean creed; and most of all, when he found, in Archytas of Tarentum, a Pythagorean sage as well as a great and successful statesman. Here, he felt, was the solution of the riddle. Had not Socrates himself encouraged his disciples to participate in politics? Did this not mean that he wanted the enlightened, the wise, to rule? What a difference between the crudity of the ruling mob of Athens and the dignity of an Archytas! Surely, Socrates who had never stated his solution of the constitutional problem must have had Pythagoreanism in mind, In this way Plato may have found that it was possible to give by degrees a new meaning to the teaching of the most influential member of the Great Generation, and to make use of an opponent whose overwhelming strength he would never have dared to attack directly. This, I believe, is the simplest interpretation of the fact that Plato retained Socrates as his main speaker even after he had departed so widely from his teaching that
he could no longer deceive himself about this deviation. But it is not the whole story. He felt, I believe, in the depth of his soul, that Socrates' teaching was very different indeed from this presentation, and that he was betraying Socrates. And I think that Plato's continuous efforts to make Socrates re-interpret himself are at the same time Plato's efforts to quiet his own bad con-

PLATO ATTACKS

science. By trying again and again to prove that his teaching was only the logical development of the true Socratic doctrine, he tried to persuade himself that he was not a traitor.

In reading Plato we are, I feel, witnesses of an inner conflict, of a truly titanic struggle in Plato's mind. Even his famous 6 fastidious reserve, the suppression of his own personality 58, or rather, the attempted suppression for it is not at all difficult to read between the lines is an expression of this struggle. And I believe that Plato's influence can partly be explained by the fascination of this conflict between two worlds in one soul, a struggle whose powerful repercussions upon Plato can be felt under that surface of fastidious reserve. This struggle touches our feelings, for it is still going on within ourselves. Plato was the child of a time which is still our own. (We must not forget that it is, after all, only a century since the abolition of slavery in the United States, and even less since the abolition
of serfdom in Central Europe.) Nowhere does this inner struggle reveal itself more clearly than in Plato's theory of the soul. That Plato, with his longing for unity and harmony, visualized the structure of the human soul as analogous to that of a class-divided society, shows how deeply he must have suffered.

Plato's greatest conflict arises from the deep impression made upon him by the example of Socrates, but his own oligarchic inclinations strive only too successfully against it. In the field of rational argument, the struggle is conducted by using the argument of Socrates' humanitarianism against itself. The earliest example of this kind can be found in the Euthyphro. I am not going to be like Euthyphro, Plato assures himself; I shall never take it upon myself to accuse my own father, my own venerated ancestors, of having sinned against a law and a humanitarian morality which is only on the level of vulgar piety. Even if they took human life, it was, after all, only the lives of their own serfs, who are no better than criminals; and it is not my task to judge them. Did not Socrates show how hard it is to know what is right and wrong, pious and impious? And was he not himself prosecuted for impiety by these so-called humanitarians? Other traces of Plato's struggle can, I believe, be found in nearly every place where he turns against humanitarian ideas, especially in the Republic. His evasiveness and his resort to scorn in combating the equalitarian theory of justice,
his hesitant preface to his defence of lying, to his introduction of racialism, and to his definition of justice, have all been mentioned

174 PLATO ATTACKS

in previous chapters. But perhaps the clearest expression of the conflict can be found in the Menexenus, that sneering reply to Pericles' funeral oration. Here, I feel, Plato gives himself away. In spite of his attempt to hide his feelings behind irony and scorn, he cannot but show how deeply he was impressed by Pericles' sentiments. This is how Plato makes his Socrates' maliciously describe the impression made upon him by Pericles' oration:

4 A feeling of exultation stays with me for more than three days; not until the fourth or fifth day, and not without an effort, do I come to my senses and realize where I am.' 61 Who can doubt that Plato reveals here how seriously he was impressed by the creed of the open society, and how hard he had to struggle to come to his senses and to realize where he was namely, in the camp of its antagonists.

Plato's strongest argument in this struggle was, I believe, sincere: According to the humanitarian creed, he argued, we should be ready to help our neighbours. The people need help badly, they are unhappy, they labour under a severe strain, a sense of drift. There is no certainty, no security 62 in life, when everything is in flux. I am ready to help them. But I cannot
make them happy without going to the root of the evil.

And he found the root of the evil. It is the c Fall of Man ',
the breakdown of the closed society. This discovery
convined
him that the Old Oligarch and his followers had been
fundamentally right in favouring Sparta against Athens, and
in aping
the Spartan programme of arresting change. But they had not
gone far enough; their analysis had not been carried
sufficiently
deep. They had not been aware of the fact, or had not
cared
for it, that even Sparta showed signs of decay, in
spite of its
heroic effort to arrest all change; that even Sparta
had been
half-hearted in her attempts at controlling breeding in
order to
eliminate the causes of the Fall, the * variations ' and * irregu-
larities * in the number as well as the quality of the
ruling race. 63
(Plato saw that population increase was one of the
causes of the
Fall.) Also, the Old Oligarch and his followers had
thought,
in their superficiality, that with the help of a
tyrranny, such as
that of the Thirty, they would be able to restore the
good old
days. Plato knew better. The great sociologist saw
clearly
that these tyrannies were entirely based upon, and were
them-
selves kindling, the modern revolutionary spirit; that
they were
forced to make concessions to the equalitarian cravings
of the
people; and that they had indeed played an important
part in.

CHAPTER IO : THE OPEN SOCIETY 175
the breakdown of tribalism. Plato hated tyranny. Only hatred can see as sharply as he did in his famous description of the tyrant. Only a genuine enemy of tyranny could say that tyrants must stir up one war after another in order to make the people feel the need of a general, of a saviour from extreme danger. Tyranny, Plato insisted, was not the solution, nor any of the current oligarchies. Although it is imperative to keep the people in their place, their suppression is not an end in itself. The end must be the complete return to nature, a complete cleaning of the canvas.

The difference between Plato's theory on the one hand, and that of the Old Oligarch and the Thirty on the other, is due to the influence of the Great Generation. Individualism, egalitarianism, faith in reason and love of freedom were new, powerful, and, from the point of view of the antagonists of the open society, dangerous sentiments that had to be fought. Plato had himself felt their influence, and, within himself, he had fought them. His answer to the Great Generation was a truly great effort. It was an effort to close the door which had been opened, and to arrest society by casting upon it the spell of an alluring philosophy, unequalled in depth and richness. In the political field he added but little to the old oligarchic programme against which Pericles had once argued. But he discovered, perhaps unconsciously, the great secret of the revolt against freedom, formulated in our own day by Pareto: To take
advantage of sentiments, not wasting one's energies in futile efforts to destroy them '.

Instead of showing his hostility to reason, he captured by his brilliance all intellectuals, flattering and thrilling them by his demand that the learned should rule. Instead of arguing against justice he convinced all righteous men that he was fighting for it. Not even to himself did he fully admit that he was condemning Socrates and freedom of thought; and by making Socrates his champion he persuaded all others that he was fighting for it. Plato thus became the pioneer of the many propagandists who developed the technique of appealing to moral, humanitarian sentiments, for anti-humanitarian, immoral purposes. And he achieved the somewhat surprising effect of convincing even great humanitarians of the immorality and selfishness of their creed 6e. I do not doubt that he succeeded in persuading himself. He transfigured his hatred of individual initiative, and his wish to arrest all change, into a love of justice and temperance, of a beautiful state in which everybody is satisfied and happy and in which the crudity of money-grabbing 67 is replaced by laws of generosity and friendship. This dream of unity and beauty and perfection, this aestheticism and holism and collectivism, is the product as well as the symptom of the lost group spirit of tribalism 68. It is the expression of, and an ardent
appeal to, the sentiments of those who suffer from the strain of civilization. (It is part of the strain that we are becoming more and more painfully aware of the gross imperfections in our life, of personal as well as of institutional imperfection; of waste and unnecessary ugliness; and at the same time of the fact that it is not impossible for us to do something about all this, but that such improvements would be just as hard to achieve as they are important. This awareness increases the strain of personal responsibility, of carrying the cross of being human.)

Socrates had refused to compromise his personal integrity. Plato, with all his uncompromising canvas cleaning, was led along a path on which he compromised his integrity with every step he took. He was forced to combat free thought, and the pursuit of truth. He was led to defend lying, political miracles, tabooistic superstition, the suppression of truth, and ultimately, brutal violence. In spite of Socrates' warning against misanthropy, he was led to distrust man. In spite of his own hatred of tyranny, he was led to look to a tyrant for help, and to defend the most tyrannical measures. The internal logic of his anti-humanitarian aim, the internal logic of power, led him unawares to the same point to which once the Thirty had been led, and at which, later, his friend Dio arrived, and his other tyrant-disciples 60. He did not succeed in arresting society. (Only much later, in the dark ages, was it arrested by the spell of essentialism). Instead, he succeeded in binding
himself, by
his own spell, to powers which once he had hated.

The lesson which we thus should learn from Plato is the exact opposite of what he tries to teach us. It is a lesson which must not be forgotten. Excellent as Plato's sociological diagnosis was, his own development of it proves that the therapy he recommended is worse than the evil he tried to combat. Arresting political change is not the remedy; it cannot bring happiness. We can never return to the alleged innocence and beauty of the closed society. Our dream of heaven cannot be realized on earth. Once we begin to rely upon our reason, and to use our powers of criticism, once we feel the call of personal responsibilities, and with it, the responsibility of helping to advance knowledge,

CHAPTER 10 : THE OPEN SOCIETY 177

we cannot return to a state of implicit submission to tribal magic. For those who have eaten from the tree of knowledge, paradise is lost. The more we try to return to tribal heroism, the more surely do we arrive at the Inquisition, at the Secret Police, and at a romanticized gangsterism. Beginning with the suppression of reason and truth, we must end with the most brutal and violent destruction of all that is human. There is no return to a harmonious state of nature. If we turn back, then we must go the whole way we must return to the beasts.

It is an issue which we must face squarely, hard though it
may be for us to do so. If we dream of a return to our child-
hood, if we are tempted to rely on others and so be happy, if
we turn back from the task of carrying our cross, the cross of
humaneness, of reason, of responsibility, if we lose courage and
flinch from the strain, then we must try to fortify ourselves with
a clear understanding of the simple decision before us. We can
return to the beasts. But if we wish to remain human,
then there is only one way, the way into the open society. We must
go on into the unknown, courageously, using what reason we
have, to plan for security and freedom.

NOTES

GENERAL REMARKS. The text of the book is self-contained
and may be read without these Notes. However, a considerable
amount of material which is likely to interest all readers of the book
will be found here, as well as some references and controversies which may not be
of general interest. Readers who wish to consult the Notes for the sake of this material may find it convenient first to read without interruption through the text of a chapter, and then to turn to the Notes.

I wish to apologize for the perhaps excessive number of cross references which have been included for the benefit of those readers who take a special interest in one or the other of the side issues touched upon (such as Plato's preoccupation with racialism, or the Socratic Problem). Knowing that war conditions would make it impossible for me to read the proofs, I decided to refer not to pages but to note numbers. Accordingly,
references to the
text have been indicated by notes such as: * cp. text
to note 24 to chapter 3',
etc. War conditions also restricted library facilities,
making it impossible for
me to obtain a number of books, some recent and some
not, which would
have been consulted in normal circumstances.

NOTE TO THE INTRODUCTION

The terms * open society ' and ' closed society ' were
first used, to my know-
ledge, by Henri Bergson, in Two Sources of Morality and
Religion (Engl. cd.,
I 935) - I n spite of a considerable difference (due to
a fundamentally
different approach to nearly every problem of
philosophy) between Bergson's
way of using these terms and mine, there is a certain
similarity also, which
I wish to acknowledge. (Cp. Bergsoii's characterization
of the closed society,
op. cit., p, 229, as * human society fresh from the
hands of nature '.) The
main difference, however, is this. My terms indicate,
as it were, an
intellectualist distinction ; the closed society is
characterized by the belief in
magical taboos, while the open society is one in which
men have learned to
be to some extent critical of taboos, and to base
decisions on the authority of
their own intelligence. Bergson, on the other hand, has
a kind of religious
distinction in mind. This explains why he can look upon
his open society as
the product of a mystical intuition, while I suggest
(in chapters 10 and 24)
that mysticism may be interpreted as an expression of
the longing for the lost
unity of the closed society, and therefore as a
reaction against the rationalism
of the open society. From the way my term c The Open
Society ' is used in
chapter 10, it may be seen that there is some
resemblance to Graham Wallas'
term * The Great Society J ; but my term may cover a ' small society ' too,
as it were, like that of Peri clean Athens, while it is perhaps conceivable that a 'Great Society' may be arrested and thereby closed. There is also, perhaps, a similarity between my 'open society' and the term used by Walter Lippmann as the title of his most admirable book, The Good Society (1937). See also notes 59 (2) to chapter 10 and notes 29, 32, and 58 to chapter 24, and text.

NOTES TO CHAPTER 1

1 I use the term 'collectivism' only for a doctrine which emphasizes the significance of some collective or group, for instance, *the state* (or a certain state; or a nation; or a class) as against that of the individual. The problem collectivism versus individualism is explained more fully in chapter 6, below; see especially notes 26 to 28 to that chapter, and text. Concerning *tribalism,*

178

CHAPTER 2/NOTES 1-2 179

cp. chapter 10, and especially note 38 to that chapter (list of Pythagorean tribal taboos).

2 This means that the interpretation does not convey any empirical information, as shown in my Logik der Forschung (1935).

3 One of the features which the doctrines of the chosen people, the chosen race, and the chosen class have in common is that they originated, and became important, as reactions against some kind of oppression. The doctrine of the chosen people became important at the time of the foundation of the Jewish church, i.e. during the Babylonian captivity; Count Gobineau's theory of
the Aryan master race was a reaction of the aristocratic emigrant to the claim that the French Revolution had successfully expelled the Teutonic masters. Marx's prophecy of the victory of the proletariat is the reply to one of the most sinister periods of oppression and exploitation in modern history. Compare with these matters chapter 10, especially note 39, and chapter 17, especially notes 13-15, and text.

NOTES TO CHAPTER 2

1 The question * What is the world made of is more or less generally accepted as the fundamental problem of the early Ionian philosophers. If we assume that they viewed the world as an edifice, the question of the ground-plan of the world would be complementary to that of its building material. And indeed, we hear that Thales was not only interested in the stuff the world is made of, but also in descriptive astronomy and geography, and that Anaximander was the first to draw up a ground-plan, i.e. a map of the earth. Some further remarks on the Ionian school (and especially on Anaximander as predecessor of Heraclitus) will be found in chapter 10; cp. notes 38-40 to that chapter, especially note 39.

2 Cp. Plato, Cratylus, 40 id, 402a/b. My interpretation of the teaching of Heraclitus is perhaps different from that commonly assumed at present, for instance from that of Burnet. Those who may feel doubtful whether it is at all tenable, are referred to my notes, especially the present note and notes 6, 7, and 11, in which I am dealing with Heraclitus' natural philosophy, having confined my text to a presentation of the historicist aspect of Heraclitus' teaching and to his social philosophy. I further refer them to the evidence of chapters 4 to 9, and especially of chapter 10, in whose
light Heraclitus' philosophy, as I see it, will appear as a rather typical reaction to the social revolution which he witnessed. Cp. also the notes 39 and 59 to that chapter (and text), and the general criticism of Burnet's and Taylor's methods in note 56.

As indicated in the text, I hold (with many others, for instance, with Zeller and Grote) that the doctrine of universal flux is the central doctrine of Heraclitus. As opposed to this, Burnet holds that this 'is hardly the central point in the system' of Heraclitus (cp. Early Greek Philosophy', 2nd ed., 163). But a close inspection of his arguments (158 f.) leaves me quite unconvinced that Heraclitus' fundamental discovery was the abstract metaphysical doctrine *that wisdom is not the knowledge of many things, but the perception of the underlying unity of warring opposites', as Burnet puts it. The unity of opposites is certainly an important part of Heraclitus' teaching, but it can be derived (as far as such things can be derived; cp. note 11 to this chapter, and the corresponding text) from the more concrete and intuitively understandable theory of flux; and the same can be said of Heraclitus' doctrine of the fire (cp. note 7 to this chapter).

Those who suggest, with Burnet, that the doctrine of universal flux was not new, but anticipated by the earlier lonians, are, I feel, unconscious witnesses to Heraclitus' originality; for they fail now, after 2,400 years, to grasp his main point. They do not see the difference between a flux or circulation within a vessel or an edifice or a cosmic
framework, i.e. within a
totality of things (part of the Heraclitean theory can
indeed be understood in
this way, but only that part of it which is not very
original; see below),
and a universal flux which embraces everything, even
the vessel, the framework
itself, and which is described by Heraclitus' denial of
the existence of any
fixed thing whatever. (In a way, Anaximander had made a
beginning by
dissolving the framework, but there was still a long
way from this to the theory
of universal flux. Cp. also note 15 (4) to chapter 3.)

The doctrine of universal flux forces Heraclitus to
attempt an explanation
of the apparent stability of the things in this world,
and of other typical
regularities. This attempt leads him to the development
of subsidiary theories,
especially to his doctrine of fire (cp. note 7 to this
chapter) and of natural
laws (cp. note 6). It is in this explanation of the
apparent stability of the
world that he makes much use of the theories of his
predecessors by developing
their theory of rarefaction and condensation, together
with their doctrine of
the revolution of the heavens, into a general theory of
the circulation of matter,
and of periodicity. But this part of his teaching, I
hold, is not central to it,
but subsidiary. It is, so to speak, apologetic, for it
attempts to reconcile the
new and revolutionary doctrine of flux with common
experience as well as
with the teaching of his predecessors. I believe,
therefore, that he is not a
mechanical materialist who teaches something like the
conservation and
circulation of matter and of energy; this view seems
to me to be excluded by
his magical attitude towards laws as well as by his
theory of the unity of
opposites which emphasizes his mysticism.

My contention that the universal flux is the central
theory of Heraclitus
is, I believe, corroborated by Plato. The overwhelming
majority of his
explicit references to Heraclitus (Crat., 40 id,
402a/b, 411, 437 ff., 440; Theaet.,
J 53c/d, i6od, i77c, i7gd f., i8aa ff., i83a ff., cp.
also Syrnp., 207d, Phil.,
43a; cp. also Aristotle's Metaphysics, 987333,
1010313, 1078^3) witness to
the tremendous impression made by this central doctrine
upon the thinkers
of that period. These straightforward and clear
testimonies are much
stronger than the admittedly interesting passage which
does not mention
Heraclitus' name (Soph., 242d f., quoted already, in
connection with Heraclitus,
by Ueberweg and Zeller), on which Burnet attempts to
base his interpretation.
(His other witness, Philo Judaeus, cannot count much as
against the evidence
of Plato and Aristotle.) But even this passage agrees
entirely with our
interpretation. (With regard to Burnet's somewhat
wavering judgement
concerning the value of this passage, cp. note 56 (7)
to chapter i o.) Heraclitus'
discovery that the world is not the totality of things
but of events or facts is not
at all trivial; this can be perhaps gauged by the fact
that Wittgenstein has
found it necessary to reaffirm it quite recently: '
The world is the totality
of facts, not of things. 9 (Cp. Tractatus Logico-
Philosophicus, 1921/22, sentence
i.i; italics mine.)

To sum up. I consider the doctrine of universal flux as
fundamental, and
as emerging from the realm of Heraclitus' social
experiences. All other
doctrines of his are in a way subsidiary to it. The
doctrine of fire (cp.
Aristotle's Metaphysics, 98437, io67a2; also 98932,
99639, 1001315) I consider
to be his central doctrine in the field of natural
philosophy; it is an attempt
to reconcile the doctrine of flux with our experience
of stable things, a link
with the older theories of circulation, and it leads to
a theory of laws. And
the doctrine of the unity of opposites I consider as
something less central
and more abstract, as a forerunner of a kind of logic or methodological
type (as such it inspired Aristotle to formulate his
law of contradiction),
and as linked to his mysticism.

8 W. Nestle, Die Vorsokratiker (1905), 35.

CHAPTER 2 /NOTES 4-7 181

4 In order to facilitate the identification of the
fragments quoted, I give
the numbers of Bywater's edition (adopted, in his
English translation of the
fragments, by Burnet, Early Greek Philosophy), and also
the numbers of Diels'
edition (Diels, Vorsokrakike r; I am quoting from the
2nd edition).

Of the eight passages quoted in the present paragraph,
(i) and (2) are
from the fragments B 114 (= By water, and Burnet), D 2
121 ( Diels, .
2nd edition). The others are from the fragments: (3) B
in, D a 29;
cp. Plato's Republic, 5&6a/b . . . (4) : B in, D a 104
. . . . (5) : B 112,
D 2 39 . . . (6) : B 5, D a 17 . . . (7) : B no, D 2 33
... (8) : B 100,
D 2 44.

5 The three passages quoted in this paragraph are from
the fragments:
(i) and (2) : cp. B 41, D 2 91 ; for (i) cp. also note
2 to this chapter. (3) :
D 2 74.

6 For Heraclitus' ' measures * (or laws, or periods),
cp. B 20, 21, 23, 29 ;
D 2 30, 31, 94.

This idea of law is correlative to that of change or
flux, since only laws or
regularities within the flux can explain the apparent
stability of the world.
The most typical regularities within the changing world
known to man are
the natural periods : the day, the moon-month, and the
year (the seasons).
Heraclitus' theory of law is, I believe, logically
intermediate between the
comparatively modern views of ' causal laws ' (held by
Leucippus and
especially by Democritus) and Anaximander's dark powers
of fate. Heraclitus'
laws are still ' magical ', i.e. he has not yet
distinguished between abstract
causal regularities and laws enforced, like taboos, by
sanctions (with this,
cp. chapter 5, note 2). It appears that his theory of
fate was connected with
a theory of a ' Great Year ' or ' Great Cycle ' of
18,000 or 36,000 ordinary
years. (Cp. for instance J. Adam's edition of The
Republic of Plato, vol. II,
303.) I certainly do not think that this theory is an
indication that Heraclitus
did not really believe in a universal flux, but only in
various circulations which
always re-established the stability of the framework ;
but I think it possible
that he had difficulties in conceiving a law of change,
and even of fate, other
than one involving a certain amount of periodicity.
(Cp. also note 6 to
chapter 3.)

7 The four passages quoted in this paragraph are from
the fragments,
(i) : D a 58, 8. (Cp. Diog. Laert., IX., 7) . . . (2) :
B 29, D 2 94 (cp. note
2 to chapter 5) . . . (3) : B 20, D 2 30 . . . (4) : B 26,
D 2 66.

Fire plays a central rdle in Heraclitus' philosophy of
nature. The flame
is the obvious symbol of a flux or process which
appears in many respects as a thing.
It thus explains the experience of stable things, and
reconciles this experience
with the doctrine of flux. This idea can be easily
extended to living bodies
which are like flames, only burning more slowly.
Heraclitus teaches that all things are in flux, all are like fire; their flux has only different 'measures' or laws of motion. The 'bowl' or 'trough' in which the fire burns will be in a much slower flux than the fire, but it will be in flux nevertheless. It changes, it has its fate and its laws, it must be burned into by the fire, and consumed, even if it takes a longer time before its fate is fulfilled. Thus, 'in its advance, the fire will judge and convict everything'.

Accordingly, the fire is the symbol and the explanation of the apparent rest of things in spite of their real state of flux. But it is also a symbol of the transmutation of matter from one stage (fuel) into another. It thus provides the link between Heraclitus' intuitive theory of nature and the theories of rarefaction and condensation etc., of his predecessors. But its flaring up and dying down, in accordance with the measure of fuel provided, is also an instance of a law. If this is combined with some form of periodicity, then it can be used to explain the regularities of natural periods, such as days or years.

(This trend of thought renders it unlikely that Burnet is right in disbelieving the traditional reports of Heraclitus' belief in a periodical conflagration, which was probably connected with his Great Year.)

8 The thirteen passages quoted in this paragraph are from the fragments.

(1) : B 10, D 2 123 ... (2) : B u, D 2 9 3 . . . (3) : B 16, D 2 40 . . . (4) : B 94, D 2 73 . . . (5) : B 95, D 2 89 ... with (4) and (5), cp. Plato's Republic, 47 6c f., and 5 2oc . . . (6) : B 6, D 2 19 . . . (7) :
B 3, D 2 34 . . . (8) :
B 19, D 2 41 ... (9) : B 92, D 2 2 ... (10) : B gia, D 2 113 ... (n) :
B 59, D 3 10 ... (12) : B 65, D 2 32 ... (13) : B 28, D 2 64.

9 More consistent than most moral historicists, Heraclitus is also an ethical and juridical positivist (for this term, cp. chapter 5) :
' All things are, to God, fair and good and right; men, however, hold that some are wrong and some right.' (D 2 1 02, B 61.) That he was the first juridical positivist is attested by Plato (Theaetetus, lyjc/d). On moral and juridical positivism in general, cp. chapter 5 (text to notes 14-18) and chapter 22.

10 The two passages quoted in this paragraph are : (i) : B 44, D 2 53 . . .
(2) : B 62, D 2 80.

11 The seven passages quoted in this paragraph are :
(i) : B 39, D 2 126 ... (2) : B 104, D 2 in ... (3) : B 78, D 2 88 ... (4) : B 69, D 2 60 ... (5) : B 45, D 2 51 . . . (6) : D 2 8 . . . (7) : B 57, D 2 58.

Flux or change must be the transition from one stage or property or position to another. In so far as flux presupposes something that changes, this something must remain identically the same, even though it assumes an opposite stage or property or position. This links the theory of flux to that of the unity of opposites (cp. Aristotle, Metaphysics, ioo5b25, i024a24 and 34, io62a32, io63a25) as well as the doctrine of the oneness of all things; they are all only different phases or appearances of the one changing something (of fire).

Whether' the path that leads up ' and * the path that leads down ' were originally conceived as an ordinary path leading first
up a mountain, and
later down again (or perhaps: leading up from the
point of view of the man
who is down, and down from that of the man who is up),
and whether this
metaphor was only later applied to the processes of
circulation, to the path
that leads up from earth through water (perhaps liquid
fuel in a bowl?) to
the fire, and clown again from the fire through the
water (rain?) to earth;
or whether Heraclitus' path up and down was originally
applied by him to
this process of circulation of matter; all this can of
course not be decided.
(But I think that the first alternative is more likely
in view of the great number
of similar ideas in Heraclitus' fragments: cp. the
text.)

1 2 The four passages are: (i): B 102, D 2 24 . . .
(2): Bioi, D 2 25

(3): B in, D 2 29 (part of the continuation is quoted
above; see passage
(3) in note 4) . . . (4): B 113, D 2 49.

13 It seems very probable (cp. Meyer's Gesch. d.
Altertums, esp. vol. I) that
such characteristic teachings as that of the chosen
people originated in this
period, which produced several other religions of
salvation besides the Jewish.

14 Comte, who in France developed a historicist
philosophy not very
dissimilar from Hegel's Prussian version, tried, like
Hegel, to stem the revolu-
tionary tide. (Cp. F. A. von Hayek, The Counter-
Revolution of Science, Economica,
N.S. vol. VIII, 1941, pp. ngff., 281 ff.) It is
interesting to note, in this
connection, the parallelism between the history of
historicist and of evolutionary
ideas. They originated in Greece with the semi-
Heraclitean Empedocles
(for Plato's version, see note i to chapter n), and
they were revived, in
England as well as in France, in the time of the French
NOTES TO CHAPTER 3

1 With this explanation of the term oligarchy, cp. also the end of notes 44 and 57 to chapter 8.

2 Cp. especially note 48 to chapter 10.

3 Cp. the end of chapter 7, esp. note 25, and chapter 10, esp. note 69.

4 Concerning Plato's family connections, and especially the alleged descent of his father's family from Codrus, ' and even from the God Poseidon ', see G. Grote, Plato and other Companions of Socrates (ed. 1875), vol. I, 114. (See, however, the similar remark on Critias' family, i.e. on that of Plato's mother, in E. Meyer, Geschichte des Altertums, vol. V, 1922, p. 66.)

5 The two autobiographical quotations which follow in this paragraph are from the Seventh Letter (325). Since Plato's authorship of the Letters has been questioned by some eminent scholars (probably without sufficient foundation; I think Field's treatment of this problem very convincing; cp. note 57 to chapter 10), I have taken care to base my interpretation of Platonism mainly on some of the most famous dialogues; it is, however, in general agreement with the Letters. For the reader's convenience, a list of those Platonic dialogues which are frequently mentioned in the text may be given here, in what is their probable historical order; cp. note 56 (8) to ch. 10. Crito Apology Eutyphro; Protagoras Meno Gorgias; Cratylus Menexenus Phaedo; Republic Theaetetus; Sophist Politicus Philebus;
That historical developments may have a cyclic character is nowhere clearly stated by Plato. It is, however, alluded to in at least three dialogues, namely in the Phaedo, in the Republic, and in the Statesman (or Politicus). In all these places, Plato's theory may possibly allude to Heraclitus' Great Year (cp. note 6 to chapter 2). It may be, however, that the allusion is not to Heraclitus directly, but rather to Empedocles, whose theory (cp. also Aristotle, Met., 100325 f.) Plato considered as merely a 'milder version of the Heraclitean theory of the unity of all flux. He expresses this in a famous passage of the Sophist (2426 f.) According to this passage, and to Aristotle (De Gen. Corr. 9 B, 6., 334a6) there is a historical cycle embracing a period in which love rules, and a period in which Heraclitus' strife rules; or as Aristotle puts it, the present period is according to Empedocles 'a period of Strife, as it was formerly one of Love'. This insistence that the flux of our own cosmic period is a kind of strife, and therefore bad, is in close accordance both with Plato's theories and with his experiences.

The passage in the Phaedo mentioned under (i) alludes first to the Heraclitean theory of change leading from one state to its opposite state, or from one opposite to the other: 'that which becomes less must once have been greater...'. (706/71 a). It then proceeds to indicate a cyclic law of development: *Are there not two processes which are ever going on, from one extreme to its opposite, and back again...?* (loc. cit.). And a little later (72a/b) the argument is put like this: *If the development were in a straight line only, and there were no compensation or cycle in nature, ... then, in the end, all things would take on the same properties.*
. and there would be
no further development.' It must be said that the
general tendency of the
Phaedo is much more optimistic (and shows much more
faith in man and in
human reason) than the later dialogues, but there are
no direct references to
human historical development.

(3) Such references are, however, made in the Republic,
where in Books
VIII and IX we find an elaborate description of
historical decay (treated
here in chapter 4). This description is introduced by
Plato's Story of the Fall
of Man and the Number, which will here be discussed
more fully in chapters
5 and 8. J. Adam, in his edition of The Republic of
Plato (1902, 1921) rightly
calls this story * the setting in which Plato's "
Philosophy of History " is

184 CHAPTER 3/NOTES 7-8

framed ' (vol. II, 210). This story does not contain
any explicit statement on
the cyclic character of history, but it contains a few
rather mysterious hints
which, according to Aristotle's (and Adam's)
interesting but uncertain
interpretation, are possibly allusions to the
Heraclitean Great Year, i.e. to
the cyclic development. (Gp. note 6 to chapter 2, and
Adam, op. cit., vol.
H> 33 > the remark on Empedocles made there, 303 f.,
needs correction ;
see (i) in this note, above).

(4) There is, furthermore, the myth in the Politicus
(2686-2746). Accord-
ing to this myth, God himself steers the world for half
a cycle of the great
world period. When he lets go, then the world, which so
far has moved
forward, begins to roll back again. Thus we have two
half-periods or half-
cycles in the full cycle, a forward movement led by God
constituting the good
period without war or strife, and a backward movement
when God abandons
the world, which is a period of increasing
disorganization and strife. It is,
of course, the period in which we live. At last, things
become so bad that
God takes the wheel again, and reverses the motion, in
order to save the world
from utter destruction.

This myth shows great resemblances to Empedocles' myth
mentioned
in (i) above, and probably also to Heraclitus* Great
Year. Adam (op. cit. 9
vol. II, 296 f.) also points out the similarities with
Hesiod's story.

(5) When, however, later in the Politicus (302b ff.)
the six forms of imperfect
government are ordered according to their degree of
imperfection, there is no
indication any longer to be found of a cyclic theory of
history. Rather, the
six forms, which are all degenerate copies of the
perfect or best state (cp. Pol.
293d /c ; 297C ; 303b), appear all as steps in the
process of degeneration ; i.e.
where it comes to more concrete historical problems,
Plato confines himself
to the part of the cycle which is retrogressive or
leading to decay.

(6) Apart from these scanty allusions, there is hardly
anything to indicate
that Plato took the upward or forward part of the cycle
seriously. But there
are many remarks, apart from the elaborate description
in the Republic and
that quoted in (5), which show that he believed very
seriously in the downward
movement, in the decay of history. We must consider,
especially, the Timaeus,
and the Laws.

(7) In the Timaeus (42b f., goe ff., and especially 9
id f. ; cp. also the Phaedrus,
248d), Plato describes what may be called the origin of
species by degeneration
Man degenerates into woman, and later into lower animals.

(8) In Book III of the Laws (cp. also Book IV, 7133 ff.; see however the short allusion to a cycle in 676b/c) we have a rather elaborate theory of historical decay, largely analogous to that in the Republic; see also the next chapter, esp. notes 3, 6, 7, 27, 31, and 44.

7 A similar opinion of Plato's political aims is expressed by G. G. Field, Plato and His Contemporaries (1930), p. 91: 'The chief aim of Plato's philosophy may be regarded as the attempt to re-establish standards of thought and conduct for a civilization that seemed on the verge of dissolution.' See also note 3 to chapter 6, and text.

8 I follow the majority of the older and a good number of contemporary authorities (e.g. G. G. Field, F. M. Cornford, A. K. Rogers) in believing, against John Burnet and A. E. Taylor, that the theory of Forms or Ideas is nearly entirely Plato's, and not Socrates', in spite of the fact that Plato puts it into the mouth of Socrates as his main speaker. Though Plato's dialogues are our only first-rate source for Socrates' teaching, it is, I believe, possible to distinguish in them between 'Socratic', i.e. historically true, and 'Platonic' features of Plato's speaker 'Socrates'. The so-called Socratic Problem is further discussed in chapters 6, 7, 8, and 10; cp. especially note 56 to chapter 10.

of my own book was written; my term "social engineering" is, accordingly, used without any intention of alluding to Eastman's terminology. As far as I can see, he advocates the approach which I criticize in chapter 9 under the name "Utopian social engineering"; cp. note i to that chapter. See also note 18 (3) to chapter 5.

The term "social technology" has been suggested to me by G. G. F. Simkin. I wish to make it clear that in discussing method, my main emphasis is upon gaining practical institutional experience. Cp. chapter 9, esp. text to note 8 to that chapter. For a more detailed analysis of the problems of method connected with social engineering and social technology, see the critical part of my Poverty of Historicism, Economica, 1944/45.

10 Cp. the last note to this chapter, and note i to chapter 9.

11 I believe in a dualism of facts and decisions or demands (or of "is" and "ought"); in other words, I believe in the impossibility of reducing decisions or demands to facts, although they can, of course, be treated as facts. More on this point will be said in chapters 5 (text to notes 4-5), 22, and 24.

12 Evidence in support of this interpretation of Plato's theory of the best state will be supplied in the next three chapters; I may refer, in the meanwhile, to Politicus, 293d/e; 2970; Laws, JI^b/c; 7390! /e.

13 Cp. Aristotle's famous report, partly quoted later in this chapter (see especially note 25, and the text).

14 This is shown in Grote's Plato, vol. Ill, note u on
15 The quotations are from the Timaeus, 50c/d and 51e-52b. The simile which describes the Forms or Ideas as the fathers, and Space as the mother, of the sensible things, is important and has far-reaching connections. Gp. also notes 17 and 19 to this chapter, and note 59 to chapter 10.

(1) It resembles Hesiod's myth of chaos, the yawning gap (space ; receptacle) which corresponds to the mother, and the God Eros, who corresponds to the father or to the Ideas. Chaos is the origin, and the question of the causal explanation (chaos = cause) remains for a long time one of origin (arche) or birth or generation.

(2) The mother or space corresponds to the indefinite or boundless of Anaximander and of the Pythagoreans. The Idea which is male, must therefore correspond to the definite (or limited) of the Pythagoreans. For the definite, as opposed to the boundless, the male, as opposed to the female, the light as opposed to the dark, and the good as opposed to the bad, all belong to the same side in the Pythagorean table of opposites. (Gp. Aristotle's Metaphysics, 986a22 f.) We also can therefore expect to see the Ideas associated with light and goodness. (Gp. end of note 32 to chapter 8.)

(3) The Ideas are boundaries or limits, they are definite, as opposed to indefinite Space, and impress or imprint (cp. note 17 (2) to this chapter) themselves like rubber-stamps, or better, like moulds, upon Space (which is not only space but at the same time Anaximander's unformed matter stuff without property), thus generating sensible things.
(4) In consequence of the act of generation, Space, i.e. the receptacle, begins to labour, so that all things are set in motion, in a Heraclidean or Empedoclean flux which is really universal in so far as the movement or flux extends even to the framework, i.e. (boundless) space itself. (For the late Heraclitean idea of the receptacle, cp. the Cratylus, 412d.)

(5) This description is also reminiscent of Parmenides* Way of Delusive Opinion ', in which the world of experience and of flux is created by the mingling of two opposites, the light (or hot or fire) and the dark (or cold or earth). It is clear that Plato's Forms or Ideas would correspond to the former, and space or what is boundless to the latter; especially if we consider that Plato's pure space i also indeterminate matter.

(6) The opposition between the determinate and indeterminate seems also to correspond, especially after the discovery of the irrationality of the square root of two, to the opposition between the rational and the irrational. But since Parmenides identifies the rational with being, this would lead to an interpretation of space or the irrational as non-being. In other words, the Pythagorean table of opposites is to be extended to cover rationality, as opposed to irrationality, and being, as opposed to non-being. (This would explain Aristotle's remark in Metaphysics, g86b27; and it would perhaps not be necessary to assume, as F. M. Cornford does in his excellent article ' Parmenides' Two Ways ', Class. Quart., XVII, 1933, p.
108, that Parmenides, fr. 8, 53/54, * has been misinterpreted by Aristotle and Theophrastus ; for if we expand the table of opposites in this way, Cornford’s most convincing interpretation of the crucial passage of fr. 8 becomes compatible with Aristotle’s remark.

(7) Cornford has explained (op. cit., 100) that there are three ' ways ' in Parmenides, the way of Truth, the way of Not-being, and the way of Seeming (or, if I may call it so, of delusive opinion). He shows (101) that they correspond to three regions discussed in the Republic, the perfectly real and rational world of the Ideas, the perfectly unreal, and the world of opinion (based on the perception of things in flux). He has also shown (102) that in the Sophist, Plato modifies his position. To this, some comments may be added from the point of view of the passages in the Timaeus to which this note is appended.

(8) The main difference between the Forms or Ideas of the Republic and those of the Timaeus is that in the former, the Forms (and also God ; cp. Rep., 380d) are petrified, so to speak, while in the latter, they are deified. In the former, they bear a much closer resemblance to the Parmenidean One (cp. Adam’s note to Rep., 380d28, 31), than in the latter. This development leads to the Laws, where the Ideas are largely replaced by souls. The decisive difference is that the Ideas become more and more the starting points, or even causes, of motion, or as the Timaeus puts it, fathers of the moving things. The greatest contrast is perhaps between the Phaedo, 796 : ' The soul is infinitely more like the unchangeable ; even the most stupid person would not deny that ' (cp. also Rep., 585^ 600,b f.) and the Laws, 8956 /8g6a (cp. Phaedrus, 245C ff.) : ' What is the definition of that which is
named "soul"? Can we imagine any other definition than... "The motion that moves itself"?
(Cp. also note 7 to chapter 4.)

(9) In this development of Plato's thought, a development whose driving force is to explain the world of flux with the help of the Ideas, i.e. to make the break between the world of reason and the world of opinion at least understandable, even though it cannot be bridged, the Sophist seems to play a decisive role. Apart from making room, as Cornford mentions (op. cit. 9 102), for the plurality of Ideas, it presents them, in an argument against Plato's own earlier position (248a ff.) (a) as active causes, which may interact, for example, with mind; (b) as unchanging in spite of that; (c) as capable of mingling with one another. It further introduces 'Not-being', identified in the Timaeus with Space (cp. Cornford, Plato's Theory of Knowledge, 1935, note to 247), and thus makes it possible for the Ideas to mingle with it (cp. also Philolaus, fragm. 2, 3, 5, Diels a), and to produce the world of flux with its characteristic intermediate position between the being of Ideas and the not-being of Space or matter.

(10) Ultimately, I wish to defend my contention in the text that the Ideas are not only outside space, but also outside time, though they are in contact with the world at the beginning of time. This, I believe, makes it easier to understand how they act without being in motion; for all motion or

CHAPTER 3 /NOTES 1 6-2 2 187

flux is in space and time. Plato, I believe, assumes that time has a beginning. I think that this is the most direct interpretation of
Laws, 72 ic: * the race
of man is twin-born with all time’, considering the
many indications that
Plato believed man to be created as one of the first
creatures. (In this point,
I disagree slightly with Cornford, Plato’s Cosmology,
26 f.)

(n) To sum up, I believe that the passages quoted from
the Timaeus are
a mature formulation of the theory of Ideas, freed from
certain difficulties of
its earlier form (e.g. from the argument of the ‘Third
Man’), but retaining
its characteristic features; the Ideas are earlier and
better than their changing
and decaying copies, and are themselves not in flux.

16 Gp. note 4 to this chapter.

17 (i) The role of the gods in the Timaeus is similar
to the one described
in the text. Just as the Ideas stamp out things, so the
gods form the bodies
of men. Only the human soul is created by the Demiurge
himself, the creator
of world, gods, and Ideas. (For another hint that the
gods are patriarchs,
see Laws, 713c/d.) Men, the weak, degenerate children
of gods, are then
liable to further degeneration; cp. note 6 (7) to this
chapter, and 37-41 to
chapter 5.

(2) In an interesting passage of the Laws (68 ib; cp.
also note 32 (i, a)
to chapter 4) we find another allusion to the
parallelism between the relation
Idea things and the relation parent children. In this
passage, the origin of
law is explained by the influence of tradition, and
more especially, by the
transmission of a rigid order from the parents to the
children; and the
following remark is made: ‘And they (the parents)
would be sure to imprint
upon their children, and upon their children’s
children, their own way of
thinking.'

18 Cp. note 49, especially (3), to chapter 8.

19 Cp. Timaeus, 31 a. The term which I have freely translated by ' superior thing which is their prototype ' is a term often used later by Aristotle with the meaning ' universal ' or ' generic term '. It means a ' thing which is general ' or ' surpassing ' or * embracing '; and I suspect that it originally means ' embracing ' or * covering ' in the sense in which a mould embraces or covers what it moulds.

20 Cp. Republic, 597c. See also 596a (and Adam's second note to 596a5) : ' For we are in the habit, you will remember, of postulating a form or Idea one for each group of many particular things to which we apply the same name.'

21 There are innumerable passages in Plato; I mention only the Phaedo (e.g. 79a), the Republic, 544%, the Theaetetus (249b/c), the Timaeus (28b/c, 29C/d, 5 id, f.). Aristotle mentions it for instance in Metaphysics, 98^32 ; 999 a 25~999bio ; ioioa6-i5 ; i078bi5 ; see also notes 23 and 25 to this chapter.

22 Parmenides taught, as Burnet puts it (Early Greek Philosophy 2 , 208) that * what is . . . is finite, spherical, motionless, corporeal ', i.e. that the world is a full globe, a whole without any parts, and that ' there is nothing beyond it '. I am quoting Burnet because (a) his description is excellent and (b) it destroys his own interpretation (E.G.P., 208-1 l) of what Parmenides calls the ' Opinion of the Mortals ' (or the Way of Delusive Opinion). For Burnet dismisses there all the interpretations of Aristotle, Theophrastus, Simplicius, Gomperz, and Meyer, as c anachronisms ' or ' palpable
anachronisms ', etc.
Now the interpretation dismissed by Burnet is
practically the same as the one
proffered here in the text; namely, that Parmenides
believed in a world of
reality behind this world of appearance. Such a
dualism, which would allow
Parmenides' description of the world of appearance to
claim at least some
kind of adequacy, is dismissed by Burnet as hopelessly
anachronistic. I

suggest, however, that if Parmenides had believed
solely in his unmoving world,
and not at all in the changing world, then he would
have been really mad
(as Empedocles hints). But in fact there is an
indication of a similar dualism
already in Xenophanes, fragm. 23-6, if confronted with
fragm. 34 (csp.
' But all may have their fancy opinions '), so that we
can hardly speak of
an anachronism. As indicated in note 15 (6-7), I
follow Gornford's interpreta-
tion of Parmenides. (See also note 41 to chapter 10.)

23 Cp. Aristotle's Metaphysics, 1078b5 the next
quotation is : op. cit.,

24 This valuable comparison is due to G. G. Field,
Plato and His Contem-
poraries , 211.

25 The preceding quotation is from Aristotle,
Metaphysics, 1078^5 ; the
next from op. cit., g87b7.

28 In Aristotle's analysis (in Metaphysics, g87a30-bi8)
of the arguments
which led to the theory of Ideas (cp. also note 56 (6)
to chapter 10), we can
distinguish the following steps : (a) Heraclitus' flux,
(b) the impossibility of
true knowledge of things in flux, (c) the influence of Socrates' ethical essences,

(d) the Ideas as objects of true knowledge, (e) the influence of the Pythagoreans,
(/) the * mathematical ' as intermediate objects. ((e) and (/) I have not
mentioned in the text, where I have mentioned instead (g) the Parmenidean
influence.)

It may be worth while to show how these steps can be
identified in Plato's
own work, where he expounds his theory ; especially in
the Phaedo and in the
Republic, in the Theactetus and in the Sophist, and in
the Timaeus.

(i) In the Phaedo, we find indications of all the
points up to and including
(e). In 65a-66a, the steps (d) and (c) are prominent,
with an allusion to (b).
In 706 step (a), Heraclitus' theory appears, combined
with an element of
Pythagoreanism (e). This leads to 743 ff., and to a
statement of step (d).
99-100 is an approach to (d) through (c), etc. For (a)
to (d), cp. also the
Cratylus, 43gc ff.

In the Republic, it is of course especially Book VI
that corresponds closely
to Aristotle's report, (a) In the beginning of Book VI,
485a/b the Heraclitean
flux is referred to (and contrasted with the unchanging
world of Forms).
Plato there speaks of ' a reality which exists for ever
and does not drift from
generation to degeneration. 9 (Gp. note 2 (2) to
chapter 4 and note 33 to chapter 8,
and text.) The steps (b), (d) and especially (/) play a
rather obvious role in
the famous Simile of the Line (Rep., 509^5 ne ; cp.
Adam's notes, and his
appendix I to Book VII) ; Socrates' ethical influence,
i.e. step (c), is of course
alluded to throughout the Republic. It plays an
important rôle within the
Simile of the Line and especially immediately before,
i.e. in 508b ff., where the role of the good is emphasized; see in particular 508b/c: 'This is what I maintain regarding the offspring of the good. What the good has begotten in its own likeness is, in the intelligible world, related to reason (and its objects) in the same way as, in the visible world ', that which is the offspring of the sun, ' is related to sight (and its objects). ' Step (e) is implied in (/), but more fully developed in Book VII, in the famous Curriculum (cp. esp. 523a-527c), which is largely based on the Simile of the Line in Book VI.

(2) In the Theaetetus, (a) and (b) are treated extensively; (c) is mentioned in 174b and 175c. In the Sophist, all the steps, including (g), are mentioned, only (e) and (/) being left out; see especially 274a (step c); 249c (step b); 253d /e (step d).

(3) In the Timaeus, all the steps mentioned by Aristotle are indicated, with the possible exception of (c), which is alluded to only indirectly in the introductory recapitulation of the contents of the Republic, and in 2gd. Step (e) is, as it were, alluded to throughout, since 'Timaeus' is a 'western' philosopher and strongly influenced by Pythagoreanism. The other steps occur twice in a form almost completely parallel to Aristotle's account; first briefly in 28a-2gd, and later, with more elaboration, in 486-550. Immediately after (a), i.e. a Heraclitean description (4ga If.; cp. Cornford, Plato's Cosmology, 178) of the world in flux, the argument (b) is raised (51c-c) that if we are right in distinguishing between reason (or true knowledge)
and mere opinion, we
must admit the existence of the unchangeable Forms;
these are (in 516 f.)
introduced next in accordance with step (d). The
Heraclitean flux then
comes again (as labouring space), but this time it is
explained, as a consequence
of the act of generation. And as a next step (/)
appears, in 53C.

(4) It seems that this parallelism between the Timaeus
and Aristotle's
report has not been sufficiently emphasized so far; at
least, it is not used by
G. C. IJield in his excellent and convincing analysis
of Aristotle's report
(Plato and His Contemporaries, 202 ff.). But it would
have strengthened Field's
arguments (arguments, however, which hardly need
strengthening, since they
are practically conclusive) against Burnet's and
Taylor's views that the Theory
of Ideas is Socratic (cp. note 56 to chapter 10). For
in the Timaeus, Plato does
not put this theory into the mouth of Socrates, a fact
which according to
Burnet's and Taylor's principles should prove that it
was not Socrates' theory.
(They avoid this inference by claiming that * Timaeus *
is a Pythagorean, and
that he develops not Plato's philosophy but his own.
But Aristotle knew
Plato personally for twenty years and should have been
able to judge these
matters; and he wrote his Metaphysics at a time when
members of the Academy
could have contradicted his presentation of Platonism.)

(5) Burnet writes, in Greek Philosophy, I, 155 (cp.
also p. xliiv of his edition
of the Phaedo, 1911) :' the theory of forms in the
sense in which it is maintained
in the Phaedo and Republic is wholly absent from what
we may fairly regard the
most distinctively Platonic of the dialogues, those,
namely, in which Socrates
is no longer the chief speaker. In that sense it is
never even mentioned in
any dialogue later than the Parmenides . . . with the
single exception of the
Timaeus (sic), where the speaker is a Pythagorean.' But
if it is maintained in
the Timaeus in the sense in which it is maintained in
the Republic, then it is
certainly so maintained in the Sophist 253d/e; and in
the Politicus, 26gc/d;
286a; 2g7b/c, and c/d; 301 a and e; 3026; and 303b;
and in the Laws,
yi3b, 73gd/e, g62c, and, most important, g65b/c; see
also the next note.
(Burnet believes in the genuineness of the Letters,
especially the Seventh; but
the theory of Ideas is maintained there in 342a ft.;
see also note 56 (5, d) to
chapter 10.)

27 Cp. Laws, 8g5d-e. I do not agree with England's note
(in his edition
of the Laws, vol. II, 472) that 'the word "essence"
will not help us'. True,
if we meant by 'essence' some important sensible part
of the sensible thing
(which might perhaps be purified and produced by some
distillation), then
'essence' would be misleading. But the word *
essential' is widely used in
a way which corresponds very well indeed with what we
wish to express here:
something opposed to the accidental or unimportant or
changing empirical
aspect of the thing, whether it is conceived as
dwelling in that thing, or in a
metaphysical world of Ideas.

I am using the term 'essentialism' in opposition to *
nominalism', in order
to avoid, and to replace, the misleading traditional
term *realism', wherever
it is opposed (not to *idealism but) to 'nominalism'. (See also note 26 ff.
to chapter n, and text, and especially note 38.)

On Plato's application of his essentialist method, for
instance, as mentioned
in the text, to the theory of the soul, see Laws, 8gse
f., quoted in note 15 (8)
to this chapter, and chapter 5, especially note 23. See
also, for instance,
Meno, 86d/e, and Symposium, iggc/d.

28 On the theory of causal explanation, cp. my Logik der Forschung, csp. chapter 12, pp. 26 ff.

1 90 CHAPTER 4/NOTES 1-2

29 The theory of language here indicated is that of Semantics, as developed especially by A. Tarski and R. Carnap. Gp. Carnap, Introduction to Semantics, 1942, and note 23 to chapter 8.

30 The theory that while the physical sciences are based on a methodological nominalism, the social sciences must adopt essentialist (' realist ') methods, has been made clear to me by K. Polanyi (in 1925); he pointed out, at that time, that a reform of the methodology of the social sciences might conceivably be achieved by abandoning this theory. The theory is held, to some extent, by most sociologists, esp. by J. S. Mill (for instance, Logic, VI, ch. VI, 2; see also his historicist formulations, e.g. in VI, ch. X, 2, last paragraph: 'The fundamental problem . . of the social science is to find the laws according to which any state of society produces the state which succeeds it . .'), K. Marx (see below); M. Weber (cp., for example, his definitions in the beginning of Methodische Grundlagen der Soziologie, in Wirtschaft und Gesellschaft, I, and in Ges. Aufsätze zur Wissenschaftslehre). G. Simmel, A. Vierkandt, R. M. Maclver, and many more. The philosophical expression of all these tendencies is E. Husserl's 'Phaenomenology', a systematic revival of the methodological essentialism of Plato and Aristotle. (See also chapter n, esp. note 44.)

The opposite, the nominalist attitude in sociology, can be developed, I
think, only as a technological theory of social institutions.

In this context, I may mention how I came to trace historicism back to Plato and Heraclitus. In analysing historicism, I found that it needs what I call now methodological essentialism; i.e. I saw that the typical arguments in favour of essentialism are bound up with historicism (cp. my Poverty of Historicism). This led me to consider the* history of essentialism. I was struck by the parallelism between Aristotle's report and the analysis which I had carried out originally without any reference to Platonism. In this way, I was reminded of the roles of both Heraclitus and Plato in this development.

31 I am alluding mainly to R. H. S. Grossman, Plato Today (1937), the first book I have found to contain a political interpretation of Plato which is partly similar to my own. See also notes 2-3 to chapter 6, and text.

NOTES TO CHAPTER 4

1 Cp. Republic, 608e. See also note 2 (2) to this chapter.

2 (i) With the Platonic theory, Aristotle contrasts his own, according to which the 'good' thing is not the starting point, but rather the end or aim of change, since 'good' means a thing aimed at the final cause of change. Thus he says of the Platonists, i.e. of* those who believe in Forms', that they 'do not speak as if anything came to pass for the sake of these * (i.e. of things which are

* good ') * but as if all movement started from them '. And he points out that

* good ' means therefore to the Platonists not ' a cause qua good ', i.e. an aim, but that * it is only incidentally a good '. Cp.
Metaphysics, gSSbi and 8 ff.
(This criticism sounds as if Aristotle had sometimes held views similar to those of Speusippus, which is indeed Zeller's opinion; see note n to chapter 11.

(2) Concerning the movement towards corruption, mentioned in the text in this paragraph, and its general significance in the Platonic philosophy, we must keep in mind the general opposition between the world of unchanging things or Ideas, and the world of sensible things in flux. Plato often expresses this opposition as one between the world of unchanging things and the world of corruptible things, or between things that are generated and those that degenerate, etc.; see, for instance, Republic, 485a/b, quoted in note 26 (i) to chapter 3 and in text to note 33 to chapter 8; and Republic, 5463, quoted in text to note 37 to chapter 5: "* All things that have been generated must degenerate" (or decay). That this problem of the generation and corruption of the world of things in flux was an important part of the Platonic School tradition is indicated.

CHAPTER 4/NOTES 3–7 IQI

by the fact that Aristotle devoted a separate treatise to this problem. Another interesting indication is the way in which Aristotle talked about these matters in the introduction to his Politics, contained in the concluding sentences of the Nicomachian Ethics (i i8ib/i5): "* We shall try to ... find what it is that preserves or corrupts the cities . . ." This passage is significant not only as a general formulation of what Aristotle considered the main problem of his Politics, but also because of its striking similarity with an important passage in the Laws, viz. GyGa, and 676b/c quoted below in text to notes 6 and 25 to
this chapter. (See also notes i, 3, and 24/25 to this chapter; see note 32 to chapter 8, and the passage from the Laws quoted in note 59 to chapter 8.)

8 This quotation is from the Statesman, sGgc/d. (See also note 23 to this chapter.) For the theory that perfect things (divine 'natures'; cp. the next chapter) can only become less perfect when they change, see esp. Republic, 38ia-c. The quotation from Aristotle is from the Metaphysics, g88b3. The last two quotations in this paragraph are from Plato's Laws, 79 7d, f. See also note 24 to this chapter, and text. (It is possible to interpret the remark about the evil objects as another allusion to a cyclic development, as discussed in note 6 to chapter 2, i.e. as an allusion to the belief that the trend of the development must reverse, and that things must begin to improve once the world has reached the lowest depth of evilness.

4 Cp. Timaeus, Qid-gab/c. See also note 6 (7) to chapter 3 and note n to chapter 11.

6 See the beginning of chapter 2 above, and note 6 (i) to chapter 3. It is not a mere accident that Plato mentions Hesiod's story of 'metals' when discussing his own theory of historical decay (Rep., 546e/547a, esp. notes 39 and 40 to chapter 5); he clearly wishes to indicate how well his theory fits in with, and explains, that of Hesiod.

6 The historical part of the Laws is in Books Three and Four; the two quotations in the text are from the beginning of this part, i.e. Laws, 676a. For the parallel passages mentioned, see Republic, 36gb, f. ('The birth of a city . . .') and 545d ('How will our city be changed . .').
It is often said that the Laws (and the Statesman) are less hostile towards democracy than the Republic, and it must be admitted that Plato's general tone is in fact less hostile (this is perhaps due to the increasing inner strength of democracy; see chapter 10 and the beginning of chapter 11). But the only practical concession made to democracy in the Laws is that political officers are to be elected by the members of the ruling class. But since all important changes in the laws of the state are forbidden anyway (cp., for instance, the quotations in the text to note 3 of this chapter), this does not mean very much. The fundamental tendency remains pro-Spartan, and this tendency was, as can be seen from Aristotle's Politics, u, 6, 17 (1265∧, compatible with a so-called * mixed * constitution. In fact, Plato in the Laws is, if anything, more hostile towards the spirit of democracy, i.e. towards the idea of the freedom of the individual, than he is in the Republic; cp. especially the text to notes 32 and 33 to chapter 6 (i.e. Laws, 739C, ff., and 942a, f.) and to notes 19-22 to chapter 8 (i.e. Laws, gc∧c-goga). See also next note.

7 It seems likely that it was largely this difficulty of explaining the first change (or the Fall of Man) that led Plato to transform his theory of Ideas, as mentioned in note 15 (8) to chapter 3; viz., to transform the Ideas into active powers, and thus into something like gods, or even into gods, as opposed to the Republic which (cp. 38od) petrifies even the gods into unmoving and unmoved Parmenidean beings. (An important turning point is, apparently, the Sophist, 2480-249∧. The transformation seems to solve at the same time the difficulty of the so-called * third man *; for if the Forms are, as in the Timaeus, fathers, then there is no 'third man' necessary to explain their similarity to their offspring.)
Regarding the relation of the Republic to the Statesman and to the Laws, I think that Plato's attempt in the two latter dialogues to trace the origin of human society further and further back, is likewise connected with the difficulties inherent in the problem of the first change. That it is difficult to conceive of a change overtaking a perfect city is clearly stated in Republic, 5463; Plato's attempt in the Republic to solve it, will be discussed in the next chapter (cp. text to notes 37-40 to chapter 5). In the Statesman, Plato adopts the theory of a cosmic catastrophe which leads to the change from the (Empedoclean) half-circle of love to the present period, the half-circle of strife. This idea seems to have been dropped in the Timaeus, in order to be replaced by a theory (retained in the Laws) of more limited catastrophes, such as floods, which may destroy civilizations, but apparently do not affect the course of the universe. (It is possible that this solution of the problem was suggested to Plato by the fact that in 373-372 B.C., the ancient city of Helice was destroyed by earthquake and flood.) The earliest form of society, removed in the Republic only by one single step from the still existing Spartan state is thrust back to a more and more distant past. Although Plato continues to believe that the first settlement must be the best city, he now discusses societies prior to the first settlement, i.e. nomad societies, 'hill shepherds'. (Cp. esp. note 33 to this chapter.)

9 The quotation is from Adam's comments on book VIII of the Republic; see his edition, vol. II, 198, note to 544a3.

10 Cp. Republic, 5440.

11 (i) As opposed to my contention that Plato, like many modern sociologists since Comte, tries to outline the typical stages of social development, most critics take Plato's story merely as a somewhat dramatic presentation of a purely logical classification of constitutions. But this not only contradicts what Plato says (cp. Adam's note to Rep., 54409, op. cit., vol. II, 199) but it is also against the whole spirit of Plato's logic, according to which the essence of a thing is to be understood by its nature, i.e. by its historical origin. And we must not forget that he uses the same word, 'genus', to mean a class in the logical sense and a race in the biological sense. The logical *genus* is still identical with the 'race', in the sense of 'offspring of the same parent'. (With this, cp. notes 15 to 20 to chapter 3, and text, as well as notes 23-24 to chapter 5, and text, where the equation nature ~ origin = race is discussed.) Accordingly, there is every reason for taking what Plato says at its face value; for even if Adam were right when he says (loc. cit.) that Plato intends to give a *logical order*, this order would for him be at the same time that of a typical historical development. Adam's remark (loc. cit.) that the order 'is primarily determined by psychological and not by historical considerations ' turns, I believe, against him. For he himself points out (for instance, op. cit., vol. II, 195, note to 5433, ff.) that Plato 'retains throughout .. the analogy between the Soul and the City'. According to Plato's political theory of the soul (which will be discussed in the next chapter), the psychological history must run parallel to the social
history, and the alleged opposition between psychological and historical considerations disappears, turning into another argument in favour of our interpretation.

(2) Exactly the same reply could be made if somebody should argue that Plato's order of the constitution is, fundamentally, not a logical but an ethical one; for the ethical order (and the aesthetic order as well) is, in Plato's philosophy, indistinguishable from the historical order. In this connection, it may be remarked that this historicist view provides Plato with a theoretical background for Socrates' eudemonism, i.e. of the theory that goodness and happiness are identical. This theory is developed, in the Republic (cp. especially

CHAPTER 4/NOTES 1 2- 1 8 193

58ob), in the form of the doctrine that goodness and happiness, or badness and unhappiness, are proportional; and so they must be, if the degree of the goodness as well as of the happiness of a man is to be measured by the degree in which he resembles the perfect Idea of man. (The fact that Plato's theory leads, in this point, to a theoretical justification of an apparently paradoxical Socratic doctrine may well have helped Plato to convince himself that he was only expounding the true Socratic creed; see text to notes 56/57 to chapter 10.

(3) Rousseau took over Plato's classification of institutions (Social Contract, Book II, ch. VII, Book III, ch. Ill ff., cp. also ch. X). But he was probably mainly indirectly influenced by Plato when he revived the Platonic Idea of a primitive society (cp., however, notes i to chapter 6 and 14 to chapter 9);
but a direct product of the Platonic Renaissance in Italy was Sanazzaro's
most influential book Arcadia, with its revival of Plato's idea of a blessed
primitive society of Greek (Porian) hill shepherds. (For this idea of Plato's,
(For this idea of Plato's, cp. text to note 32 to this chapter.) Thus Romanticism
(cp. also chapter 9)
is historically indeed an offspring of Platonism.

(4) How far the modern historicism of Comte and Mill,
and of Hegel and
Marx, is influenced by the theistic historicism of
Giambattista Vico's New
Science (1725) is very hard to say: Vico himself was
undoubtedly influenced
by Plato, as well as by St. Augustine's De Civitate Dei
and Machiavelli's Dis-
courses on Livy. Like Plato (cp. ch. 5), Vico
identified the * nature ' of a
thing with its ' origin ' (cp., Opere, Ferrari's second
ed., 1852-4, vol. V, p. 99); and he believed that all nations must pass through the
same course of develop-
ment, according to one universal law. His * nations ' (like Hegel's) may thus
be said to be one of the links between Plato's ' Cities ' and Toynbee's
' Civilizations '.

12 Cp. Republic, 549c/d; the next quotations are op.
cit., 550d-e, and later,
op. cit., 551a/b.

13 Cp. op. cit., 5566. (This passage should be compared
with Thucydides,
III, 82-4, quoted in chapter 10, text to note 12.) The
next quotation is
op. cit., 5573.

14 For Pericles' democratic programme, see text to note
31, chapter 10;
note 17 to chapter 6, and note 34 to chapter 10.

II, 240, note to 55^22.
(The italics in the second quotation are mine.) Adam
admits that * the picture
is doubtless somewhat exaggerated'; but he leaves
little doubt that he thinks it is, fundamentally, true 'for all time'.

18 Adam, loc. cit.

17 This quotation is from Republic, 560d (for this and the next quotation, cp. Lindsay's translation); the next two quotations are from the same work, 563 a-b, and d. (See also Adam's note to 563d25.) It is significant that Plato, who in general is not a defender of private property, defends this institution, when the property bought is a slave, by appealing to the lawful right of the buyer.

Another attack upon democracy is that *it tramples under foot* the educational principle that *no one can grow up to be a good man unless his earliest years were given to noble games*. (Rep., 558b; see Lindsay's translation; cp. note 68 to chapter 10.) See also the attacks upon equalitarianism quoted in note 14 to chapter 6.

18 Slavery (see *the last note*) and the Athenian movement against it will be further discussed in chapters 5 (notes 13 and text), 10, and n; see also note 29 to the present chapter. Like Plato, Aristotle (e.g. in Pol., 1313^1, 1319b20; and in his Constitution of Athens, 59, 5), testifies to Athens' liberality towards slaves; and so does the Pseudo-Xenophon (cp. his Const, of Athens* I, 10, f.)

CHAPTER 4/NOTES 19-26

19 Gp. Republic, 577a, f.; see Adam's notes to 577a5 and bi2 (op. cit., vol. II, 332 f.).

20 Republic, 5666; cp. note 63 to chapter 10.
21 Cp. Statesman (Politicus), 30ic/d. Although Plato distinguishes six types of debased states, he does not introduce any new terms; the names *monarchy* (or 'kingship') and 'aristocracy' are used in the Republic (445d) of the best state itself, and not of the relatively best forms of debased states, as in the Statesman.

22 Gp. Republic, 544d.

23 Gp. Statesman, 297c/d : c If the government I have mentioned is the only true original, then the others ' (which are 'only copies of this ' ; cp. 2g7b/c) ' must use its laws, and write them down; this is the only way in which they can be preserved '. (Gp. note 3 to this chapter, and note 18 to chapter 7.) ' And any violation of the laws should be punished with death, and the most severe punishments; and this is very just and good, although, of course, only the second best thing.' (For the origin of the laws, cp. note 32 (i, a) to this chapter, and note 17 (2) to chapter 3.) And in 3006/3013, f., we read:

* The nearest approach of these lower forms of government to the true government . . is to follow these written laws and customs. . . When the rich rule and imitate the true Form, then the government is called aristocracy; and when they do not heed the (ancient) laws, oligarchy,' etc. It is important to note that not lawfulness or lawlessness in the abstract, but the preservation of the ancient institutions of the original or perfect state is the criterion of the classification. (This is in contrast to Aristotle's Politics, I2g2a, where the main distinction is whether or not 'the law is supreme', or, for instance, the mob.)

24 The passage, Laws, 7096-7143, contains several allusions to the Statesman; for instance, 710 d-e, which introduces,
following Herodotus III, 80-82, the number of rulers as the principle of classification; the enumerations of the forms of government in 7126 and d; and 7i3b, flf., i.e. the myth of the perfect state in the day of Cronos, 'of which the best of our present states are imitations'. In view of these allusions, I little doubt that Plato intended his theory of the fitness of tyranny for Utopian experiments to be understood as a kind of continuation of the story of the Statesman (and thus also of the Republic). The quotations in this paragraph are from the Laws, 7096, and 7ioc/d; the 'remark from the Laws quoted above' is 797d, quoted in the text to note 3, in this chapter. (I agree with E. B. England's note to this passage, in his edition of The Laws of Plato, 1921, vol. II, 258, that it is Plato's principle that 'change is detrimental to the power...of anything', and therefore also to the power of evil; but I do not agree with him * that change from bad', viz., to good, is too self-evident to be mentioned as an exception; it is not self-evident from the point of view of Plato's doctrine of the evil nature of change. See also next note).

26 Cp. Laws, 676b/c (cp. 6763, quoted in the text to note 6). In spite of Plato's doctrine that 'change is detrimental' (cp. the end of the last note), E. B. England interprets these passages on change and revolution by giving them an optimistic or progressive meaning. He suggests that the object of Plato's search is what 'we might call "the secret of political vitality".' (Gp. op. cit., vol. I, 344.) And he interprets this passage on the search for the true cause of (detrimental) change as dealing with a search for 'the cause and nature of the true development of a state, i.e. of its progress towards perfection'. (Italics his; cp. vol. I, 345.) This shows how much the tendency to idealize...
Plato and to represent him as a progressivist blinds even such an excellent critic against his own finding, namely, that Plato believed change to be detrimental.

86 Gp. Republic, 545d (see also the parallel passage 465^). The next

CHAPTER 4/NOTE 2? 195

quotation is from the Laws, 6836. (Adam in his edition of the Republic, vol. II, 203, note to 545dai, refers to this passage in the Laws.) England, in his edition of the Laws, vol. I, 360 f., note to 68365, mentions Republic, 60ga, but neither 54 5d nor 4650, and supposes that the reference is ' to a previous discussion, or one recorded in a lost dialogue '. I do not see why Plato should not be alluding to the Republic, by using the fiction that some of its topics have been discussed by the present interlocutors. As Gornford says, in Plato's last group of dialogues there is ' no motive to keep up the illusion that the conversations had really taken place ' ; and he is also right when he says that Plato * was not the slave of his own fictions '. (Cp. Cornford, Plato's Cosmology, pp. 5 and 4.) Plato's law of revolutions was rediscovered, without reference to Plato, by V. Pareto ; cp. his Treatise on General Sociology, 2054, 2057, 2058. (At the end of 2055, there is also a theory of arresting history.) Rousseau also rediscovered the laws. (Social Contract, Book III, ch. X.)

27 (i) It may be worth noting that the intentionally non-historical features of the best state, especially the rule of the philosophers, are not mentioned by Plato in the summary at the beginning of the Timaeus, and that in Book
VIII of the Republic he assumes that the rulers of the best state are not versed in Pythagorean number-mysticism; cp. Republic, 546c/d, where the rulers are said to be ignorant of these matters. (Cp. also the remark, Rep., 543d/544a, according to which the best state of Book VIII can still be surpassed, namely, as Adam says, by the city of Books V-VII the ideal city in heaven.)

In his book, Plato's Cosmology, pp. 6 ff., Cornford reconstructs the outlines and contents of Plato's unfinished trilogy, Timaeus Critias Hermocrates, and shows how they are related to the historical parts of the Laws (Book III). This reconstruction is, I think, a valuable corroboration of my theory that Plato's view of the world was fundamentally historical, and that his interest in *how it generated* (and how it decays) is linked with his theory of Ideas, and indeed based on it. But if that is so, then there is no reason why we should assume that the later books of the Republic 'started from the question how it' (i.e. the city) *might be realized in the future and sketched its possible decline through lower forms of polities' (Cornford, op. cit., 6; italics mine); but we should, especially in view of the close parallelism between the third book of the Laws and the eighth book of the Republic, consider it as a simplified historical sketch of the actual decline of the ideal city of the past, and as an explanation of the origin of the existing states, analogous to the greater task set by Plato for himself in the Timaeus, in the unfinished trilogy, and in the Laws.

(sj) In connection with my remark, later in the paragraph, that Plato *certainly knew that he did not possess the necessary data', see for instance Laws, 683d, and England's note to 683d2.
(3) To my remark further on in the paragraph, that Plato recognized the Cretan and Spartan societies as petrified or arrested (and to the remark in the next paragraph that Plato's best state is not only a class state but a caste state) the following may be added. (Cp. also note 20 to this chapter, and 24 to chapter 10.)

In Laws, 79 yd (in the introduction to the 'important pronouncement', as England calls it, quoted in the text to note 3 to this chapter) Plato makes it perfectly clear that his Cretan and Spartan interlocutors are aware of the *arrested* character of their social institutions; Clenias, the Cretan interlocutor, emphasizes that he is anxious to listen to any defence of the archaic character of a state. A little later (799a), and in the same context, a direct reference is made to the Egyptian method of arresting the development of institutions; surely a clear indication that Plato recognized a tendency in Crete and Sparta parallel to that of Egypt, namely, to arrest all social change.

196 CHAPTER 4/NOTES 28-3!

In this context, a passage in the Timaeus (see especially 24a-b) seems important. In this passage, Plato tries to show (a) that a class division very similar to that of the Republic was established in Athens at a very ancient period of its pre-historical development, and (b) that these institutions were closely akin to the caste system of Egypt (whose arrested caste institutions he assumes to have derived from his ancient Athenian state). Thus Plato himself acknowledges by implication that the ideal ancient and perfect state
of the Republic is a caste state. It is interesting that Grantor, first commentator on the Timaeus, reports, only two generations after Plato, that Plato had been accused of deserting the Athenian tradition, and of becoming a disciple of the Egyptians. (Cp. Gomperz, Greek Thinkers, Germ, ed., II, 476.) See also Isocrates* Busiris, quoted in note 3 to chapter 13.

For the problem of the castes in the Republic, see furthermore notes 3 1 and 32 (i, d) to this chapter, note 40 to chapter 6, and notes 1 1-14 to chapter 8.

A. E. Taylor, Plato : The Man and His Work, pp. 269 f., forcefully denounces the view that Plato favoured a caste state.

28 Cp. Republic, 416a. The problem is considered more fully in this chapter, text to note 35. (For the problem of caste, mentioned in the next paragraph, see notes 27 (3) and 31 to this chapter.)

29 Cp. Republic, 371d/e. Adam comments (op. cit., vol. I, 97, note to 371032) : 'Plato does not admit slave labour in his city, unless perhaps in the persons of barbarians.' I agree that Plato in the Republic ^Ggb-c) opposed the enslavement of Greek prisoners of war; but he encouraged that of barbarians. (This is also the opinion of Tarn; cp. note 1 3 (2) to chapter 15.) And Plato violently attacked the Athenian movement against slavery, and insisted on the legal rights of property when the property was a slave (cp. text to notes 17 and 18 to this chapter). And as is shown by the next quotation (from Rep., 5480 /549a) in the paragraph to which this note is appended, he did not abolish slavery in his best city. (See also Rep., 590c/d, where he defends the demand that the workers should be the slaves of the best man.) A. E. Taylor is therefore wrong when he maintains twice (in his Plato, 1908 and 1914, pp. 197 and 118) that Plato
implies * that there is no class of slaves in the community '. For similar views in Taylor's Plato : The Man and His Work (1926), cp. end of note 27 to this chapter.

For Plato's treatment of slavery in the Laws, see especially G. &. Morrow, ' Plato and 'Greek Slavery' (Mind, N.S., vol. 48, 186-201 ; see also p. 402), an article which gives an excellent and critical survey of the subject, and reaches a very just conclusion, although the author is, in my opinion, still a little biased in favour of Plato. (The article does not perhaps sufficiently stress the fact that in Plato's day, an anti-slavery movement was well on the way ; cp. note 13 to chapter 5.) See also the Statesman, 3093.

For Plato's advice against legislating for the common people with their ' vulgar market quarrels ', etc., see Republic, 425c/d-427a ; esp. 425d-e and 42 7a. These passages, of course, attack Athenian democracy (and all ' piecemeal ' legislation in the sense of chapter 9).

30 The quotation is from Plato's summary of the Republic in the Timaeus (i8c/d). With the remark concerning the lack of novelty of the suggested community of women and children, compare Adam's edition of The Republic of Plato, vol. I, p. 292 (note to 457b, ff.) and p. 308 (note to 463^), as well as pp. 345-55, esp. 354 ; with the Pythagorean element in Plato's communism, cp. op. cit., p. 199, note to 4i6d22. (For the precious metals, cp. note 24 to chapter 10.)

81 The passage quoted is from Republic, 434b/c. In demanding a caste state, Plato hesitates for a long time. This is quite apart from the ' lengthy preface ' to the passage in question (which will be discussed in chapter 6 ;
chapter 4/note 32 197

matters, in 4153, fT., he speaks as though a rise from the lower to the upper classes were permissible, provided that in the lower classes * children were born with an admixture of gold and silver ' (415c), i.e. of upper class blood and virtue. But in 434b /c, and, even more clearly, in 547 a, this permission is withdrawn; and in 547a any admixture of the metals is declared an impurity which must be fatal to the state. See also text to notes 11-14 to chapter 8 (and note 27 (3) to the present chapter).

32 Gp. the Statesman, 2716. The passages in the Laws about the primitive nomadic shepherds and their patriarchs are 6776-6806. The passage quoted is Laws, 680e. The passage quoted next is from the Myth of the Earthborn, Republic ', 415d/e. The concluding quotation of the paragraph is from Republic, 440d. It may be necessary to add some comments on certain remarks in the paragraph to which this note is appended.

(i) It is stated in the text that it is not very clearly explained how the * settlement ' came about. Both in the Laws and in the Republic we first hear (see (a) and (c), below) of a kind of agreement or social contract (for the social contract, cp. note 29 to chapter 5 and notes 43 to 54 to chapter 6, and text), and later (see (b) and (c), below) of a forceful subjugation.

(a) In the Laws, the various tribes of hill shepherds settle in the plains after having joined together to form larger war bands whose laws are arrived at by an agreement or contract, made by arbiters vested
with royal powers
(68 l b and c/d; for the origin of the laws described in 68 ib, cp. note 17 (2)
to chapter 3). But now Plato becomes evasive. Instead of describing how
these bands settle in Greece, and how the Greek cities were founded, Plato
switches over to Homer's story of the foundation of Troy, and to the Trojan
war. From there, Plato says, the Achaeans returned under the name of
Dorians, and 'the rest of the story... is part of Lacedaemonian history'
(682e) 'for we have reached the settlement of Lacedaemon' (682e/683a).
So far we have heard nothing about the manner of this settlement, and there
follows at once a further digression (Plato himself speaks about the * roundabout
track of the argument') until we get ultimately (in 683c/d) the *hint'
mentioned in the text; see (b).

(b) The statement in the text that we get a hint that the Dorian *settle-
ment* in the Peloponnese was in fact a violent subjugation, refers to the Laws
(683c/d), where Plato introduces what are actually his first historical remarks
on Sparta. He says that he begins at the time when the whole of the Pelopon-
nese was *practically subjugated* by the Dorians. In the Menexenus (whose
genuineness can hardly be doubted; cp. note 35 to chapter 10) there is in
245C an allusion to the fact that the Peloponnesians were *immigrants from
abroad* (as Grote puts it: cp. his Plato, III, p. 5).

(c) In the Republic (369^ the city is founded by workers with a view to
the advantages of a division of labour and of co-
operation, in accordance with
the contract theory.

(d) But later (in Rep., 4i5d/e; see the quotation in the text, to this
paragraph) we get a description of the triumphant
invasion of a warrior class
of somewhat mysterious origin the 'earthborn'. The decisive passage of this description states that the earthborn must look round to find for their camp the most suitable spot (literally) 'for keeping down those within', i.e., for keeping down those already living in the city, i.e., for keeping down the inhabitants.

(e) In the Statesman (2713, f.) these 'earthborn' are identified with the very early nomad hill shepherds of the pre-settlement period.

(/) To sum up it seems that Plato had a fairly clear idea of the Dorian conquest, which he preferred, for obvious reasons, to veil in mystery. It also seems that there was a tradition that the conquering war hordes were of nomad descent.

198 CHAPTER 4/NOTE 33

(2) With the remark later in the text in this paragraph regarding Plato's 'continuous emphasis' on the fact that ruling is shepherding, cp., for instance, the following passages: Republic, 3430, where the idea is introduced; 345C f., where, in form of the simile of the good shepherd, it becomes one of the central topics of the investigation; 375a-376b, 4043, 44od, 4510-6, 45ga-46oc, and 466c-d (quoted in note 30 to chapter 5), where the auxiliaries are likened to sheep-dogs and where their breeding and education is discussed accordingly; 416a, ff., where the problem of the wolves without and within the state is introduced; cp. furthermore, the Statesman, where the idea is continued over many pages, esp. 26id-276d. With regard to the Laws, I may refer to the passage (6946), where Plato says of Cyrus that he had acquired for his sons
' cattle and sheep and many herds of men and other animals '. (Cp. also Laws, 735, and Theaet., i74d.)

(3) With all this, cp. also A. J. Toynbee, A Study of History, esp. vol. Ill, pp. 32 (n. i), where A. H. Lybyer, The Government of the Ottoman Empire, etc., is quoted, 33 (n. 2), 50-100; see more especially his remark on the conquering nomads (p. 22) who * deal with ... men ', and on Plato's human watch-dogs' (p. 94, n. 2). I have been much stimulated by Toynbee's brilliant ideas and much encouraged by many of his remarks which I take as corroborating my interpretations, and which I can value the more highly the more Toynbee's and my fundamental assumptions seem to disagree. I also owe to Toynbee a number of terms used in my text, especially ' human cattle ', * human herd ' and ' human watch-dog '.

Toynbee's Study of History is, from my point of view, a model of what I call historicism; I need not say much more to express my fundamental disagreement with it; and a number of special points of disagreement will be discussed at various places (cp. notes 43 and 45 (2) to this chapter, notes 7 and 8 to chapter 10, and chapter 24). But it contains a wealth of interesting and stimulating ideas. Regarding Plato, Toynbee emphasizes a number of points in which I can follow him, especially that Plato's best state is inspired by his experience of social revolution and by his wish to arrest all change, and that it is a kind of arrested Sparta (which itself was also arrested). Toynbee also stresses the ideas of the shepherd of men, of the human sheep-dog, and the human cattle. In spite of these points of agreement, there is even in the interpretation of Plato a fundamental disagreement between Toynbee's views and my own. Toynbee regards Plato's best state as
a typical (reactionary) Utopia, while I interpret its major part, in connection with what I consider as Plato's general theory of change, as an attempt to reconstruct a primitive form of society. Nor do I think that Toynbee would agree with my interpretation of Plato's story of the period prior to the settlement, and of the settlement itself, outlined in this note and the text; for Toynbee says (op. cit., vol. Ill, 80) that 'the Spartan society was not of nomadic origin'. Toynbee strongly emphasize^ (op. cit., Ill, 50 ff.) the peculiar character of Spartan society, which, he says, was arrested in its development owing to a superhuman effort to keep down their * human cattle * . But I think that this emphasis on the peculiar situation of Sparta makes it difficult to understand the similarities between the institutions of Sparta and Crete which Plato found so striking (Rep., 544C ; Laws, 683a). These, I believe, can be explained only as arrested forms of very ancient tribal institutions, which must be considerably older than the effort of the Spartans in the second Messenian war (about 650-620 B.C. ; cp. Toynbee, op. cit., Ill, 53). Since the conditions of the survival of these institutions were so very different in the two localities, their similarity is a strong argument in favour of their being primitive and against an explanation of their arrestment by a factor which affects only one of them.

33 The fact that education is in Plato's state a class prerogative has been overlooked by some enthusiastic educationists who credit Plato with the idea

CHAPTER 4/NOTES 34-39 1 99

of making education independent of financial means; they do not see that
the evil is the class prerogative as such, and that it is comparatively unimportant whether this prerogative is based upon the possession of money or upon any other criterion by which membership of the ruling class is determined. Cp. notes 12 and 13 to chapter 7, and text.

34 Cp. Republic, 460c. (See also note 31 to this chapter.) Regarding Plato's recommendation of infanticide, see Adam, op. cit., vol. I, p. 299, note to 460c18, and pp. 357 ff. Although Adam rightly insists that Plato was in favour of infanticide, and although he rejects as 'irrelevant' all attempts 'to acquit Plato of sanctioning' such a dreadful practice, he tries to excuse Plato by pointing out 'that the practice was widely prevalent in ancient Greece'. But it was not so in Athens. Plato chooses throughout to prefer the ancient Spartan barbarism and racialism to the enlightenment of Pericles' Athens; and for this choice he must be held responsible. For a hypothesis explaining the Spartan practice, see note 7 to chapter 10 (and text); see also the cross references given there.

The later quotations in this paragraph which favour applying the principles of animal breeding to man are from Republic, 459b (cp. note 39 to chapter 8, and text); those on the analogy between dogs and warriors, etc., from the Republic, 4.043, 375a; 376a/b; and 376b.

35 The two quotations before the note-number are both from Republic, 375b. The next following quotation is from 416a (cp. note 28 to this chapter); the remaining ones are from 3750-0. The problem of blending opposite 'natures' (or even Forms; cp. notes 18-20, chapter 5, and text and note 39 to chapter 8) is one of Plato's favourite topics. (With Aristotle, it merges into the doctrine of the mean.)
38 The quotations are from Republic, 4 toe; 4iod; 4106; 41 16/41 2 a and 4i2b.

87 In the Laws (68ob, ff.) Plato himself treats Crete with some irony because of its barbarous ignorance of literature. This ignorance extends even to Homer, whom the Cretan interlocutor does not know, and of whom he says: 'foreign poets are very little read by Cretans'. ('But they are read in Sparta', rejoins the Spartan interlocutor.)

88 For Plato's view on Sparta's treatment of the human cattle, see note 29 to this chapter, Republic, 548e/54ga, where the timocratic man is compared with Plato's brother Glaucon: 'He would be harder' (than Glaucon)' and less musical'; the continuation of this passage is quoted in the text to note 29. Thucydides reports (IV, 80) the treacherous murder of the 2,000 helots; the best helots were selected for death by a promise of freedom. It is almost certain that Plato knew Thucydides well, and we can be sure that he had more direct sources of information as well.

For Plato's views on Athens' slack treatment of slaves, see note 18 to this chapter.

89 Considering the decidedly anti-Athenian and therefore anti-literary tendency of the Republic, it is a little difficult to explain why so many educationists are so enthusiastic about Plato's educational theories. I can see only three likely explanations. Either they do not understand the Republic, in spite of its most outspoken hostility towards the then existing Athenian literary education; or they are simply flattered by Plato's rhetorical emphasis upon the political power of education, just as so many philosophers are, and even
some musicians (see text to note 41); or both.

It is also difficult to see how lovers of Greek art and literature can find encouragement in Plato, who, especially in the Tenth Book of the Republic, launched a most violent attack against all poets and tragedians, and especially against Homer (and even Hesiod). See Republic, 600a, where Homer is put below the level of a good technician or mechanic (who would be generally despised by Plato as banausic and depraved; cp. Rep., 4956 and 5900 and note 4 to chapter 11); Republic, 600c, where Homer is put below the level of the Sophists Protagoras and Prodicus (see also Gomperz, Greek Thinkers, German ed., II, 401); and Republic, 605a/b, where poets are bluntly forbidden to enter into any well-governed city.

These clear expressions of Plato's attitude, however, are usually passed over by the commentators who dwell, on the other hand, on remarks like the one made by Plato in preparing his attack on Homer ("... though love and admiration for Homer hardly allow me to say what I have to say"); Rep., 595b). Adam comments on this (note to 595bn) by saying that 'Plato speaks with real feeling'; but I think that Plato's remark only illustrates a method fairly generally adopted in the Republic, namely, that of making some concession to the reader's sentiments (cp. chapter 10, esp. text to note 65) before the main attack upon humanitarian ideas is launched.

40 On the rigid censorship aimed at class discipline, see Republic, 377e, ff., and especially 378c: 'Those who are to be the
guardians of our city ought
to consider it the most pernicious crime to quarrel
easily with one another.*
It is interesting that Plato does not slate this
political principle at once, when
introducing his theory of censorship in 3760, ff., but
that he speaks first only
of truth, beauty, etc. The censorship is further
tightened up in 595a, ff.,
esp. 605a/b (see the foregoing note, and notes 18 to 22
to chapter 7, and text).

On Plato's forgctfulness of his principle (Rep.,
4ioe~4i2b, sec note 36
to this chapter) that music has to strengthen the
gentle element in man as
opposed to the fierce, see especially 3993, f., where
modes of music are
demanded which do not make men soft, but are * fit for
men who arc warriors '.
Cp. also the next note, (2). It must be made clear that
Plato has not
* forgotten ' a previously announced principle, but
only that principle to which
his discussion is going to lead up. *

41 (i) On Plato's attitude towards music, especially
music proper, see, for
instance, Republic, 397b, ff.; 3986, ff.; 40od, ff.;
4iob, 424^ f., 546d.
Laws, 6576, ff.; 673a, 7oob, ff., 798d, ff, 8oid, ff,
8o2b, ff., 8i6c. The
attitude is, fundamentally, that one must ' beware of
changing to a new mode
of music ', since ' Any change in the mode of music is
always followed by a
change in the . . state. So says Damon, and I believe
him.' (Rep., 424C.)
Plato, as usual, follows the Spartan example. Adam (op.
cit., vol. I, p. 216,
ote to 424C20 ; italics mine ; cp. also his
references) says that * the connection
between musical and political changes . . was
recognized universally
throughout Greece, and particularly at Sparta, where .
. Timotheus had his
lyre confiscated for adding to it four new strings '.
That Sparta's procedure
inspired Plato cannot be doubted ; its universal
recognition throughout
Greece, and especially in Periclean Athens, is most improbable. (Gp. (2) of
this note.)

(2) In the text I have called Plato's attitude towards music (cp. esp.
Rep > 398e, ff.) superstitious and backward if compared with * a more enlightened
contemporary criticism '. The criticism I have in mind is that of the
anonymous writer, probably a musician of the fifth (or the early fourth)
century, the author of what is now known as the
thirteenth piece of Grenfell-
Hunt, The Hibeh Papyri, 1906, p. 45 ff. It seems
possible that the writer is
one of * the various musicians who criticize Socrates '
(i.e. the ' Socrates ' of
Plato's Republic), mentioned by Aristotle (in his
equally reactionary Politics,
1 342 b) ; but the criticism of the anonymous writer
goes much further than
Aristotle indicates. Plato (and Aristotle) believed
that certain musical modes,
for instance, the ' slack ' Ionian and Lydian modes,
made people soft and
effeminate, while others, especially the Dorian mode,
made them brave.
This view is attacked by the anonymous writer. ' They
say ', he writes, * that
some modes produce temperate and others just men ;
others, again, heroes.

CHAPTER 4/NOTES 42-43 20I

and others cowards.' He proceeds to show that this view
is silly, since some
of the most war-like of the Greek tribes use modes
reputed to produce cowards,
while certain professional (opera) singers habitually
sing in the * heroic ' 
mode without ever becoming heroes. This criticism might
have been directed
against the Athenian musician Damos, quoted by Plato as
an authority, a
friend of Pericles (who was liberal enough to tolerate
a pro-Spartan attitude in the field of artistic criticism). But it might easily have been directed against Plato himself.

(3) In view of the fact that I am attacking a 'reactionary' attitude towards music, I may perhaps remark that my attack is in no way inspired by a personal sympathy for 'progress' in music. In fact, I happen to like old music (the older the better) and to dislike modern music intensely (especially nearly everything written since the day when Wagner began to write music). I am altogether against *futurism*, whether in the field of art or of morals (cp. chapter 22). But I am also against imposing one's likes and dislikes upon others, and against censorship in such matters. We can love and hate, especially in art, without favouring legal measures for suppressing what we hate, or for canonizing what we love.

42 Gp. Republic, 5373; and 4666-4676.

The characterization of modern totalitarian education is due to A. Kolnai, The War against the West (1938), p. 318.

43 Plato's remarkable theory that the state, i.e. centralized and organized political power, originates through a conquest (the subjugation of a sedentary agricultural population by nomads or hunters) was, as far as I know, first re-discovered (if we discount some remarks by Machiavelli) by Hume in his criticism of the historical version of the contract theory (cp. his Political Discourses, 1752, the chapter Of the Original Contract): 'Almost all the governments', Hume writes, *which exist at present, or of which there remains any record in history, have been founded originally on usurpation or conquest, or both . . .' The theory was next revived by Renan, in What is a Nation?
(1882), and by Nietzsche in his Genealogy of Morals (1887); see the third German edition of 1894, p. 9. The latter writes of the origin of the *state*:

'Some horde of blonde beasts, a conquering master race with a war-like organization... lay their terrifying paws heavily upon a population which is perhaps immensely superior in numbers... This is the way in which the "state" originates upon earth; I think that the sentimentality which lets it originate with a "contract", is dead.' This theory appeals to Nietzsche because he likes these blonde beasts. But it has been also more recently proffered by F. Oppenheimer (The State, transl. Gitterman, 1914, p. 68); by a Marxist, K. Kautsky (in his book on The Materialist Interpretation of History); and by W. G. Macleod (The Origin and History of Politics, 1931).

I think it very likely that something of the kind described by Plato, Hume, and Nietzsche has happened in many, if not in all, cases. I am speaking only about *states* in the sense of organized and even centralized political power.

I may mention that Toynbee has a very different theory. But before discussing it, I wish first to make it clear that from the anti-historicist point of view, the question is of no great importance. It is perhaps interesting in itself to consider how *states* originated, but it has no bearing whatever upon the sociology of states, as I understand it, i.e. upon political technology (see chapters 3, 9, and 25).

Toynbee's theory does not confine itself to *states* in the sense of organized and centralized political power. He discusses, rather, the *origin of civilizations*. But here begins the difficulty; for what he calls *civilizations* are, in part, *states* (as here described), in part societies like that of the Eskimos,
which are not states; and if it is questionable whether 'states' originate according to one single scheme, then it must be even more doubtful when we

202 CHAPTER 4/NOTES 44-45

consider a class of such diverse social phenomena as the early Egyptian and Mesopotamian states and their institutions and technique on the one side, and the Eskimo way of living on the other.

But we may concentrate on Toynbee's description (A Study of History, vol. I, 305 ff.) of the origin of the Egyptian and Mesopotamian 'civilizations'. His theory is that the challenge of a difficult jungle environment rouses a response from ingenious and enterprising leaders; they lead their followers into the valleys which they begin to cultivate, and found states. This (Hegelian and Bergsonian) theory of the creative genius as a cultural and political leader appears to me most romantic. If we take Egypt, then we must look, first of all, for the origin of the caste system. This, I believe, is most likely the result of conquests, just as in India where every new wave of conquerors imposed a new caste upon the old ones. But there are other arguments. Toynbee himself favours a theory which is probably correct, namely, that animal breeding and especially animal training is a later, a more advanced and a more difficult stage of development than mere agriculture, and that this advanced step is taken by the nomads of the steppe. But in Egypt we find both agriculture and animal breeding, and the same holds for most of the early * states' (though not for all the American ones, I gather). This seems to be a sign that these states contain a nomadic element;
and it seems only natural to venture the hypothesis that this element is due to nomad invaders imposing their rule, a caste rule, upon the original agricultural population. This theory disagrees with Toynbee's contention (op. cit. 9 Ill, ^3 f.) that nomad-built states usually wither away very quickly. But the fact that many of the early caste states go in for the breeding of animals has to be explained somehow.

The idea that nomads or even hunters constituted the original upper class is corroborated by the age-old and still surviving upper-class traditions according to which war, hunting, and horses, are the symbols of the leisured classes; a tradition which formed the basis of Aristotle's ethics and politics, and is still alive, as Veblen (The Theory of the Leisure Class) and Toynbee himself have shown; and to these traditions we can perhaps add the animal breeder's belief in racialism, and especially in the racial superiority of the upper class. The latter belief which is so pronounced in caste states and in Plato and in Aristotle is held by Toynbee to be * one of the .. sins of our .. modern age * and * something alien from the Hellenic genius * (op. cit., Ill, 93). But although many Greeks may have developed beyond racialism, it seems likely that Plato's and Aristotle's theories are based on old traditions; especially in view of the fact that racial ideas played such a role in Sparta.

45 (i) Spengler's Decline of the West is not in my opinion to be taken seriously. But it is a symptom; it is the theory of one who believes in an upper class which is facing defeat. Like Plato, Spengler tries to show that ' the world * is to be blamed, with its general law of decline and death. And
like Plato, he demands (in his sequel, Prussianism and Socialism) a new order, a desperate experiment to stem the forces of history, a regeneration of the Prussian ruling class by the adoption of a 'socialism' or communism, and of economic abstinence. Concerning Spengler, I largely agree with L. Nelson, who published his criticism under a long ironical title whose beginning may be translated: 'Witchcraft: Being an Initiation into the Secrets of Oswald Spengler's Art of Fortune Telling, and a Most Evident Proof of the Irrefutable Truth of His Soothsaying', etc. I think that this is a just characterization of Spengler. Nelson, I may add, was one of the first to oppose what I call historicism (following here Kant in his criticism of Herder; cp. chapter 12, note 56).

(2) My remark that Spengler's is not the last Decline and Fall is meant especially as an allusion to Toynbee. Toynbee's work is so superior to Spengler's that I hesitate to mention it in the same context; but the superiority is due mainly to Toynbee's wealth of ideas and to his superior knowledge (which manifests itself in the fact that he does not deal, as Spengler does, with everything under the sun at the one time). But the aim and method of the investigation is similar. It is most decidedly historicist. And it is, fundamentally, Hegelian (although I do not see that Toynbee is aware of that). His *criterion of the growth of civilizations* which is *progress towards self-determination* shows this clearly enough; for Hegel's law of progress towards 'self-consciousness' and *freedom* can be only too easily
recognized. (Toynbee's Hegelianism seems to come somehow through Bradley, as may be seen, for instance, by his remarks on relations, op. cit., Ill, 223: 'The very concept of "relations" between "things" or "beings" involves 'a' logical contradiction... How is this contradiction to be transcended?' (I cannot enter here into a discussion of the problem of relations. But I may state dogmatically that all problems concerning relations can be reduced, by certain simple methods of modern logic, to problems concerning properties, or classes; in other words, peculiar philosophical difficulties concerning relations do not exist. The method mentioned is due to N. Wiener and K. Kuratowski; see Quine, A System of Logistic, 1934, p. 16 ff. 1). Now I do not believe that to classify a work as belonging to a certain school is to dismiss it; but in the case of Hegelian historicism I think that it is so, for reasons to be discussed in the second volume of this book.

Concerning Toynbee's historicism, I wish to make it especially clear that I doubt very much indeed whether civilizations are born, grow, break down, and die. I am obliged to stress this point because I myself use two of the terms used by Toynbee, in so far as I speak of the 'breakdown' and of the *arresting* of societies. But I wish to make it clear that my term 'breakdown' refers not to all kinds of civilizations but to one particular kind: the magical or tribal *closed society*. Accordingly, I do not believe, as Toynbee does, that Greek society suffered its 'breakdown' in the period of the Peloponnesian war; and I find the symptoms of the breakdown which Toynbee describes much earlier. (Gp. with this notes 6 and 8 to chapter 10, and text.) And regarding 6 arrested 'societies, I apply this term, exclusively, either to societies that cling to their magical forms by closing
themselves up, by force, against the influence of open societies, or to societies that return to the tribal cage.

Also I do not think that our Western Civilization is just one member of a species. I think that there are many closed societies who may suffer all kinds of fates; but an "open society" can only go on, or be arrested and forced back into the cage, i.e. to the beasts. (Cp. also chapter 10, esp. the last note.)

(3) Regarding the Decline and Fall stories, I may mention that nearly all of them stand under the influence of Heraclitus' remark: "They fill their bellies like the beasts", and of Plato's theory of the low animal instincts. I mean to say that they all try to show that the decline is due to an adoption (by the ruling class) of these "lower" standards which are allegedly natural to the working classes. In other words, and putting the matter crudely but bluntly, the theory is that civilizations, like the Persian and the Roman empires, decline owing to overfeeding. (Gp. note 19 to chapter 10.)

NOTES- TO CHAPTER 5

1 The 'charmed circle' is a quotation from Burnet, Greek Philosophy, I, 106, where similar problems are treated. I do not, however, agree with Burnet that "in early days the regularity of human life had been far more clearly apprehended than the even course of nature". This presupposes the
period, i.e. the period of the dissolution of the *charmed circle of law and
custom *. Moreover, natural periods (the seasons, etc.
; cp. note 6 to chapter
2, and Plato (?), Epinomis, 978d, ff.) must have been
apprehended in very early days. For the distinction between natural and
normative laws, see esp. note 18 (4) to this chapter.

2 Heraclitus, B 29, D 2 94 ; cp. note 7 (2) to chapter
2; also note 6 to that chapter, and text. See also Burnet, loc. cit. y
who gives a different interpretation; he thinks that ' when the regular
course of nature began to be observed, no better name could be found for it than
Right or Justice . . which properly meant the unchanging custom that guided
human life.' I do not believe that the term meant first something
social and was then extended, but I think that both social and natural regularities
(' order ') were originally undifferentiated, and interpreted as magical.

8 The opposition is expressed sometimes as one between ' nature ' and
* law ' (or ' norm ' or * convention *), sometimes as one between ' nature '
and the ' positing ' or ' laying down ' (viz., of normative laws), and sometimes
as one between ' nature ' and ' art ', or ' natural ' and ' artificial '.

The antithesis between nature and convention is often said (on the
authority of Diogenes Laertius 9 II, 16 and 4 ;
Doxogr., 564^ to have been introduced by Archelaus, who is said to have been the
teacher of Socrates. But I think that Plato makes it clear enough that he considers * the Theban
poet Pindar * to be the originator of the antithesis (cp. notes 10 and 28 to this
chapter). Apart from Pindar's fragments (quoted by Plato ; see also
Herodotus, III, 38), and some remarks by Herodotus (loc. cit.), one of the
earliest original sources preserved is the Sophist Antiphon's fragments On Truth (see notes 1 1 and 1 2 to this chapter) . According to Plato's Protagoras', the Sophist Hippias seems to have been a pioneer of similar views (see note 1 3 to this chapter). But the most influential early treatment of the problem seems to have been that of Protagoras himself, although he may possibly have used a different terminology. (It may be mentioned that Democritus dealt with the antithesis which he applied also to such social institutions as language; and Plato did the same in the Cratylus, e.g. 3846.)

4 A very similar point of view can be found in Russell's * A Free Man's Worship ' (in Mysticism and Logic) ; and in the last chapter of Sherrington's Man on His Nature.

6 (i) Positivists will reply, of course, that the reason why norms cannot be derived from factual propositions is that norms are meaningless; but this indicates only that (with Wittgenstein's Tractatus) they define ' meaning ' arbitrarily in such a way that only factual propositions are called * meaningful '. (For this point, see also my Logik der Forschung, pp. 8 ff., and 21.) The followers of ' psychologism ', on the other hand, will try to explain norms as habits, and standards as points of view. But although the habit not to steal certainly is a fact, it is necessary, as explained in the text,' to distinguish this fact from the corresponding norm. On the question of norms, I fully agree with most of the views expressed by K. Menger. He is the first, I believe, to develop the foundations of a logic of norms (in his book, Moral, Wille und Weltgestaltung, 1935). I may perhaps express here my opinion that the reluctance to admit that norms are something important and irreducible is one of the main sources
of the intellectual and other weaknesses of the more progressive circles in our present time.

(2) Concerning my contention that it is impossible to derive a sentence stating a norm or decision from a sentence stating a fact, the following may be added. In analysing the relations between sentences and facts, we are moving in that field of logical inquiry which A. Tarski has called Semantics (cp. note 29 to chapter 3 and note 23 to chapter 8).

CHAPTER 5/NOTES 6-J 205

corcepts of semantics is the concept of truth. As shown by Tarski, it is possible (within what Carnap calls a semantical system) to derive a descriptive statement like 'Napoleon died on St. Helena' from the statement 'Mr. A said that Napoleon died on St. Helena', in conjunction with the further statement that what Mr. A said was true. (And if we use the term 'fact' in such a wide sense that we not only speak about the fact described by a sentence but also about the fact that this sentence is true, then we could even say that it is possible to derive 'Napoleon died on St. Helena' from the two 'facts' that Mr. A said it, and that he spoke the truth.) Now there is no reason why we should not proceed in an exactly analogous fashion in the realm of norms. We might then introduce, in correspondence to the concept of truth, the concept of the validity of a norm. This would mean that a certain norm JV could be derived (in a kind of semantic of norms) from a sentence stating that JV is valid. (And again, if we use the term 'fact' in such a wide sense that we speak about the fact that a norm is valid, then we could even derive norms from facts. This,
however, does not impair the correctness of our considerations in the text which are concerned solely with the impossibility of deriving norms from psychological or sociological or similar, i.e. non-semantic facts.)

6 Cp. also the last note (70) to chapter 10.

Although my own position is, I believe, clearly enough implied in the text, I may perhaps briefly formulate what seems to me the most important principles of humanitarian and equalitarian ethics.

1 i) Tolerance towards all who are not intolerant and who do not propagate intolerance. (For this exception, cp. what is said in notes 4 and 6 to chapter 7.) This implies, especially, that the moral derisions of others should be treated with respect, as long as such decisions do not conflict with the principle of tolerance.

(2) The recognition that all moral urgency has its basis in the urgency of suffering or pain. It is, I believe, the greatest mistake of utilitarianism (and other forms of hedonism) that it does not recognize that from the moral point of view suffering and happiness must not be treated as symmetrical; that is to say, the promotion of happiness is in any case much less urgent than the rendering of help to those who suffer, and the attempt to prevent suffering. (The latter task has little to do with *matters of taste*, the former much.) Cp. also note 2 to chapter 9.

7 Cp. Burnet, Greek Philosophy, I, 117. Protagoras' doctrine referred to in this paragraph is to be found in Plato's dialogue Protagoras, 32 2a, ff.; cp. also the Theaetetus, esp. 172b (see also note 27 to this chapter).

The difference between Platonism and Protagoreanism can
perhaps be briefly expressed as follows:

(Platonism :) There is an inherent (natural) order of justice in the world, i.e. the original or first order in which nature was created. Thus the past is good, and any development leading to new norms is bad.

(Protagoreanism :) Man is the moral being in this world. Nature is neither moral nor immoral. Thus it is possible for man also to improve things. It is not unlikely that Protagoras was influenced by Xenophanes, one of the first to express the attitude of the open society, and to criticize Hesiod's historical pessimism: 'In the beginning, the Gods did not show to man all he was wanting; but in the course of time, he may search for the better, and find it.' (Cp. Diels 2 18.) It seems that Plato's nephew and successor Speusippus returned to this progressive view (cp. Aristotle's Metaphysics, io72b30 and note 11 to chapter 11) and that the Academy adopted with him a more liberal attitude in the field of politics also.

Concerning the relation of the doctrine of Protagoras to the tenets of religion, it may be remarked that he believed God to work through man. I do not see how this position can contradict that of Christianity. Compare with it for instance K. Barth's statement (Credo, 1936, p. 188): 'The Bible is human document* (i.e. man is God's instrument).

8 Socrates' advocacy of the autonomy of ethics (closely related with his insistence that problems of nature do not matter) is
expressed especially in
his doctrine of the self-sufficiency or autarchy of the
* virtuous ' individual
That this theory contrasts strongly with Plato's views
of the individual will
be seen later ; cp. especially notes 25 to this chapter
and 36 to the next, anc
text. (Cp. also note 56 to chapter 10.)

We cannot, for instance, construct institutions which
work independently
of how they are being * manned '. With these problems,
cp. chapter
(text to notes 7-8, 22-23), and especially chapter 9.

10 For Plato's discussion of Pindar's naturalism, see
esp. Gorgias, 484^ 
488b ; Laws, 6gob (quoted below in this chapter ; cp. 
note 28) ; 7*4e 
Sgoa/b. (See also Adam's note to Rep., 35gc20.)

11 Antiphon uses the term which, in connection with
Parmenides anc
Plato, I have translated above by ' delusive opinion ' 
(cp. note 1 5 to chaptei 
3) ; and he likewise opposes it to ' truth '. Cp. also 
Barker's translation ir
Greek Political Theory, I Plato and His Predecessors 
(1918), 83.

note, (2).

13 Hippias is quoted in Plato's Protagoras, 33 ye. For
the next four quota-
tions, cp. (i) Euripides Ion, 854 ft'. ; and (2) his 
Phoenissae, 538 ; cp. alsc 
Gomperz, Greek Thinkers (German ed., I, 325) ; and 
Barker, op. cit., 75 ;
cp. also Plato's violent attack upon Euripides in 
Republic, 568a-d. Further-
more (3) Alcidamas inSchol. to Aristotle's Rhet., I,
13, I373b18. (4) Lycophor
in Aristotle's Fragm., 91 (Rose) ; (cp. also the Pseudo 
Plutarch, De Nobil.,
18.2). For the Athenian movement against slavery, cp.
text to note 18 tc 
chapter 4, and note 29 (with further references) to the
same chapter; also note 18 to chapter 10.

(1) It is worth noting that most Platonists show little sympathy with this equalitarian movement. Barker, for instance, discusses it under the heading 'General Iconoclasm'; cp. op. cit., 75. (See also the second quotation from Field's Plato quoted in text to note 3, chapter 6.) This lack of sympathy is due, undoubtedly, to Plato's influence.

(2) For Plato's and Aristotle's anti-equalitarianism mentioned in the text, next paragraph, cp. also especially note 49 (and text) to chapter 8, and notes 3 to 4 (and text) to chapter n.

This anti-equalitarianism and its devastating effects has been clearly described by W. W. Tarn in his excellent paper 'Alexander the Great and the Unity of Mankind' (Proc. of the British Acad., XIX, 1933, p. 123 ff.), Tarn recognizes that in the fifth century, there may have been a movement towards 'something better than the hard-and-fast division of Greeks and barbarians; but *he says, 4 this had no importance for history, because anything of the sort was strangled by the idealist philosophies. Plato and Aristotle left no doubt about their views. Plato said that all barbarians were enemies by nature; it was proper to wage war upon them, even to the point of enslaving them. Aristotle said that all barbarians were slaves by nature. *' (p. 124, italics mine). I fully agree with Tarn's appraisal of the pernicious anti-humanitarian influence of the idealist philosophers, i.e. of Plato and Aristotle. I also agree with Tarn's emphasis upon the immense significance of equalitarianism, of the idea of the unity of mankind (cp. op. cit., p. 147).

The only point in which I cannot fully agree is Tarn's estimate of the fifth-
century equalitarian movement, and of the early cynics. I suppose that he is right in holding that the historical influence of these movements was small in comparison with that of Alexander. But I believe that he would have rated these movements more highly if he had only followed up the parallelism.

CHAPTER 5/NOTES 14-18 2OJ

between the cosmopolitan and the anti-slavery movement. The parallelism between the relations Greeks : barbarians and free men : slaves is clearly enough shown by Tarn in the passage here quoted; and if we consider the unquestionable strength of the movement against slavery (see esp. note 18 to chapter 4) then the scattered remarks against the distinction between Greeks and barbarians gain much in significance. Gp. also Aristotle, Politics, III, 5, 7 (i278a); IV (VI), 4, 16 (isigb) and III, 2, 2 (i275b). See also note 48 to chapter 8.

14 For the theme ' return to the beasts ', cp. chapter 10, note 70, and text.

15 For Socrates' doctrine of the soul, see text to note 44 to chapter 10.

16 The term *natural right* in an equalitarian sense came to Rome through the Stoics (there is the influence of Antisthenes to be considered; cp. note 48 to chapter 8) and was popularized by Roman Law (cp. Institutiones, II, 1,2; I, 2, 2). It is used by Thomas Aquinas, also (Summa, II, 91, 2). The confusing use of the term 'natural law' instead of 'natural right' by modern Thomists is to be regretted, as well as the small emphasis they put upon equalitarianism.
The monistic tendency which first led to the attempt to interpret norms as natural has recently led to the opposite attempt, namely, to interpret natural laws as conventional. This (physical) type of conventionalism has been based, by Poincaré", on the recognition of the conventional or verbal character of definitions. Poincaré, and more recently Eddington, point out that we define natural entities by the laws they obey. From this the conclusion is drawn that these laws, i.e. the laws of nature, are definitions, i.e. verbal conventions. Cp. Eddington's letter in Nature 148 (1941), 141 : * The elements ' (of physical theory) * . . can only be defined . . by the laws they obey; so that we find ourselves chasing our own tails in a purely formal system.' An analysis and a criticism of this form of conventionalism can be found in my Logik der Forschung, esp. pp. 40 fF.

(i) The hope of getting some argument or theory to share our responsibility is, I believe, one of the basic motives of *scientific* ethics. *Scientific* ethics is in its absolute barrenness one of the most amazing of social phenomena. What does it aim at? At telling us what we ought to do, i.e. at constructing a code of norms upon a scientific basis, so that we need only look up the index of the code if we are faced with a difficult moral decision? This would clearly be absurd; quite apart from the fact that if it could be achieved, it would destroy all personal responsibility and therefore all ethics. Or would it give scientific criteria of the truth and falsity of moral judgements, i.e. of judgements involving such terms as 'good' or *bad'? But it is clear that moral judgements are absolutely irrelevant. Only a scandal-monger is interested in judging people or their actions; 'judge not' appears to some of us one of the fundamental and much too
little appreciated laws of humanitarian ethics. (We may have to disarm and to imprison a criminal in order to prevent him from repeating his crimes, but too much of moral judgement and especially of moral indignation is always a sign of hypocrisy and pharisaism.) Thus an ethics of moral judgements would be not only irrelevant but indeed an immoral affair. The all-importance of moral problems rests, of course, on the fact that we can act with intelligent foresight, and that we can ask ourselves what our aims ought to be, i.e. how we ought to act.

Nearly all moral philosophers who have dealt with the problem of how we ought to act (with the possible exception of Kant) have tried to answer it either by reference to 'human nature' (as did even Kant, when he referred to human reason) or to the nature of *the good*. The first of these ways leads nowhere, since all actions possible to us are founded upon 'human nature', so that the problem of ethics could also be put by asking which elements in human nature I ought to follow and to develop, and which sides I ought to suppress or to control. But the second of these ways also leads nowhere; for given an analysis of 'the good' in form of a sentence like: 'The good is such and such' (or 'such and such is good'), we would always have to ask: What about it? Why should this concern me? Only if the word 'good' is used in an ethical sense, i.e. only if it is used to mean *that which I ought to do*, could I derive from the information 'x is good' the conclusion that I ought to do x. In other words, if the word good
is to have any ethical significance at all, it must be defined as ' that which I (or we) ought to do (or to promote) '. But if it is so defined, then its whole meaning is exhausted by the defining phrase, and it can in every context be replaced by this phrase, i.e. the introduction of the term *good* cannot materially contribute to our problem. (Cp. also note 49 (3), to chapter 11.)

All the discussions about the definition of the good, or about the possibility of defining it, are therefore quite useless. They only show how far 'scientific' ethics is removed from the urgent problems of moral life. And they thus indicate that 'scientific' ethics is a form of escape, and escape from the realities of moral life, i.e. from our moral responsibilities. (In view of these considerations it is not surprising to find that the beginning of *scientific* ethics, in the form of ethical naturalism, coincides with what may be called the discovery of personal responsibility. Gp. what is said in chapter 10, text to notes 27-38 and 55-7, on the open society and the Great Generation.)

(2) It may be fitting in this connection to refer to a particular form of the escape from the responsibility discussed here, as exhibited especially by the juridical positivism of the Hegelian school, as well as by a closely allied spiritual naturalism. That the problem is still significant may be seen from the fact that an author of the excellence of Catlin remains in this important point (as in a number of others) dependent upon Hegel; and my analysis will take the form of a criticism of Gatlin's arguments in favour of spiritual naturalism, and against the distinction between laws of nature and normative laws (cp. G. E. G. Gatlin, A Study of the Principles of Politics, 1930, pp. 96-99).
Catlin begins by making a clear distinction between the laws of nature and 'laws... which human legislators make'; and he admits that, at first sight the phrase 'natural law', if applied to norms, appears to be patently unscientific, since it seems to fail to make a distinction between that human law which requires enforcement and the physical laws which are incapable of breach. But he tries to show that it only appears to be so, and that 'our criticism' of this way of using the term 'natural law' was 'too hasty'. And he proceeds to a clear statement of spiritual naturalism, i.e. to a distinction between 'sound law' which is 'according to nature', and other law: c Sound law, then, involves a formulation of human tendencies, or, in brief, is a copy of the "natural" law to be "found" by political science. Sound law is in this sense emphatically found and not made. It is a copy of natural social law (i.e. of what I called 'sociological laws'); cp. text to note 8 to this chapter). And he concludes by insisting that in so far as the legal system becomes more rational, its rules * cease to assume the character of arbitrary commands and become mere deductions drawn from the primary social laws * (i.e. from what I should call *sociological laws*).

(3) This is a very strong statement of spiritual naturalism. Its criticism is the more important as Gatlin combines his doctrine with a theory of 'social engineering' which may perhaps at first sight appear similar to the one advocated here (cp. text to note 9 to chapter 3 and text to notes 1-3 and 8-11 to chapter 9). Before discussing it, I wish to explain why I consider Catlin's view to be dependent on Hegel's positivism. Such an explanation is necessary, because Catlin uses his naturalism in order to distinguish between 'sound *
and other law; in other words, he uses it in order to distinguish between
*just* ' and ' unjust ' law; and this distinction certainly does not look like
positivism, i.e. the recognition of the existing law as the sole standard of justice.
In spite of all that, I believe that Catlin's views are very close to positivism;
my reason being that he believes that only *sound* ' law can be effective, and
in so far ' existent ' in precisely Hegel's sense. For Catlin says that when our
legal code is not *sound*, i.e. not in accordance with the laws of human
nature, then 'our statute remains paper'. This statement is purest positivism;
for it allows us to deduce from the fact that a certain code is not only c paper'
but successfully enforced, that it is *sound', or in other words, all legislation
which does not turn out to be merely paper is a copy of human nature and
therefore just.

(4) I now proceed to a brief criticism of the argument proffered by Catlin
against the distinction between (a) laws of nature
which cannot be broken,
and (b) normative laws, which are man-made, i.e.
enforced by sanctions;
a distinction which he himself makes so very clearly at first. Catlin's argument
is a twofold one. He shows (a) that laws of nature also
are man-made, in
a certain sense, and that they can, in a sense, be
broken; and (b) that in a
certain sense normative laws cannot be broken. I begin
with (a) ' The
natural laws of the physicist ', writes Catlin, ' are
not brute facts, they are
rationalizations of the physical world, whether
superimposed by man or
justified because the world is inherently rational and
orderly.' And he
proceeds to show that natural laws can be nullified when fresh facts compel us to recast the law. My reply to this argument is this. A statement intended as a formulation of a law of nature is certainly man-made. We make the hypothesis that there is a certain invariable regularity, i.e. we describe the supposed regularity with the help of a statement, the natural law. But as scientists, we are prepared to learn, from nature, that we have been wrong; we are prepared to recast the law if fresh facts which contradict our hypothesis show that our supposed law was no law, since it has been broken. In other words, by accepting nature's nullification, the scientist shows that he accepts a hypothesis only as long as it has not been falsified; which is the same as to say that he regards a law of nature as a rule which cannot be broken, since he accepts the breaking of his rule as proof that his rule did not formulate a law of nature. Furthermore: although the hypothesis is man-made, we can do nothing to prevent its falsification. This shows that, by making the hypothesis, we have not created the regularity which it is intended to describe.

(b) "It is not true," says Catlin, "that the criminal "breaks" the law when he does the forbidden act... the statute does not say: "Thou canst not"; it says, "Thou shalt not, or this punishment will be inflicted." As command, Catlin continues, "it may be broken, but as law, in a very real sense, it is only broken when the punishment is not inflicted... So far as the law is perfected and its sanctions executed, ... it approximates to physical law." The reply to this is simple. In whichever sense we speak of 'breaking' the law, the juridical law can be broken; no verbal adjustment can alter that. Let us accept Catlin's view that a criminal cannot 'break' the law, and that it is only 'broken' if the criminal does not receive the
punishment prescribed by
the law. But even from this point of view, the law can
be broken; for instance,
by officers of the state who refuse to punish the
criminal. And even in a
state where all sanctions are, in fact, executed, the
officers could, if they chose,
prevent such execution, and so 'break' the law in
Catlin's sense. (That they
would thereby 'break' the law in the ordinary sense
also, i.e. that they
would become criminals, and that they might ultimately
perhaps be punished,
is quite another question.) In other words: A
normative law is always
enforced by men and by their sanctions, and it is
therefore fundamentally
different from a hypothesis. The position is really as
simple as it can be.

210 CHAPTER 5 /NOTES I Q-26

Legally, we can enforce the suppression of murder, or
of acts of kindness;
of falsity, or of truth; of justice or of injustice.
But we cannot force the sun
to alter its course. No amount of argument can bridge
this gap.

19 The 'nature of happiness and misery' is referred
to in the Theaetetus,
l 75c. For the close relationship between 'nature'
and 'Form' or 'Idea',
cp. especially Republic, 597a~d, where Plato first
discusses the Form or Idea
of a bed, and then refers to it as 'the bed which
exists by nature, and which
was made by God' (597b). In the same place, he
proffers the corresponding
distinction between the 'artificial' (or the '
fabricated' thing, which is an
'imitation') and 'truth'. Cp. also Adam's note to
Republic, 597bio (with
the quotation from Burnet given there) and the notes to
476^13, 501bg,
525CI5; furthermore Theaetetus, i74b (and Cornford's
note i to p. 85 in his
Plata's Theory of Knowledge). See also Aristotle's Metaphysics, ioi5ai4.

20 For Plato's attack upon art, see the last book of the Republic, and especially the passages Republic 600a-605b mentioned in note 39 to chapter 4.

21 Cp. notes 11,12 and 13 to this chapter, and text. My contention that Plato agrees at least partly with Antiphon's naturalist theories (although he does not, of course, agree with Antiphon's equalitarianism) will appear strange to many, especially to the readers of Barker, op. cit. And it may surprise them even more to hear the opinion that the main disagreement was not so much a theoretical one, but rather one of moral practice, and that Antiphon and not Plato was morally in the right, as far as the practical issue of equalitarianism is concerned. (For Plato's agreement with Antiphon's principle that nature is true and right, see also text to notes 23 and 28, and note 30 to this chapter.)

22 These quotations are from Sophist, 266b and 2656. But the passage also contains (265a a criticism (similar to Laws, quoted in text to notes 23 and 30 in this chapter) of what may be described as a materialist interpretation of naturalism such as perhaps held by Antiphon's type, namely ' the belief . . . that' nature . . generates without intelligence '.

23 Cp. Laws, 8923 and c. For the doctrine of the affinity of the soul to the Ideas, see also notes 15 (8) and 23 to chapter 3. For the affinity of ' natures ' and ' souls ', cp. Aristotle's Metaphysics, ioi5ai4 with the passages of the Laws quoted, and with 8g6d/e : ' the soul dwells in all things that move .'...
Compare further especially the following passages in which 'natures' and *souls* are used in a way that is obviously synonymous: Republic, 4853/b, 485e/486a and d, 486b (*nature'); 486b and d ('soul'); 4906/4913 (both), 49 1 b (both), and many other places (cp. also Adam's note to 37oa7). The affinity is directly stated in 49ob(io). For the affinity between 'nature' and *soul' and *race', cp. 5016 where the phrase 'philosophic natures' or 'souls' found in analogous passages is replaced by 'race of philosophers'.

There is also an affinity between 'soul' or 'nature' and the social class or caste; see for instance Republic, 435b. The connection between caste and race is fundamental, for from the beginning (4153), caste is identified with race.

24 Cp. the passages quoted in note 32 (i), (a) and (c), to chapter 4.

25 The Socratic doctrine of autarchy is mentioned in Republic, 387d/c (cp. Apology, 4 ic, ff., and Adam's note to Rep., 387d25). This is only one of the few scattered passages reminiscent of Socratic teaching; but it is in direct contradiction to the main doctrine of the Republic, as it is expounded in the text (see also note 36 to chapter 6, and text); this may be seen by contrasting the quoted passage with 369^ ff., and very many similar passages.

26 Cp. for instance the passage quoted in the text to note 29 to chapter 4. For the 'rare and uncommon natures', cp. Republic, ^gia/b, and many other
passages, for instance Timaeus, 516: 'reason is shared by the gods with very few men'. For the 'social habitat', see 49 id (cp. also chapter 23).
While Plato (and Aristotle; cp. esp. note 4 to chapter 11, and text) insisted that manual work is degrading, Socrates seems to have adopted a very different attitude. (Cp. Xenophon, Memorabilia, II, 7; 7-10; Xenophon's story is, to some extent, corroborated by Antisthenes* and Diogenes' attitude towards manual work; cp. also note 56 to chapter 10.)

27 See especially Theaetetus, i72b (cp. also Cornford's comments on this passage in Plato's Theory of Knowledge). Soo also note 7 to this chapter. The features of conventionalism in Plato's teaching may perhaps explain why the Republic was said, by some who still possessed Protagoras' writings, to resemble these. (Gp. Diogenes Laertius, III, 37.) For Lycophron's contract theory, see notes 43 to 54 to chapter 6 (esp. note 46) and text.

28 Cp. Laws, 6gob/c; see note 10 to this chapter. Plato mentions Pindar's naturalism also in Gorgias, 484^ 48Sb; Laws, 7i4c, Sgoa. For the opposition between 'external compulsion', on the one hand, and (a) '*free action*', (b) '*nature*', on the other, cp. also Republic, 6o3c and Timaeus, 64d. (Cp. also Rep., 466c-d, quoted in note 30 to this chapter.)

29 Cp. Republic, 36gb-c. This is part of the contract theory. The next quotation, which is the first statement of the naturalist principle in the perfect state, is 37oa/b-c. (Naturalism is in the Republic first mentioned by Glaucon in 3586, ff.; but this is, of course, not Plato's own doctrine of naturalism.

For the further development of the naturalistic principle of the division
of labour and the part played by this principle in Plato's theory of justice, cp. especially text to notes 6, 23 and 40 to chapter 6.

For a modern radical version of the naturalistic principle, see Marx's formula of the communist society: 'From each according to his ability: to each according to his needs!' (Cp. for instance A Handbook of Marxism, E. Burns, 1935; p. 752; and note 8 to chapter 13).
Sec also note 3 to chapter 13.

30 See note 23, and text. The quotations in the present paragraph are all from the Laws; (i) 889, a-d (cp. the very similar passage in the Theaetetus, 172b). (2) 8960-0; (3) 8906/891 a.

For the next paragraph in the text (i.e. for my contention that Plato's naturalism is incapable of solving practical problems) the following may serve as an illustration. Many naturalists have contended that men and women are 'by nature' different, both physically and spiritually, and that they should therefore fulfil different functions in social life. Plato, however, uses the same naturalistic argument to prove the opposite; for, he argues, are not dogs of both sexes useful for watching as well as hunting? 'Do you agree', he writes (Rep., 466c-d), 'that women . . . must participate with men in guarding as well as in hunting, as it is with dogs; . . . and that in so doing, they will be acting in the most desirable manner, since this will be not contrary to nature, but in accordance with the natural relations of the sexes?' (See also text to note 28 to this chapter; for the dog as ideal guardian, cp. chapter 4, especially note 32 (a), and text.)

31 For a brief criticism of the biological theory of the state, see note 7 to chapter 10, and text.
For some applications of Plato's political theory of the soul, and for the inferences drawn from it, see notes 58-9 to chapter 10, and text. For the fundamental methodological analogy between city and individual, cp. esp. 'Republic, 3686, 445^577c.

Cp. Republic, 423, b and d.

This Quotation as weir as the next is from G. Grote, Plato and the Other Companions of Socrates (1875), vol. Ill, 124. The main passages of the Republic are 439C, f. (the story of Leontius); 57 ic, f. (the bestial part versus the reason-

CHAPTER 5 /NOTES 35-39

ing part); 5880 (the Apocalyptic Monster; cp. the 'Beast' which possesses a Platonic Number, in the Revelation 13, 17 and 18); 6030! and 604!) (man at war with himself). See also Laws, 68ga-b, and notes 58-9 to chapter 10.

Cp. Republic, 5196, f. (cp. also note 10 to chapter 8); the next two quotations are both from the Laws, 903C. The first of these is a shorter version of Republic, 420! -42 ic; the second of Republic, 52ob, ff. Further passages on holism or collectivism are: Republic, 4242., 449e, 462^ Laws, 7i5b, 739C, 875a, f., 903bj 9230, 942a, f. (See also notes 31/32 to chapter 6.) For the remark in this paragraph that Plato spoke of the state as an organism, cp. Republic, 4620, and Laws, 9646, where the state is even compared with the human body.

Cp. Adam in his edition of the Republic, vol. II, 303; see also note 3 to chapter 4, and text.

This point is emphasized by Adam, op. cit., note
546a, b7 and pp. 288 and 307. The next quotation in this paragraph is Republic, 546a; cp. Republic, 485a/b quoted in note 26 (i) to chapter 3 and in text to note 33 to chapter 8.

38 This is the main point in which I must deviate from Adam's interpretation. I believe Plato to indicate that the philosopher king of Books VI VII, whose main interest is in the things that are not generated and do not decay (Rep., 4-85b; see the last note and the passages there referred to), obtains with his mathematical and dialectical training the knowledge of the Platonic Number and with it the means of arresting social degeneration and thereby the decay of the state. See especially the text to note 39.

The quotations that follow in this paragraph are: * keeping pure the race of the guardians *; cp. Republic, 460c, and text to note 34 to chapter 4.
* A city thus constituted, etc.: 546a.

The reference to Plato's distinction, in the field of mathematics, acoustics, and astronomy, between rational knowledge and delusive opinion based upon experience or perception is to Republic, 523a, ff., 525d, ff., 527d, ff., 531a, ff. (down to 5343 and 537d); see also 509d-511e.

39 In my interpretation of the Story of the Fall and the Number, I have carefully avoided the difficult, undecided, and perhaps undecidable problem of the computation of the Number itself. (It may be undecidable since Plato may not have revealed his secret in full.) I confine my interpretation entirely to the passages immediately before and after the one that describes the Number itself; these passages are, I believe, clear enough. In spite of that, my interpretation deviates, as far as I know,
from previous attempts.

(i) The crucial statement on which I base my interpretation is (A) that the guardians work by 'calculation aided by perception'. Next to this, I am using the statements (B) that they will not *accidentally hit upon (the correct way of) obtaining good offspring'; (C) that they will 'blunder, and beget children in the wrong way'; (D) that they are 'ignorant' of such matters (as the Number).

Regarding (4), it should be clear to every careful reader of Plato that such a reference to perception is intended to express a criticism of the method in question. This view of the passage under consideration (546a, f.) is supported by the fact that it comes so soon after the passages 523a~537d (see the end of the last note), in which the opposition between pure rational knowledge and opinion based on perception is one of the main themes, and in which, more especially, the term 'perception' (see also 5iic/d) is given a definite technical and deprecatory sense. (Cp. also, for instance, Plutarch's wording in his discussion of this opposition: in his Life of Marcellus, 306.) I am therefore of the opinion, and this opinion is enforced by the context, especially by (B), (C), (D), that Plato's remark (A) implies (a) that *calculation based upon perception' is a poor method, and (b) that there are better methods, namely the methods of mathematics and dialectics, which yield pure rational knowledge; and this opinion is strengthened by the context,
not have emphasized it so much if it were not for the fact that even Adam has missed it. In his note to 5463, by, he interprets 'calculation' as a reference to the rulers' task of determining the number of marriages they should permit, and 'perception' as the means by which they *decide* what couples should be joined, what children be reared, etc.' That is to say, Adam takes Plato's remark to be a simple description and not as a polemic against the weakness of the empirical method. Accordingly, he relates neither the statement (C) that the rulers will *blunder* 'nor the remark (D) that they are 'ignorant' to the fact that they use empirical methods. (The remark (B) that they will not 'hit' upon the right method 'by accident', would simply be left untranslated, if we follow Adam's suggestion.)

In interpreting our passage we must keep it in mind that in Book VIII, immediately before the passage in question, Plato returns to the question of the first city of Books 'II to IV. (See Adam's notes to 4493, ff. and 543a, ff.) But the guardians of this city are neither mathematicians nor dialecticians. Thus they have no idea of the purely rational methods emphasized so much in Book VII, 525-534. In this connection, the import of the remarks on perception, i.e. on the poverty of empirical methods, and on the resulting ignorance of the guardians, is unmistakable.

The statement (B) that the rulers will not 'hit accidentally upon' (the correct way of) 'obtaining good offspring, or none at all', is perfectly clear in my interpretation. Since the rulers have merely empirical methods at their disposal, it would be only a lucky accident if they did hit upon a method whose determination needs mathematical or other rational methods. Adam suggests (note to 546a, by) the translation: 'none
the more will they by calcula-
tion together with perception obtain good offspring '; and only in brackets,
he adds : * lit. hit the obtaining of. I think that his failure to make any
sense of the ' hit ' is a consequence of his failure to see the implications of (A).

The interpretation here suggested makes (C) and (D) perfectly under-
standable; and Plato's remark that his Number is c master over better or
worse birth ', fits in perfectly. It may be remarked that Adam does not
comment on (D), i.e. the ignorance, although such a comment would be
most necessary in view of his theory (note to 54.66.22) that * the number is
not a nuptial .. number ', and that it has no technical eugenic meaning.

That the meaning of the Number is indeed technical and eugenic is, I
think, clear, if we consider that the passage containing the Number is enclosed
in passages containing references to eugenic knowledge, or rather, lack of
eugenic knowledge. Immediately before the Number, (A), (B), (C), occur,
and immediately afterwards, (//), as well as the story of the bride and bride-
groom and their degenerate offspring. Besides, (C) before the Number and
(D) after the Number refer to each other; for (C), the ' blunder ', is connected
with a reference to c begetting in the wrong manner ', and (Z>), the ( ignorance ',
is connected with an exactly analogous reference, viz.,
' uniting bride and bridegroom in the wrong way '. (See also next note.)

The last point in which I must defend my interpretation is my contention
that those who know the Number thereby obtain the power to influence ' better
or worse birth '. This does not of course follow from Plato's statement that
the Number itself has such power; for if Adam's interpretation is right, then
the Number regulates the births because it determines an unalterable period after which degeneration is bound to set in. But I maintain that Plato's references to 'perception', to 'blunder' and to 'ignorance' as the immediate cause of the eugenic mistakes would be pointless if he did not mean that with the knowledge of appropriate mathematical and purely rational methods, the guardians would not have blundered. But this makes inevitable the inference that the Number has a technical eugenic meaning, and that its knowledge gives power to arrest degeneration. (This inference also seems to me the only one compatible with all we know about this type of superstition; all astrology, for instance, includes the apparently somewhat contradictory conception that the knowledge of our fate may help us to unfluence this fate.) I think that the attempts to explain the Number as anything but a secret breeding taboo arise from the reluctance to credit Plato with such crude ideas, even though he clearly expresses them. In other words, they arise from the tendency to idealize Plato.

(2) In this connection, I must refer to an article by A. E. Taylor, 'The Decline and Fall of The State in Republic, VIII' (Mind, N.S. 48, 1939, pp. 23 ff.). In this article, Taylor attacks Adam (in my opinion not justly), and maintains against him: 'It is true, of course, that the decay of the ideal State is expressly said in 546b to begin when the ruling class "beget children out of due season"... But this need not mean, and in my opinion does not mean, that Plato is concerning himself here with problems of the hygiene
of reproduction. The main thought is the simple one that if, like everything of man's making, the State carries the seeds of its own dissolution within it, this must, of course, mean that sooner or later the persons wielding supreme power will be inferior to those who preceded them '(pp. 25 f.). Now this interpretation seems to me not only untenable, in view of Plato's fairly definite statements, but also a typical example of the attempt to eliminate from Plato's writing such embarrassing elements as racialism or superstition. Adam began by denying that the Number has technical eugenic importance, and by maintaining that it is not a 'nuptial number', but merely a cosmological period. Taylor now continues by denying that Plato is here at all interested in 'problems of the hygiene of the reproduction'. But Plato's passage is thronged with allusions to these problems, and Taylor himself admits two pages before (p. 23) that it is 'nowhere suggested' that the Number 'is a determinant of anything but the "better and worse births"'. Besides, not only the passage in question but the whole Republic is simply full of emphasis upon the 'problems of the hygiene of reproduction'. Taylor's theory that Plato, when speaking of the *human creature* (or, as Taylor puts it, of a 'thing of human generation'), means the state, and that Plato wishes to allude to the fact that the state is the creation of a human lawgiver, seems to me without support in Plato's text. The whole passage begins with a reference to the things of the sensible world in flux, to the things that are generated and that decay (see notes 37 and 38 to this chapter), and more especially, to living things, plants as well as animals, and to their racial problems. Besides, a thing 'of man's making' would, if emphasized by Plato in such a context, mean an 'artificial' thing which is inferior because
it is 'twice removed' from reality. (Cp. text to notes 20-23 to this chapter, and the whole Tenth Book of the Republic down to the end of 608b.) Plato would never expect anybody to interpret the phrase 'a thing of man's making' as meaning the perfect, the *natural* state; rather he would expect them to think of something very inferior (like poetry; cp. note 39 to chapter 4). The phrase which Taylor translates 'thing of human generation' is usually simply translated by *human creature*, and this removes all difficulties.

(3) Assuming that my interpretation of the passage in question is correct, a suggestion may be made with the intention of connecting Plato's belief in the significance of racial degeneration with his repeated advice that the number of the members of the ruling class should be kept constant (advice that shows that the sociologist Plato understood the unsettling effect of population increase). Plato's way of thinking, described at the end of the present chapter (cp. text to note 45; and note 37 to chapter 8), especially the way he opposes The One monarch, The Few timocrats, to The Many who are nothing but a mob, may have suggested to him the belief that an increase in numbers is equivalent to a decline in quality. If this hypothesis is correct, then he may easily have concluded that population increase is interdependent with, or perhaps even caused by, racial degeneration. Since population increase was in fact the main cause of the instability and dissolution of the early Greek tribal societies (cp. notes 6, 7, and 63 to chapter 10, and text), this hypothesis would explain
why Plato believed that the 'real' cause was racial degeneration (in keeping with his general theories of *nature*, and of *change*).

40 Adam insists (note to 546ds2) that we must not translate *at the wrong time* but 'inopportune'. I may remark that my interpretation is quite independent of this question; it is fully compatible with 'inopportune' or 'wrongly' or *in the wrong way*. (The phrase in question means, originally, something like 'contraiy to the proper measure'; usually it means 'at the wrong time'.)

41 For Plato's law of social revolutions, see esp. note 26 to chapter 4, and text.

42 The term meta-biology is used by G. B. Shaw in this sense, i.e. as denoting a kind of religion. (Cp. the preface to Back to Methuselah; see also note 66 to chapter 12.)

43 Cp. Adam's note to Republic, 547a 3.

44 For a criticism of what I call 'psychologism' in the method of sociology, cp. text to note 19 to chapter 13 and chapter 14, where Mill's still popular methodological psychologism is discussed.

45 It has often been said that Plato's thought must not be squeezed into a 'system'; accordingly, my attempts in this paragraph (and not only in this paragraph) to show the systematic unity of Plato's thought, which is obviously based on the Pythagorean table of opposites, will probably arouse criticism. But I believe that such a systematization is a necessary test of any interpretation. Those who believe that they do not need an interpretation, and that they can *know* a philosopher or his work, and take him just 'as
he was *, or his work just ' as it was ', are mistaken. They cannot but interpret both the man and his work; but since they are not aware of the fact that they interpret (that their view is coloured by tradition, temperament, etc.), their interpretation must necessarily be naive and uncritical. (Cp. also chapter 10 (notes i to 5 and 56), and chapter 25.) A critical interpretation, however, must take the form of a rational reconstruction, and must be systematic; it must try to reconstruct the philosopher's thought as a consistent edifice. Cp. also what A. C. Ewing says of Kant (A Short Commentary on Kant's Critique of Pure Reason, 1938, p. 4): ' . . . we ought to start with the assumption that a great philosopher is not likely to be always contradicting himself, and consequently, wherever there are two interpretations, one of which will make Kant consistent and the other inconsistent, prefer the former to the latter, if reasonably possible.* This surely applies also to Plato, and even to interpretation in general.

NOTES TO CHAPTER 6

1 Cp. note 3 to chapter 4 and text, especially the end of that paragraph. Furthermore, note 2 (2) to that chapter. Concerning the formula Back to Nature, I wish to draw attention to the fact that Rousseau was greatly influenced by Plato. Indeed, a glance at the Social Contract will reveal a wealth of analogies especially with those Platonic passages on naturalism which have been commented upon in the last chapter. Cp. especially note 14 to chapter 9. There is also an interesting similarity between Republic, 591 a, ff. (and Gorgias, 472e, ff., where a similar idea occurs in an individualist context) and Rousseau's (and Hegel's) famous theory of punishment.
Political Theory, I, 388 ff., rightly emphasizes Plato's influence upon Rousseau. But he does not see the strong element of romanticism in Plato; and it is not generally appreciated that the rural romanticism which influenced both France and Shakespeare's England through the medium of Sanazzaro's Arcadia, has its origin in Plato's Dorian shepherds; cp. notes 11 (3), 26, and 32 to chapter 4, and note 14 to chapter 9.)

2 Cp. R. H. S. Grossman, Plato To-Day (1937), 132; the next quotation is from p. in. This interesting book (like the works of Grote and T. Gomperz) has greatly encouraged me to develop my rather unorthodox views on Plato, and to follow them up to their rather unpleasant conclusions. For the quotations from G. E. M. Joad, cp. his Guide to the Philosophy of Morals and Politics (1938), 661, and 660. I may also refer here to the very interesting remarks on Plato's views on justice by G. L. Stevenson, in his article 'Persuasive Definitions' (Mind, N.S., vol. 47, 1938, pp. 331 ff.)

8 Cp. Grossman, op. cit., 132 f. The next two quotations are: Field, Plato, etc., 91; cp. similar remarks in Barker, Greek Political Theory, etc. (see note 13 to chapter 5).

The idealization of Plato has played a considerable part in the debates on the genuineness of the various works transmitted under his name. Many of them have been rejected by some of the critics simply because they contained passages which did not fit in with an idealized view of Plato. A rather naive as well as typical expression of this attitude can be
found in Davies' and Vaughan's *Introductory Notice* (cp. the Golden Treasury edition of the Republic, p. vi): 'Mr. Grote, in his zeal to take Plato down from his superhuman pedestal, may be somewhat too ready to attribute to him the compositions which have been judged unworthy of so divine a philosopher.' It does not seem to occur to the writers that their judgement on Plato should depend on what he wrote, and not vice versa; and that if these compositions are genuine as well as unworthy, then Plato was simply not quite so divine a philosopher as they assume.

4 The formulation of (a) emulates one of Kant's who describes a just constitution as 'a constitution that achieves the greatest possible freedom of human individuals by framing the laws in such a way that the freedom of each can co-exist with that of all others'. (Critique of Pure Reason a, 373); see also his Theory of Right, where he says: *Right (or justice) is the sum total of the conditions which are necessary for everybody's free choice to co-exist with that of everybody else, in accordance with a general law of liberty.* Kant believed that this was the aim pursued by Plato in the Republic; from which we may see that Kant was one of the many philosophers who were either deceived by Plato or who idealized him by imputing to him their own humanitarian ideas. I may remark, in this connection, that Kant's ardent liberalism is very little appreciated in English and American writings on political philosophy (in spite of Hastie's Kant's Principles of Politics). He is only too often regarded as a forerunner of Hegel, in spite of the fact that he recognized in the romanticism of both Herder and Fichte a doctrine diametrically opposed to his own; he would have strongly resented the claim of the Hegelian school
that he was a forerunner of Hegel. But the tremendous influence of Hegelianism led to a wide acceptance of this view which is, I believe, completely mistaken.

8 Cp. text to notes 32/33 to chapter 5.

Cp. text to notes 25 to 29, chapter 5. The quotations in the present paragraph are: (i) Republic, 4333; (2) Republic, 434a/b; (3) Republic, 44 id.

For Plato's statement, in the first quotation, 'we have repeated over and again *', cp. also esp. Republic, 397e, where the theory of justice is carefully prepared, and, of course, Republic, 369b-c, quoted in text to note 29, chapter 5.

See also notes 23 and 40 to the present chapter.

CHAPTER 6/NOTES 7-14 217

7 As pointed out in chapter 4 (note 18 and text, and note 29), Plato does not say much about slaves in the Republic, although what he says is significant enough; but he dispels all doubts about his attitude in the Laws (cp. especially G. R. Morrow's article in Mind, referred to in note 29 to chapter 4).

8 The quotations are from Barker, Greek Political Theory, I, p. 180. Barker states (p. 176 f.) that *Platonic Justice* 'is *social justice*', and correctly emphasizes its holistic nature. He mentions (178 f,) the possible criticism that this formula does 'not . . touch the essence of what men generally mean by justice *', i.e. 'a principle for dealing with the clash of wills *', i.e. justice as pertaining to individuals. But he thinks that *such an objection is beside the point *', and that Plato's idea is 'not a matter of law *' but *a conception of social morality *' (i 79); and he goes on to assert that this treatment of justice
corresponded, in a way, to the current Greek ideas of justice: " Nor was Plato, in conceiving justice in this sense, very far removed from the current ideas in Greece '. He does not even mention that there exists some evidence to the contrary.

9 For Aristotle's theory of slavery, see note 3 to chapter 11 and text. The quotations from Aristotle in this paragraph are: (i) and (2) Nicom. Ethics, V, 4, 7, and 8 ; (3) Politics, III, 12, i (i282b ; see also note 30 to this chapter. The passage contains a reference to the Nicom. Eth.); (4) Nicom. Ethics, V, 4, 9. (5) Politics, IV (VI), 2, r (i3i7b). In the Nicom. Ethics, V, 3, 7 (cp. also Pol. , Ill, 9, i ; I28oa), Aristotle also mentions that the meaning of 'justice ' varies in democratic, oligarchic, and aristocratic states, according to their different ideas of 'merit '.

10 The well-known representation of Themis as blindfolded, i.e., disregarding the suppliant's station, and as carrying scales, i.e., as distributing equality or as balancing the claims and interests of the contesting individuals, is a symbolic representation of the equalitarian idea of justice. This representation cannot, however, be used here as an argument; for, as Dr. E. Gombrich kindly informs me, it dates from the Renaissance, going back to a passage in Plutarch's De hide and Osiride, but not to classical Greece.

11 Republic, 44oc-d. The passage concludes with a characteristic sheep-dog metaphor: * Or else, until he has been called back, and calmed down, by the voice of his own reason, like a dog by his shepherd ? ' Gp. note 32 (2) to chapter 4.

12 Plato, in fact, implies this when he twice presents
Socrates as rather doubtful where he should now look out for justice. (Cp. 368b, ff., 432b, ff.)

13 Adam (under the influence of Plato) obviously overlooks the equalitarian theory in his note to Republic, 33 1e, ff., where he, probably correctly, says that ' the view that Justice consists in doing good to friends and harm to enemies, is a faithful reflection of prevalent Greek morality '. But he is wrong when he adds that this was ' an all but universal view '; for he forgets his own evidence (note to 561628), which shows that equality before the laws (' isdnomy ') " was the proud claim of democracy ".

14 A passing reference to equality (similar to that in the Gorgias, 483c/d ; see also this note, below, and note 47 to this chapter) is made in Glaucn's speech in Republic, 359C ; but the issue is not taken up. (For this passage cp. note 50 to this chapter.)

In Plato's abusive attack upon democracy (see text to notes 14-18, chapter 4), three scornful jocular references to equalitarianism occur. The first is a remark to the effect that democracy * distributes equality to equals and to unequajns alike ' (558c ; cp. Adam's note to 558ci6 ; see also note 21 to this chapter) ; this is intended as an ironical criticism. (Equality has been connected with democracy before, viz. in the description of the democratic revolution ; cp. Rep., 557a, quoted in the text to note 13, chapter 4.) The

218 CHAPTER 6/NOTES 15-19

second characterizes the ' democratic man ' as gratifying all his desires ' equally ', whether they may be good or bad ; he is therefore
called an ' equalitarianist *
(' isonomist '), a punning allusion to the idea of
equal laws for all } or ' equality
before the law ' (' Isonomy '; cp. note 17 to this
chapter). This pun occurs
in Republic, 5616. The way for it is well paved, since
the word * equal ' has
already been used three times (Rep., 56 ib and c) to
c characterize an attitude
of the man to whom all desires and whims are * equal '.
The third of these
cheap cracks is an appeal to the reader's imagination,
typical even nowadays
of this kind of propaganda : ' I nearly forgot to
mention the great rôle played
by these famous " equal laws ", and by this famous " liberty ", in the inter-
relations between men and women . .' Rep., 563^)

Besides the evidence of the importance of
equalitarianism mentioned
here (and in the text to notes 9 to 10 to this
chapter), we must consider
especially Plato's own testimony in (i) the Gorgias,
where he writes (4886/4893 ;
see also notes 47, 48, and 50 to the present chapter) :
' Does not the multitude
(i.e. here : the majority of the people) believe . .
that justice is equality ? *
(2) The Menexenus (238e-239a ; see note 19 to this
chapter, and text). The
passages in the Laws on equality are later than the
Republic, and cannot be
used as testimony for Plato's awareness of the issue
when writing the Republic ;
but see text to notes 20 and 21 to this chapter.

16 Plato himself says, in connection with the third
remark (^6^b ; cp. the
last note) : ' Shall we utter whatever rises to our
lips ? ; by which he appar-
ently wishes to indicate that he does not see any
reason to suppress the
joke.

18 I believe that Thucydides' (II, 37 ff.) version of
Pericles' oration can
be taken as practically authentic. In all likelihood,
he was present when
Pericles spoke; and in any case he would have reconstructed it as faithfully as possible. There is much reason to believe that in those times it was not extraordinary for a man to learn another's oration even by heart (cp. Plato's Phaedrus), and a faithful reconstruction of a speech of this kind is indeed not as difficult as one might think. Plato knew the oration, taking either Thucydides' version or another source, which must have been extremely similar to it, as authentic. Cp. also note 31 and 34/35 to chapter 10. (It may be mentioned here that early in his career, Pericles had made rather dubious concessions to the popular tribal instincts and to the equally popular group egoism of the people; I have in mind the legislation concerning citizenship in 451 B.C. But later he revised his attitude towards these matters, probably under the influence of such men as Protagoras.)

17 Cp. Herodotus, III, 80, and especially the eulogy on *isonomy*, i.e., equality before the law (III, 80, 6); see also note 14 to this chapter. The passage from Herodotus, which influenced Plato in other ways also (cp. note 24 to chapter 4), is one which Plato ridicules in the Republic just as he ridicules Pericles' oration; rp. note 14 to chapter 4 and 34 to chapter 10.

18 Even the naturalist Aristotle does not always refer to this naturalistic version of equalitarianism; for instance, his formulation of the principles of democracy in Politics, i^ijb (cp. note 9 to this chapter, and text) is quite independent of it. But it is perhaps even more interesting that in the Gorgias in which the opposition of nature and convention plays such an important role, Plato presents equalitarianism without burdening it with the dubious theory of the natural equality of all men (see 4886
/48ga, quoted in note 14 to
this chapter, and 483d, 4843, and 5083).

19 Cp. Menexenus, 238e/23ga. The passage immediately follows a clear
allusion to Pericles' oration (viz., to the second
sentence quoted in the text to
note 17, in this chapter). It seems not improbable that
the reiteration of the
term 'equal birth' in that passage is meant as a
scornful allusion to the 'low *
birth of Pericles' and Aspasia's sons, who were
recognized as Athenian citizens

CHAPTER 6/NOTE 20 2ig

only by special legislation in 429 B.C. (Cp. E. Meyer,
Gesch. d. Altertums,
vol. IV, p. 14, note to No. 392, and p. 323, No. 558.)

(It has been held (even by Grote; cp. his Plato, III,
p. 1 l) that Plato in
the Menexenus, 'in his own rhetorical discourse, . .
drops the ironical vein','
i.e. that the middle part of the Menexenus, from which
the quotation in the
text is taken, is not meant ironically. But in view of
the quoted passage
on equality, and in view of Plato's open scorn in the
Republic when he deals
with this point (cp. note 14 to this chapter), this
opinion seems to me untenable.
And it appears to me equally impossible to doubt the
ironical character of
the passage immediately preceding the one quoted in the
text where Plato
says of Athens (cp. 238c/d): 'In this time as well as
at present . . our govern-
ment was always an aristocracy . . ; though it is
sometimes called a democracy,
it is really an aristocracy, that is to say, a rule of
the best, with the approval
of the many . .' In view of Plato's hatred of
democracy, this description
needs no further comment. For the genuineness of the
Menexenus, cp. also
note 35 to chapter 10.
20 Laws, 757a ; cp. the whole passage 7573-0.

(1) For what I call the standard objection against equalitarianism, cp. also Laws, 744b, ff. 'It would be excellent if everybody could . . have all things equal; but since this is impossible . .', etc. The passage is especially interesting in view of the fact that Plato is often described as an enemy of plutocracy by many writers who judge him only by the Republic. But in this important passage of the Laws (i.e. 744b, ff.) Plato demands that political offices, and contributions, as well as distributions of bounties, should be proportional to the value of a citizen's wealth. And they should depend not only on his virtue or that of his ancestors or on the size and attractiveness of his body, but also upon his wealth or his poverty. In this way, a man will receive honours and offices as equitably as possible, i.e. in proportion to his wealth, although according to a principle of unequal distribution.' The basic idea of this attitude, viz., that it is unjust to treat unequals equally, can be found, in a passing remark, as early as the Protagoras (337a); but Plato did not make much use of the idea before writing the Laws.

(2) For Aristotle's elaboration of these ideas, cp. esp. his Politics, III, 9, i, i28oa (see also III, 12-13, 12820-1284\^, where he writes: * All men cling to justice of some kind, but their conceptions are imperfect, and do not embrace the whole Idea. For example, justice is thought (by democrats) to be equality; and so it is, although it is not equality for all, but only for equals. And justice is thought (by oligarchs) to be inequality; and so it is, although it is not inequality for all, but only for unequals.'

(3) Against all this anti-equalitarianism, I maintain, with Kant, that it
must be the principle of all morality that no man should consider himself more valuable than any other person. And I maintain that this principle is the only one acceptable, considering the notorious impossibility of judging oneself impartially. I am therefore at a loss to understand the following remark of an excellent writer like Gatlin (Principles, 314): *There is something profoundly immoral in the morality of Kant which endeavours to roll all personalities level . . and which ignores the Aristotelian precept to render equals to equals and unequals to unequals. One man has not socially the same rights as another . . The present writer would by no means be prepared to deny that . . there is something in "blood."* Now I ask: If there were something in *blood*, or in inequality of talents, etc.; and even if it were worth while to waste one's time in assessing these differences; and even if one could assess them; why, then, should they be made the ground of greater rights and not only of heavier duties? (Cp. text to notes 31/32 to chapter 4.) I fail to see the profound immorality of Kant's equalitarianism. And I fail to see on what Catlin bases his moral judgement, since he considers

220 CHAPTER 6/NOTES 21-25

morals to be a matter of taste. Why should Kant's *taste* be profoundly immoral? (It is also the Christian 'taste'.) The only reply to this question that I can think of is that Catlin judges from his positivistic point of view (cp. note 18 (2) to chapter 5), and that he thinks the Christian and Kantian demand immoral because it contradicts the positively enforced moral valuations of our contemporary society.
One of the best answers ever given to all these anti-equalitarianists is due to Rousseau. I say this in spite of my opinion that his romanticism (cp. note i to this chapter) was one of the most pernicious influences in the history of social philosophy. But he was also one of the few really brilliant writers in this field. I quote one of his excellent remarks from the Origin of Inequality (see, for instance, the Everyman Edition of the Social Contract) p. 174; the italics are mine); and I wish to draw the reader's attention to the dignified formulation of the last sentence of this passage. * I conceive that there are two kinds of inequality among the human species; one, which I call natural or physical because it is established by nature, and consists in a difference of age, health, bodily strength, and the qualities of the mind or of the soul; and another, which may be called moral or political inequality, because it depends on a kind of convention, and is established, or at least authorized, by the consent of men. This latter consists of the different privileges, which some men enjoy... such as that of being more rich, more honoured, or more powerful... It is useless to ask what is the source of natural inequality, because that question is answered by the simple definition of the word. Again, it is still more useless to inquire whether there is any essential connection between the two inequalities; for this would be only asking, in other words, whether those who command are necessarily better than those who obey, and whether strength of body or of mind, or wisdom, or virtue, are always found... in proportion to the power or wealth of a man; a question fit perhaps to be discussed by slaves in the hearing of their masters, but highly unbecoming to reasonable and free men in search of the truth. 9

21 Republic, 558c; cp. note 14 to this chapter (the
first passage in the attack on democracy).

22 Republic, 433b. Adam who also recognizes that the passage is intended as an argument tries to reconstruct the argument (note to 433611) ; but he confesses that ' Plato seldom leaves so much to be mentally supplied in his reasoning '.

28 Republic, 4336/4343. For a continuation of the passage, cp. text to note 40 to this chapter ; for the preparation for it in earlier parts of the Republic, see note 6 to this chapter. Adam comments on the passage which I call the ' second argument * as follows (note to 433635) : * Plato is looking for a point of contact between his own view of Justice and the popular judicial meaning of the word . .' (See the passage quoted in the next paragraph in the text.) Adam tries to defend Plato's argument against a critic (Krohn) who saw, though not very clearly, that there was something wrong with it.

24 The quotations in this paragraph are from Republic, 430d, ff.

25 This device seems to have been successful even with a keen critic such as Gomperz, who, in his brief criticism (Greek Thinkers, RookV, II, 10 ; Germ.ed., vol. II, pp. 378/379), fails to mention the weaknesses of the argument ; and he even says, commenting upon the first two books (V, II, 5 ; p. 368) : ' An exposition follows which might be described as a miracle of clarity, precision, and genuine scientific character . .', adding that Plato's interlocutors Glaucon and Adeimantus, * driven by their burning enthusiasm . . dismiss and forestall all superficial solutions '.

For my remarks on temperance, in the next paragraph of
the text, see
the following passage from Davies' and Vaughan's *Analysis' (cp. the Golden

CHAPTER 6/NOTES 26-33 221

Treasury edition of the Republic, p. xviii; italics mine) : * The essence of
temperance is restraint. The essence of political
temperance lies in recognizing
the right of the governing body to the allegiance and
obedience of the governed. 9 This
may show that my interpretation of Plato's idea of
temperance is shared
(though expressed in a different terminology) by
followers of Plato. I may
add that * temperance ', i.e. being satisfied with
one's place, is a virtue in
which all three classes share, although it is the only
virtue in which the workers
may participate. Thus the virtue attainable by the
workers or money-earners
is temperance ; the virtues attainable by the
auxiliaries are temperance and
courage ; by the guardians, temperance, courage, and
wisdom.

The * lengthy preface ', also quoted in the next
paragraph, is from Republic,
432b, ff.

26 On the term ' collectivism ', a terminological
comment may be made
here. What H. G. Wells calls * collectivism ' has
nothing to do with what
I call by that name. Wells is an individualist (in my
sense of the word),
as is shown especially by his Rights of Man and his
Common Sense of War and
Peace, which contain very acceptable formulations of
the demands of an
equalitarian individualism. But he also believes,
rightly, in the rational
planning of political institutions, with the aim of
furthering the freedom and
the welfare of individual human beings. This he calls ' collectivism ' ; to
describe what I believe to be the same thing as his *collectivism*, I should use an expression like 'rational institutional planning for freedom'. This expression may be long and clumsy, but it avoids the danger that 'collectivism' may be interpreted in the anti-individualistic sense in which it is often used, not only in the present book.

27 Laws, 903c; cp. text to note 35, chapter 5.

28 There are innumerable places in the Republic and in the Laws where Plato gives a warning against unbridled group egoism; cp., for instance, Republic, 5196, and the passages referred to in note 41 to this chapter.

Regarding the identity often alleged to exist between collectivism and altruism, I may refer, in this connection, to the very pertinent question of Sherrington, who asks in Man On His Nature (p. 388): *Has the shoal and the herd altruism?*

29 For Dickens' mistaken contempt of Parliament, cp. also note 23 to chapter 7.

30 Aristotle's Politics, III, 12, i (1282b); cp. text to note 9, to this chapter. (Gp. also Aristotle's remark in Pol., Ill, 9, 3, 180a, to the effect that justice pertains to persons as well as to things.) With the quotation from Pericles later in this paragraph, cp. text to note 16 to this chapter, and to note 31 to chapter 10.

31 This remark is from a passage (Rep., 5196, f.) quoted in the text to note 35 to chapter 5.

32 The important passages from the Laws quoted (i) in the present and (2) in the next paragraph are:
(1) Laws, 739C, ff. Plato refers here to the Republic, and apparently especially to Republic, 4623, ff., 4243, and 4496. (A list of passages on collectivism and holism can be found in note 35 to chapter 5.)

(2) Laws, 942a, f. Both these passages are referred to as anti-individualistic by Gomperz (op. cit., vol. II, 406).

33 Cp. note 42, chapter 4, and text. The quotation which follows in the present paragraph is Laws 9423, f. (see the last note).

It is interesting that Barker, who hates militarism, believes that Plato held similar views. (Greek Political Theory, 298-301). It is true that Plato did not eulogize war, and that he even spoke against war. But many militarists have talked peace and practised war; and Plato's state is ruled by the military caste.

222 CHAPTER 6/NOTES 34-45

84 Strictest legislation about meals and also about drinking habits plays a considerable part in Plato; cp., for instance, Republic, 416e, 458c; Laws, 6256, 762b, 780-783, 806c. Plato always emphasizes the importance of common meals, in accordance with Cretan and Spartan customs. Interesting also is the preoccupation of Plato's uncle Critias with these matters. (Cp. Diels 2, Critias, fr. 33.)

36 Cp. E. B. England's edition of the Laws, vol. I, p. 514, note to 73gb8 ff. The quotations from Barker, op. cit., are: pp. 149 and 148. Countless similar passages can be found in the writings of most Platonists. See however Sherrington's remark (cp. note 28 to this chapter) that
it is hardly correct
to say that a shoal or a herd is inspired by altruism. 
Herd instinct and tribal 
egoism, and the appeal to these instincts, should not 
be mixed up with 
unselfishness.

86 Cp. Republic, 424a, 44gc ; Laws, 73pc. (Cp. also 
Lysis, 207c.)
Regarding the individualistic theory of justice and 
injustice of the Gorgias,

cp. for instance the examples given in the Gorgias, 
468b, ff. 508d/e. These 
passages probably still show Socratic influence (cp. 
note 56 to chapter 10).
Socrates* individualism is most clearly expressed in 
his famous doctrine of the 
self-sufficiency of the good man; a doctrine which is 
mentioned by Plato in 
the Republic (387d/e) in spite of the fact that it 
flatly contradicts one of the 
main theses of the Republic, viz., that the state alone 
can be self-sufficient.
(Cp. note 25, and the text to this and to the following 
notes, to chapter

50

87 Republic, 368b/c. ~

38 Cp. especially Republic, 344a, ff.

40 Republic, 434a-c. (Cp. also text to note 6 and note 
23 to this chapter, 
and notes 27 (3) and 31 to chapter 4.)

41 Republic, 466b/c. Cp. also the Laws, ji$b/c, and 
many other passages 
against the anti-holistic misuse of class prerogatives. 
See also note 28 to this 
chapter, and note 25 (4) to chapter 7.

42 For the problem of state control in education, cp. 
note 13 to chapter 7.

Burke, French Revolution (ed. 1815; vol. V, 184; the passage is aptly quoted by Jowett in his notes to the passage of Aristotle's; see his edition of Aristotle's Politics, vol. II, 126).

The quotation from Aristotle later in the paragraph is op. cit., Ill, 9, 8, (128ob).

Field, for instance, proffers a similar criticism (in his Plato and His Contemporaries, 117): *There is no question of the city and its laws exercising any educative effect on the moral character of its citizen.' However, Green has clearly shown (in his Lectures on Political Obligation) that it is impossible for the state to enforce morality by law. He would certainly have agreed with the formula: *We want to moralize politics, and not to politicize morals.' (See end of this paragraph in the text.) Green's view is foreshadowed by Spinoza (Tract. Theol. Pol., chapter 20): *He who seeks to regulate everything by law is more likely to encourage vice than to smother it.'

44 I consider the analogy between civil peace and international peace, and between ordinary crime and international crime, as fundamental for any attempt to get international crime under control. For this analogy and its limitations as well as for the poverty of the historicist method in such problems, cp. note 7 to chapter 9.

45 The quotation is from Aristotle's Politics, III, 9, 8, (1280).

(i) I say in the text 'furthermore' because I believe that the passages alluded to in the text, i.e. Politics, III, 9, 6, and III, 9, 12, are likely to represent Lycophron's views also. My reasons for believing this are the
following. From III, 9, 6, to III, 9, 12, Aristotle is engaged in a criticism of the doctrine I have called protectionism. In III, 9, 8, quoted in the text, he directly attributes to Lycophron a concise and perfectly clear formulation of this doctrine. From Aristotle's other references to Lycophron (see (2) in this note), it is probable that Lycophron's age was such that he must have been, if not the first, at least one of the first to formulate protectionism. Thus it seems reasonable to assume (although it is anything but certain) that the whole attack upon protectionism, i.e. Ill, 9, 6, to III, 9, 12, is directed against Lycophron, and that the various but indeed fully equivalent formulations are all his.

Aristotle's objections are all intended to show that the protectionist theory is unable to account for the local as well as the internal unity of the state. It overlooks, he holds (III, 9, 6), the fact that the state exists for the sake of the good life in which neither slaves nor beasts can have a share (i.e. for the good life of the virtuous landed proprietor, for everybody who earns money is by his * banausic* occupation prevented from citizenship). It also overlooks the tribal unity of the * true * state which is (III, 9, 12) 'a community of well-being in families, and an aggregation of "families, for the sake of a complete and self-sufficient life . . established among men who live in the same place, and who intermarry .'.

(2) For Lycophron's equalitarianism, see note 13 to chapter 5. Jowett (in Aristotle *j Politics, II, 126) describes Lycophron as " an obscure rhetorician "; but Aristotle must have thought otherwise, since in his
extant writings he
mentions Lycophron at least six times. (In Pol., Rhet.,
Fragm., Atetaph.,
Phyr., Soph. El.)

It is unlikely that Lycophron was much younger than
Alcidamas, his
colleague in Gorgias' school, since his equalitarianism
would hardly have
attracted so much attention if it had become known
after Alcidamas had
succeeded Gorgias as the head of the school.
Lycophron's epistemological
interests (mentioned by Aristotle in Metaphysics,
io45b9, and Physics, i85b27)
are also a case in point, since they make it probable
that he was a pupil of
Gorgias' earlier period, i.e. before Gorgias confined
himself practically
exclusively to rhetoric. Of course, any opinion on
Lycophron must be highly
speculative, owing to the scanty information we have.

46 Barker, Greek Political Theory, I, p. 160.
Concerning Barker's further
contention (p. 161) that Plato's justice, as opposed to
that of the contract
theory, is not ' something external ', but rather,
internal to the soul, I may
remind the reader of Plato's frequent recommendations
of most severe
sanctions by which justice may be achieved; he always
recommends the use
of persuasion and force (cp. notes 5, 10 and 18 to
chapter 8). On the other
hand, some modern democratic states have shown that it
is possible to be
liberal and lenient without increasing criminality.

With my remark that Barker sees in Lycophron (as I do)
the originator
of the contract theory, cp. Barker, op cit., p. 63: ' Protagoras did not anticipate
the Sophist Lycophron in founding the doctrine of
Contract.' (Cp. with this
the text to note 27 to chapter 5.)

47 Cp. Gorgias, 483^ f.
From the way in which Socrates replies here to Callicles, it seems possible that the historical Socrates (cp. note 56 to chapter 10) may have countered the arguments in support of a biological naturalism of Pindar's type by arguing like this: If it is natural that the stronger should rule, then it is also natural that equality should rule, since the multitude which shows its strength by the fact that it rules demands equality. In other words, he may have shown the empty, ambiguous character of the naturalistic demand. And his success might have inspired Plato to proffer his own version of naturalism.

I do not see any reason why Socrates' later remark (soSa) on 'geometrical equality' should be interpreted as anti-equalitarian, i.e. why it should mean the same as the *proportionate equity* of the Laws, 744:0, ff., and 757a-e (cp. note 20 (i) to this chapter). This is what Adam suggests in his second note to Republic, 55805. The *geometrical* equality of the Gorgias, 508a, seems, however, to indicate Pythagorean influence (cp. note 56 (6) to chapter 10; see also the remarks in that note on the Cratylus).

Republic, 3586. Glaucon disclaims the authorship. In reading this passage, the reader's attention is easily distracted by the issue 'nature versus convention' which plays a major role in this passage as well as in Gallicles' speech in the Gorgias. However, Plato's major concern in the Republic is not to defeat conventionalism, but to denounce the rational protectionist approach as selfish. (That the conventionalist contract theory
was not Plato's main enemy emerges from notes 27-28 to chapter 5, and text.)

60 If we compare Plato's presentation of protectionism in the Republic with that in the Gorgias, then we find that it is indeed the same theory, although in the Republic much less emphasis is laid on equality. But even equality is mentioned, although only in passing, viz., in Republic, 359C:

'Nature . . ., by conventional law, is twisted round and compelled by force to honour equality.' This remark increases the similarity with Callicles' speech. (See Gorgias, esp. 483c/d.) But as opposed to the Gorgias, Plato drops equality at once (or rather, he does not even take the issue up) and never returns to it; which makes it only the more obvious that he was at pains to avoid the problem. Instead, Plato revels in the description of the cynical egoism which he presents as the only source from which protectionism springs. (For Plato's silence on equalitarianism, cp. especially note 14 to this chapter, and text.) A. E. Taylor, Plato: The Man and His Work (1926), p. 268, contends that while Callicles starts from 'nature', Glaucon starts from 'convention'.

51 Cp. Republic, 35Qa; my further allusions in the text are to 35Qb, 36Qd, ff. For the 'rubbing in', cp. 359a-362c, and the elaboration down to 3676. Plato's description of the nihilistic tendencies of protectionism fills altogether nine pages in the Everyman edition of the Republic; an indication of the significance Plato attached to it. (There is a parallel passage in the Laws, Sgoa, f.)

52 When Glaucon has finished his presentation, Adeimantus takes his place (with a very interesting and indeed most pertinent challenge to Socrates
to criticize utilitarianism), yet not until Socrates has stated that he thinks Glaucos's presentation an excellent one (362d). Adeimantus' speech is an amendment of Glaucos's, and it reiterates the claim that what I call protectionism derives from Thrasymachus' nihilism (see especially 3673, ff.) After Adeimantus, Socrates himself speaks, full of admiration for Glaucos as well as Adeimantus, because their belief in justice is unshaken in spite of the fact that they presented the case for injustice so excellently, i.e. the theory that it is good to inflict injustice as long as one can 'get away with it'. By emphasizing the excellence of the arguments proffered by Glaucos and Adeimantus, 'Socrates' (i.e. Plato) implies that these arguments are a fair presentation of the views discussed; and he ultimately states his own theory, not in order to show that Glaucos's representation needs emendation, but, as he emphasizes, in order to show that, contrary to the opinions of the protectionists, justice is good, and injustice evil. (It should not be forgotten cp. note 49 to this chapter that Plato's attack is not directed against the contract theory as such but solely against protectionism; for the contract theory is soon (Rep., SGgb-c; cp. text to note 29 to chapter 5) adopted by Plato himself, at least partially; including the theory that people 'gather into settlements' because 'every one expects in this way to further his own interests'.)

CHAPTER 7/NOTES 1-4 225

It must also be mentioned that the passage culminates with the impressive remark of 'Socrates' quoted in the text to note 37 to this chapter. This shows, finally, that Plato combats protectionism only by presenting it as an
immoral and indeed unholy form of egoism.

Finally, in forming our judgement on Plato's procedure, we must not forget that Plato likes to argue against rhetoric and sophistry; and indeed, that he is the man who by his attacks on the *Sophists' created the bad associations connected with that word. I believe that we therefore have every reason to censor him when he himself makes use of rhetoric and sophistry in place of argument. (Cp. also note 10 to chapter 8.)

63 We may take Adam and Barker as representative of the Platonists mentioned here. Adam says (note to 3586, ff.) of Glaucon that he resuscitates Thrasymachus' theory, and he says (note to 3733, ff.) of Thrasymachus that his is 'the same theory which is afterwards (in 3586, ff.) represented by Glaucon'. Barker says (op. cit., 159) of the theory which I call protectionism and which he calls 'pragmatism', that it is 'in the same spirit as Thrasymachus'.

64 That the great sceptics Carneades believed in Plato's presentation can be seen from Cicero (De Republic^ III, 8; 13; 23), where Glaucon's version is presented, practically without alteration, as the theory adopted by Carneades. (See also text to notes 65 and 66 and note 56 to chapter 10.)

In this connection I may express my opinion, that one can find a great deal of comfort in the fact that anti-humanitarians have always found it necessary to appeal to our humanitarian sentiments; and even in the fact that they often succeed in persuading us of their sincerity. It shows that they are well aware of the fact that these sentiments are deeply rooted in most of us, and that the despised 'many' are rather too good, too candid, and too
guileless, than too bad; while they are even ready to be told by their unscrupulous leaders that they are unworthy egoists, and that 'they fill their bellies like the beasts'.

NOTES TO CHAPTER 7

1 Cp. text to notes 2/3 to chapter 6.

2 Similar ideas have been expressed by J. S. Mill; thus he writes in his Logic (1st ed., pp. 557 f.): 'Although the actions of rulers are by no means wholly determined by their selfish interests, it is as security against those selfish interests that constitutional checks are required.' Similarly he writes in The Subjection of Women (p. 251 of the Everyman edition; italics mine) 'Who doubts that there may be great goodness, and great happiness and great affection, under the absolute government of a good man? Mean-while laws and institutions require to be adapted, not to good men, but to bad.' Much as I agree with the sentence in italics, I disagree with the other part of this quotation: / doubt. My reasons for doubting are given below.

3 Cp. for instance E. Meyer's remark (Gesch. d. Altertums, V, p. 4) that power is, in its very essence, indivisible '.

4 Cp. Republic, 56213-5656. In the text, I am alluding especially to 562C: * Does not the excess ' (of liberty) ' bring men to such a state that they badly want a tyranny? ' Cp. furthermore 563d/e: * And in the end, as you know well enough, they just do not take any notice of the laws, whether written or unwritten, since they want to have no despot of any kind over them. This then is the origin out of which tyranny springs.' (For the beginning of this
passage, see note 19 to chapter 4.

Other remarks of Plato's on the paradoxes of freedom and of democracy are: Republic, 564% : * Then too much freedom is liable to change into nothing else but too much slavery, in the individual as well as in the state . . Hence it is reasonable to assume that tyranny is enthroned by no other form of government than by democracy. Out of what I believe is the greatest possible excess of freedom springs what is the hardest and most savage form of slavery.' See also Republic, 565C/d : * And are not the common people in the habit of making one man their champion or party leader, and of exalting his position and making him great ? ' ' This is their habit.' * Then it seems clear that whenever a tyranny grows up, this democratic party-leadership is the origin from which it springs. 5

The so-called paradox of freedom is the well-known idea that freedom in the sense of absence of any restraining control must lead to very great restraint, since it makes the bully free to enslave the meek. This idea is, in a slightly different form, and with a very different tendency, clearly expressed by Plato.

Less well known is the paradox of tolerance: Unlimited tolerance must lead to the disappearance of tolerance. If we extend unlimited tolerance even to those who are intolerant, if we are not prepared to defend a tolerant society against the onslaught of the intolerant, then the tolerant will be destroyed, and tolerance with them. In this formulation, I do not imply, for instance,
that we should always suppress the utterance of intolerant philosophies; as long as we can counter them by rational argument and keep them in check by public opinion, suppression would certainly be most unwise. But we should claim the right even to suppress them, for it may easily turn out that they are not prepared to meet us on the level of rational argument, but begin by denouncing all argument; they may forbid their followers to listen to anything as deceptive as rational argument, and teach them to answer arguments by the use of their fists. We should therefore claim, in the name of tolerance, the right not to tolerate the intolerant. We should claim that any movement preaching intolerance places itself outside the law, and we should consider incitement to intolerance and persecution as criminal, exactly as we should consider incitement to murder, or to kidnapping; or as we should consider incitement to the revival of the slave trade. Another of the less well-known paradoxes is the paradox of democracy, or more precisely, of majority rule; i.e. the possibility that the majority may decide that a tyrant should rule. That Plato's criticism of democracy can be interpreted in the way sketched here, and that the principle of majority-rule may lead to self-contradictions, was first suggested, as far as I know, by Leonard Nelson. I do not think, however, that Nelson, who, in spite of his passionate humanitarianism and his ardent fight for freedom, adopted much of Plato's political theory, and especially Plato's principle of leadership, was aware of the fact that analogous arguments can be raised against any of the different particular forms of the theory of sovereignty.

All these paradoxes can be easily avoided if we frame our political demands in some such manner as this. We demand a government
that rules according
to the principles of equalitarianism and protectionism
; that tolerates all
who are prepared to reciprocate, i.e. who are tolerant
; that is controlled by,
and accountable to, the public. And we may add that
some form of majority
vote, together with institutions for keeping the public
well informed, is the best,
though not infallible, means of controlling such a
government. (No infallible
means exist.) Cp. also chapter 6, the last four
paragraphs in the text prior
to note 42 ; text to note 20 to chapter 17 ; note 7
(4), to chapter 24 ; and
note 6 to the present chapter.

6 Further remarks on this point will be found in
chapter 19, below.

6 The following remarks on the paradox of freedom may
possibly appear to
carry the argument too far ; since, however, the
arguments discussed in this
place are of a somewhat formal character, it may be
just as well to make them

CHAPTER 7/NOTES 7~12 227

more watertight, even if it involves a bit of hair-
splitting. Besides, my
experience in debates of this kind leads me to expect
that the defenders of
the leader-principle, i.e. of the sovereignty of the
best or the wisest, may
actually offer the following counter-argument : (a) if
' the wisest ' should
decide that the majority should rule, then he was not
really wise. As a
further consideration they may support this by the
assertion (b) that a wise
man would never establish a principle which might lead
to contradictions,
like that of majority-rule. My reply to (b) would be
that we need only to
alter this decision of the ' wise ' man in such a way
that it becomes free from
contradictions. (For instance, he could decide in favour of a government bound to rule according to the principle of equalitarianism and protectionism, and controlled by majority vote. This decision of the wise man would give up the sovereignty-principle; and since it would thereby become free from contradictions, it may be made by a 'wise' man. But of course, this would not free the principle that the wisest should rule from its contradictions.)

The other argument, namely (a), is a different matter. It leads dangerously close to defining the 'wisdom' or 'goodness' of a politician in such a way that he is called *wise' or 'good' only if he is determined not to give up his power. And indeed, the only sovereignty-theory which is free from contradictions would be the theory which demands that only a man who is absolutely determined to cling to his power should rule. Those who believe in the leader-principle should frankly face this logical consequence of their creed. If freed from contradictions it implies, not the rule of the best or wisest, but the rule of the strong man, of the man of power. (Cp. also note 7 to chapter 24.)

7 Cp. passage (7) in note 4 to chapter '2.

8 Cp. Apology, 32c. The Thirty tried to implicate Socrates in their crimes, but he resisted. This would have meant death to him if the rule of the Thirty had continued a little longer. Cp. also notes 53 and 56 to chapter 10.

9 Cp. Plato's Phaedo, 96-99. The Phaedo is, I believe, still partly Socratic, but very largely Platonic. The story of his philosophical development told by the Socrates of the Phaedo has given rise to much discussion. It is, I believe, an authentic autobiography neither of Socrates nor of Plato. It is simply
Plato's interpretation of Socrates' development.

Socrates' attitude towards science (an attitude which combined the keenest interest in rational argument with a kind of modest agnosticism) was incomprehensible to Plato. He tried to explain it by referring to the backwardness of Athenian science in Socrates' day, as opposed to Pythagoreanism. Plato thus presents this agnostic attitude in such a way that it is no longer justified in the light of his newly acquired Pythagoreanism. (And he tries to show how much the new metaphysical theories of the soul would have appealed to Socrates' burning interest in the individual; cp. notes 44 and 56 to chapter 10, and note 58 to chapter 8.)

10 It is the version that involves the square root of two, and the problem of irrationality; i.e. it is the very problem that precipitated the dissolution of Pythagoreanism. By refuting the Pythagorean arithmetization of geometry, it gave rise to the specific deductive-geometrical methods which we know from Euclid. The use of this problem in the Meno might be connected with the fact that there is a tendency in some parts of this dialogue to *show off* the author's (hardly Socrates') acquaintance with the 'latest' philosophical developments and methods.

11 Gorgias, 52 id, f.

12 Cp. Grossman, Plato To-Day, 1 18. 'Faced by these three cardinal errors of Athenian Democracy, ...' How truly Grossman understands Socrates may be seen from op. cit. 9 93: 'All that is good in our Western culture has sprung from this spirit, whether it is found in scientists, or priests, or politicians, or quite ordinary men and women who have refused to prefer political falsehoods.
to simple truth . . in the end, their example is the only force which can break the dictatorship of force and greed . . . Socrates showed that philosophy is nothing else than conscientious objection to prejudice and unreason.'

18 Cp. Grossman, op. cit., 117 f. (first group of italics mine). It seems that Grossman has for the moment forgotten, that in Plato's state, education is a class monopoly. It is true that in the Republic the possession of money is not a key to higher education. But this is quite unimportant. The important point is that only the members of the ruling class are educated. (Cp. note 33 to chapter 4.) Besides, Plato was in his later life anything but an opponent of Plutocracy, which he much preferred to a classless or equalitarian society: cp. the passage from the Laws, 744-b ff., quoted in note 20 (i) to chapter 6. For the problem of state control in education, cp. also note 42 to that chapter, and notes 39-41, chapter 4.

14 Burnet takes (Greek Philosophy, I, 1 78) the Republic to be purely Socratic (or even pre-Socratic). But he does not even seriously attempt to reconcile this opinion with an important statement which he quotes from Plato's Seventh Letter (326a, cp. Greek Philosophy 1,2 1 8) which he believes to be authentic. Cp. note 56 (5, d) to chapter 10.

15 Laws, 942b, quoted in text to note 33, chapter 6. 10 Republic, 54oc.

17 Cp. the quotations from the Republic, 473c-e, quoted in text to note 44, chapter 8.

18 Republic, 4g8b/c. Cp. the Laws, 634d/e, in which Plato praises the
Dorian law that 'forbids any young man to question which of the laws are right and which are wrong, and makes them all unanimous in proclaiming that the laws are all good'. Only an old man may criticize, adds the old writer; and even he may do so only if no young man can hear him. See also note 21 to this chapter, and notes 40 and 23 to chapter 4.

19 Republic, 497d.

Grote, the great democrat, comments on this point (i.e. on the 'brighter' passages 537c-54o) very strongly: 'The dictum forbidding dialectic debate with youth... is decidedly anti-Socratic... It belongs indeed to the case of Meletus and Anytus, in their indictment against Socrates... It is identical with their charge against him, of corrupting the youth... And when we find him (= Plato) forbidding all such discourse at an earlier age than thirty years we remark as a singular coincidence that this is the exact prohibition which Critias and Charicles actually imposed upon Socrates himself, during the short-lived dominion of the Thirty Oligarchs at Athens.' (Grote, Plato and the other Companions of Socrates, ed. 1875, v 1-HI*239-)

22 Toynbee has admirably shown how successfully a Platonic system of educating rulers may work in an arrested society; cp. A Study of History, III, especially 33 ff.; cp. notes 32 (3) and 45 (2) to chapter 4. It may be remarked that the idea, contested in the text, that those who are good in obeying will also be good in commanding, is also Platonic. Cp. Laws, 7626.
23 Some may perhaps ask how an individualist can demand devotion to any cause, and especially to such an abstract cause as scientific inquiry. But such a question would only reveal the old mistake (discussed in the last chapter), the identification of individualism and egoism. An individualist can be unselfish, and he can devote himself not only to the help of individuals, but also to the development of the institutional means for helping other people. (Apart from that, I do not think that devotion should be demanded, but only that it should be encouraged.) I believe that devotion to certain institutions, for instance, to those of a democratic state, and even to certain traditions, may fall well within the realm of individualism, provided that the humanitarian aims of these institutions are not lost sight of. Individualism must not be identified with an anti-institutional personalism. This is a mistake frequently made by individualists. They are right in their hostility to collectivism, but they mistake institutions for collectives (which claim to be aims in themselves), and therefore become anti-institutional personalists; which leads them dangerously close to the leader-principle. (I believe that this partly explains Dickens' hostile attitude towards Parliament.) For my terminology ('individualism' and *collectivism') see text to notes 26-29 to chapter 6.

25 Gp. for these events: Meyer, Gesch. d. Altertums, V, pp. 522-525, and 488 f.; see also note 69 to chapter 10. The Academy
was notorious for breeding tyrants. Among Plato's pupils were Chaireon, later tyrant of Pellene, and Hermias, later tyrant of Atarneus and Assos. (Cp. Athen., XI, 508.)

(1) Plato's lack of success as an educator is not very surprising if we look at the principles of education and selection developed in the First Book of the Laws (from 637d and especially 6433: 'Let me define the nature and meaning of education' to the end of 6sob). For in this long passage he shows that there is one great instrument of educating, or rather, of selecting the man one can trust. It is wine, drunkenness, which will loose his tongue, and give you an idea of what he is really like. 'What is more fitting than to make use of wine, first of all to test the character of a man, and secondly, to train him? What is cheaper, and less objectionable?' (649d/e). So far, I have not seen the method of drinking discussed by any of the educationists who glorify Plato. This is strange, for the method is still in use; not so much in the Platonic secondary schools, but surely in the universities.

(2) In fairness to the leader-principle, it must be admitted, however, that others have been more fortunate than Plato in their selection. Leonard Nelson (cp. note 4 to this chapter), for instance, who believed in this principle, seems to have had a unique power both of attracting and of selecting a number of men and women who have remained in the most trying and tempting circumstances true to their cause. But theirs is a better cause than Plato's; it is the humanitarian idea of freedom and equalitarian justice.

(3) There remains this fundamental weakness in the theory of the benevolent dictator, a theory still flourishing even
among some democrats.
I have in mind the theory of the leading personality
whose intentions are
for the best of his people and who can be trusted. Even
if that theory were
in order; even if we believe that a man can continue,
without being controlled
or checked, in such an attitude: how can we assume
that he will detect a
successor of the same rare excellence? (Cp. also notes
3 and 4 to chapter 9,
and note 69 to chapter 10.)

(4) Concerning the problem of power, mentioned in the
text, it is interest-
ing to compare the Gorgias (5256, f.) with the Republic
(615d, f.). The two
passages are closely parallel. But the Gorgias insists
that the greatest criminals
are always 'men who come from the class which
possesses power'; private
persons may be bad, it is said, but not incurable. In
the Republic, this clear
warning against the corrupting influence of power is
omitted. Most of the
greatest sinners are still tyrants; but, it is said, 'there are also some private
people among them'. (In the Republic, Plato relies on
self-interest which,
he trusts, will prevent the guardians from misusing
their power; cp. Rep.,
466b/c, quoted in text to note 41, chapter 6. It is not
quite clear why self-
interest should have such a beneficial effect on
guardians, but not on tyrants.)

NOTES TO CHAPTER 8

1 Republic, 4756; cp. also e.g. 485^ f., 5010.
4 With this and the three following quotations, cp.
Republic, 4076 and 406c. See also Politicus, 293a, f., 2950-2966, etc.

5 Cp. Laws, 72oc. It is interesting to note that the passage (718c~722b) serves to introduce the idea that the statesman should use persuasion, together with force (7220); and since by ' persuasion ' of the masses, Plato means largely lying propaganda cp. notes 9 and 10 to this chapter and the quotation from Republic, 414b/c quoted there in the text it turns out that Plato's thought in our passage from the Laws, in spite of this novel gentleness, is still possessed by the old associations the doctor-politician administering lies. Later on (Laws, 857c/d), Plato complains about an opposite type of doctor: one who talks too much philosophy to his patient, instead of concentrating on the cure. It seems likely enough that Plato reports here some of his experiences when he fell ill while writing the Laws.

8 Republic, 389^ With the following short quotations cp. Republic, 459C.

8 Cp. Grossman, Plato To-Day (1937), 130; cp. also the immediately preceding pages. It seems that Crossman still believes that lying propaganda was intended only for the consumption of the ruled, and that Plato intended to educate the rulers to a full use of their critical faculties; for I find now (in The Listener, vol. 27, p. 750) that he writes: * Plato believed in free speech, free discussion only for the select few.' But the fact is that he did not believe in it at all. Both in the Republic and in the Laws (cp. the passages quoted in notes 1 8-2 1 to chapter 7, and text), he expresses his fear lest anybody who is
not yet senile should speak freely, and thus endanger
the rigidity of the arrested
doctrine, and therefore the petrifaction of the
arrested society. See also the
next two notes.

9 Republic, 414b/c. In 414d, Plato reaffirms his hope
of persuading ' the
rulers themselves and the military class, and then the
rest of the city ', of the
truth of his lie. Later he seems to have regretted his
frankness ; for in the
Statesman, 271 a, f., he speaks as if he believed in
the truth of the same Myth
of the Earthborn which, in the Republic, he had been
reluctant (see note 11
to this chapter) to proffer even as an fc inspired lie
'. (What I translate as an
' inspired ' or ' ingenious lie ' is usually translated
' noble lie ' or * noble
falsehood ' or even * spirited fiction '). See also
notes 10 and 18 to this
chapter.

10 Cp. Republic, 5196, f, 5 quoted in the text to note
35 to chapter 5 ; on
persuasion and force, see also Republic, 366d,
discussed in the present note, below,
and the passages referred to in notes 5 and 18 to this
chapter.

The Greek word usually translated by persuasion can
mean (a) ' persuasion
by fair means ' and (b) ' talking over by foul means ' ; i.e. ' make-believe '
(see below, sub. (D), i.e. Rep., 414c) and sometimes it
means even ' persuasion
by gifts ', i.e. bribery (see below, sub. (D), i.e. Rep., 390e). Especially in the
phrase ' persuasion and force ', the term ' persuasion
' is often interpreted in
sense (a), and the phrase is often (and sometimes
appropriately) translated
* by fair or foul means ' (cp. Davies' and Vaughan's
translation ' by fair means
or foul ', of the passage (C), Rep., sGsd, quoted
below). I believe, however,
that Plato, when recommending * persuasion and force ' as instruments of
political technique, uses the words in a more literal sense, and that he recom-
mends the use of rhetorical propaganda together with violence.

The following passages are significant for Plato's use of the term per-

CHAPTER 8/NOTES 11-15 231

suasion in sense (b), and especially in connection with political propaganda.
(A) Gorgias, 453a to 466a, especially 454b~455a ; Phaedrus, aGob, ft., Theaetetus, 201a ; Sophocles, 222C ; Philebus, 583. In all these passages, persuasion (the 'art of persuasion' as opposed to the 'art of imparting true knowledge') is associated with rhetoric, make-believe, and propaganda. In the Republic, 364e~365d deserves attention. (B) In 3646 ('they persuade', i.e. mislead into believing, 'not only individuals, but whole cities'), the term is used much in the same sense as in 414b/c (quoted in the text to note 9, this chapter) the passage of the 'inspired lie'. (C) 365d is interesting because it uses a term which Lindsay translates very aptly by 'cheating' as a kind of paraphrase for 'persuading'. ('In order not to be caught . . . we have the masters of persuasion at our disposal ; . . . thus by persuasion and force, we shall escape punishment. But, it may be objected, one cannot cheat, or force, the gods . . .') Furthermore (D) in Republic, 3906, f., the term 'persuasion' is used in the sense of bribery. (This must be an old use; the passage is supposed to be a quotation from Hesiod. It is interesting that Plato who so often argues against the idea that men can 'persuade' or bribe the gods, makes some con-
ception to it in the next passage, 399a/b.) Next we come to 414b/c, the passage of the 'inspired lie'; immediately after
this passage, in 4140 (rp. also the next note in this chapter), ' Socrates ' makes the cynical remark (E) :
' It would need much persuading to make anybody believe in this story '.
Lastly, I may mention (F) Republic, 51 id and 533e, where Plato speaks of persuasion or belief or faith (the root of the Greek word for ' persuasion ' is the same as that of our faith ') as a lower cognitive faculty of the soul, corresponding to the formation of delusive) opinion about things in flux (cp. note 21 to chapter 3, and especially the use of persuasion ' in Tim., 51e), as opposed to rational knowledge of the unchanging Forms. For the problem of ' moral ' persuasion, see also chapter 6, especially notes 52/54 and text, and chapter 10, especially text to notes 56 and 65, and note 69.

11 Republic, 415a. The next quotation is from 415C. (See also the Cratylus, 398a.) Gp. notes 12-14 to the present chapter and text, and notes 27 (s) 29> and 31 to chapter 4.

For my remark in the text, earlier in this paragraph, concerning Plato's uneasiness, cp. Republic, 414c-d, and last note, (E) :
' It would need much persuading to make anybody believe in this story,' says Socrates. * You seem to be rather reluctant to tell it,' replies Glaucon * You will understand my reluctance ', says Socrates, ' when I have told it.' ' Speak and don't be frightened ', says Glaucon. This dialogue introduces what I call the first idea of the Myth (proffered by Plato in the Statesman as a true story ; cp. note 9 to this chapter ; see also Laws, 74oa) . As mentioned in the text, Plato indicates that it is this * first idea ' which is the reason for his hesitation, for Glaucon replies to this idea :
' Not without reason were you so long ashamed to tell your lie.' No similar rhetorical remark is made after
Socrates has told ' the rest of the story ', i.e., the Myth of Racialism.

12 The passage is from the Republic, 546a, ff.; cp. text to notes 36-40 to chapter 5. The intermixture of classes is clearly forbidden in 43 5C also; cp. notes 27 (3) and 31 to chapter 4, and note 40 to chapter 6^.

13 Republic, 547a. (Cp. also text to note 39/40 to chapter 5, and to notes 43 and 52 to the present chapter.)

15 Cp. Adam's note to Republic, 414b, ff., italics mine. The great exception is Grote (Plato, and the Other Companions of Socrates, London, 1875, III, 240), who sums up the spirit of the Republic, and its opposition to that of the Apology:

6 In the . . Apology, we find Socrates confessing his own ignorance. . . But the Republic presents him in a new character. . . He is himself on the throne of King Nomos: the infallible authprity, temporal as well as spiritual ^.

232 CHAPTER 8/NOTES 16-23

from which all public sentiment emanates, and by whom orthodoxy is determined. . . He now expects every individual to fall into the place, and contract the opinions, prescribed by authority; including among these opinions deliberate ethical and political fictions, such as about the . . earthborn men. . . Neither the Socrates of the Apology, nor his negative Dialectic, could be allowed to exist in the Platonic Republic.' (Italics mine; see also Grote, op. cit., p. 1 88.)

The doctrine that religion is opium for the people, although not in this particular
formulation, turns out to be one of the tenents of Plato and the Platonists. (Cp. also note 17 and text, and especially note 18 to this chapter.) It is, apparently, one of the more esoteric doctrines of the school, i.e. it may be discussed only by sufficiently elderly members (cp. note 18 to chapter 7) of the upper class. But those who let the cat out of the bag are prosecuted for atheism by the idealists.

16 For instance Adam, Barker, Field.

17 Gp. Diels, Vorsokratiker 2, Gritias fragm. 25. (I have picked just four characteristic lines out of more than forty.) It may be remarked that the passage commences with a sketch of the social contract (which even somewhat resembles Lycophron's equalitarianism; cp. note 45 to chapter 6). On Gritias, cp. especially note 48 to chapter 10.

18 Cp. the Laws, go8b. Gritias' view seems to have been part of the Platonic school tradition, as indicated by the following passage from Aristotle's Metaphysics (io74b3) which at the same time provides another example of the use of the term 'persuasion' for 'propaganda' (cp. notes 5 and 10 to this chapter). * The rest . . . has been added in the form of a myth, with a view to the persuasion of the mob, and to legal and general (political) expediency . .' Cp. also Plato's attempt in the Politicus, 2713, , to argue in favour of the truth of a myth in which he certainly did not believe. (See notes 9 and 15 to this chapter.)

19 Laws, go8b.

21 For the conflict between good and evil, see op. cit., go/j-goG. See especially go6a/b (justice versus injustice).
Immediately preceding is go3c, a passage quoted above in the text to note 35 to chapter 5 and to note 27 to chapter 6. See also note 32 to the present chapter.

23 The paragraph to which this note is appended indicates my adherence to an absolutist * theory of truth which is in accordance with the common idea that a statement is true if (and only if) it agrees with the facts it describes. This * absolute * or * correspondence theory of truth * (which goes back to Aristotle) was first clearly developed by A. Tarski (Der Wahrheitsbegriff in den formalisierten Sprachen, Polish ed. ig33, German translation ig36), and is the basis of a theory of logic called by him Semantics (cp. note 2g to chapter 3 and note 5 (2) to chapter 5); see also R. Carnap's Introduction to Semantics, ig42, which develops the theory of truth in detail. I am quoting from p 28:

* It is especially to be noticed that the concept of truth in the sense just explained we may call it the semantical concept of truth is fundamentally different from concepts like * believed *, * verified *, * highly confirmed *, etc. *

A similar, though undeveloped view can be found in my Logik der Forschung, ch. 84, on * Truth * and * Confirmation * (pp. 203 ff.); this was written before I became acquainted with Tarski's Semantics, which is the reason why my theory is only rudimentary. The pragmatist theory of truth (which derives from Hegelianism) was criticized by Bertrand Russell from the point of view of an absolutist theory of truth as early as ig07; and recently he has shown the connection between a relativist theory of truth and the creed of fascism.

See Russell, Let the People Think, pp. 77, 79.
CHAPTER 8/NOTES 24-32 233

24 I mean especially Republic, 4740-502. The following quotation is op. cit., 4756.

25 For the seven quotations which follow, in this paragraph, see: (i) and (2), Republic, 4760; (3), (4), (5), op. cit., 500d-e; (6) and (7) : op. cit., 501a/b; with (7), cp. also the parallel passage op. cit., 4840. Sec, furthermore, Sophist, 253d/e; Laws, 964a-966a (esp. 9650/0).

26 Gp. op. cit., 50 ic.

27 Cp. especially Republic, 509a, f. See 5090: 'The sun induces the sensible things to generate' (although he is not himself involved in the process of generation); similarly, you may say of the objects of rational knowledge that not only do they owe it to the Good that they can be known, but their reality and even their essence flows from it; although the good is not itself an essence but transcends even essences in dignity and power.' (With ^ogb, cp. Aristotle, De Gen. et Con., 336a 15, 31, and Phys., 194b 13.) In 510b, the Good is described as the absolute origin (not merely postulated or assumed), and in 511b, it is described as 'the first origin of everything'.

28 Cp. especially Republic, 508b, f. See 508b/c: * What the Good has begotten in its own likeness' (viz. truth) 'in the link, in the intelligible world between reason and its objects' (i.e. the Ideas) 'in the same way as, in the visible world, that thing' (viz. light which is the offspring of the sun) 'which is the link between sight and its objects' (i.e. sensible things).

29 Cp. op. cit., 505a; 534^ ff.
The definition of the Good, here quoted, as *the class of the determinate (or finite, or limited) conceived as a unity* is, I believe, not so hard to understand, and is in full agreement with other of Plato's remarks. The *class of the determinate* is the class of the Forms or Ideas, conceived as male principles, or progenitors, as opposed to the female, unlimited or indeterminate space (cp. note 15 (2) to chapter 3). These Forms or primogenitors are, of course, good, in so far as they are ancient and unchanging originals, and in so far as each of them is one as opposed to the many sensible things which it generates. If we conceive the class or race of the progenitors as many, then they are not absolutely good; thus the absolute Good can be visualized if we conceive them as a unity, as One as the One primogenitor. (Cp. also Arist, Met., 988a 10.)

Plato's Idea of the Good is practically empty. It gives us no indication of what is good, in a moral sense, i.e. what we ought to do. As can be seen especially from notes 27 and 28 to this chapter, all we hear is that the Good is highest in the realm of Form or Ideas, a kind of super-Idea, from which the Ideas originate, and receive their existence. All we could possibly derive from this is that the Good is unchangeable and prior or primary and therefore ancient (cp. note 15 (2) to chapter 3), and One Whole; and, therefore, that those things participate in it which do not change, i.e., the good is what preserves (cp. notes 2 and 3 to chapter 4), and what is ancient, especially the ancient laws (cp. note 23 to chapter 4, note 7,
paragraph on Platonism, to chapter 5, and note 18 to chapter 7), and that holism is good (cp. note 21 to the present chapter); i.e., we are again thrown back, in practice, to totalitarian morality (cp. text to notes 40/41 to chapter 6).

If the Seventh Letter is genuine, then we have there (314b/c) another statement by Plato that his doctrine of the Good cannot be formulated; for he says of this doctrine: 'It is not capable of expression like other branches of study.' (Cp. also note 57 to chapter 10.)

It is again Grote who clearly saw and criticized the emptiness of the Platonic Idea or Form of Good. After asking what this Good is, he says:

234 CHAPTER 8/NOTES 33-40

(Plato, III, 241 f.): 'This question is put. . . But unfortunately it remains unanswered. . . In describing the condition of other men's minds that they divine a Real Good . . do everything in order to obtain it, but puzzle themselves in vain to grasp and determine what it is he ' (Plato) ' has unconsciously described the condition of his own.' It is amazing to see how few modern writers have taken any notice of Grote's excellent criticism of Plato.

33 For the next quotations compare: (i) : Republic, 50ob-c ; (2) : op. cit., 485a/b. This passage is very interesting. It is, as Adam reaffirms (note to 485bg) the first passage in which 'generation' and 'degeneration' are employed in this half-technical sense. It refers to the flux, and to Parmenides' changeless entities. And it introduces the main argument in
favour of the rule of the philosophers. See also note 26 (i) to chapter 3
and note 2 (2) to chapter 4. In the Laws 68gc-d, when discussing the
' degeneration ' (688c) of the Dorian kingdom brought about by the ' worst
ignorance ' (the ignorance, namely, of not knowing how to obey those who
arc rulers by nature ; see 68gb), Plato explains what he means by wisdom:
only such wisdom as aims at the greatest unity or *
unisonity ' entitles a man
to authority. And the term ' unisonity' is explained in
the Republic, 59 ib
and d, as the harmony of the ideas of justice (i.e. of
keeping one's place) and
of temperance (of being satisfied with it). Thus we are
again thrown back
to our starting point.

34 For the problem of the priest caste, sec the
Timaeus, 24a. In a passage
which clearly alludes to the best or * ancient ' state
of the Republic, the priest
caste takes the place of the ' philosophic rare ' of
the Republic. (Gp., however,
the attacks on priests, and even on Egyptian priests,
in the earlier Statesman,
2god, f.)

The remark of Adam's, quoted in the text in the
paragraph after the
next, is from his note to Republic, 547a3 (quoted above
in text to note 43 to
chapter 5).

35 Gp. for instance Republic, 484^ 5000, ff.

38 Republic, 535a/b. All that Adam says (cp. his note
to 535b8) about the
term which I have translated by ' awe-inspiring '
supports the usual view
that the term means ' grim ' or ' awful ', especially
in the sense of ' inspiring
terror '. Adam's suggestion that we translate *
masculine ' or * virile ' follows
the general tendency to tone down what Plato says.
Lindsay translates :
* of . . sturdy morals J .
37 Op. cit., 54oc. It is most interesting to note how Plato transforms the Parmenidian One when arguing in favour of an aristocratic hierarchy. The opposition one many is not preserved, but gives rise to a system of grades: the one Idea the few who come close to it the more who are their helpers the many, i.e. the mob (this division is fundamental in the Statesman). As opposed to this, Antisthenes' monotheism preserves the original Eleatic opposition between the One (God) and the Many (whom he probably considered as brothers since equal in their distance from God). Antisthenes was influenced by Parmenides through Zeno's influence upon Gorgias. Probably there was also the influence of Democritus, who had taught: 'The wise man belongs to all countries alike, for the home of a great soul is the whole world.'

38 Republic, sood.

89 The quotations are from Republic, 459b, and ff.; Cp. also note 34 to chapter 4. Cp. also the three similes of the Statesman, where the ruler is compared with (i) the shepherd, (2) the doctor, (3) the weaver whose functions are explained as those of a man who blends characters by skilful breeding (3 iob, f.)

40 Op. cit., 4603. My statement that Plato considers this law very important is based on the fact that Plato mentions it in the outline of the Republic in the Timaeus, 18d/e.

41 Op. cit. y 4600. The suggestion is ' soon taken up
', viz. in 4680, cp. the next note.

48 For the story of the Number and the Fall, cp. notes 1 3 and 52 to this chapter, notes 39/40 to chapter 5, and text.

44 Republic, 4730-6. Concerning the term which I have translated by ' oligarchs * cp. the end of note 57, below. It is equivalent to * hereditary aristocrats '.

The phrase which, for stylistic reasons, I have put in brackets, is important, for in it Plato demands the suppression of all ' pure ' philosophers (and unphilosophical politicians). A more literal translation of the phrase would be this: ' while the many ' (who have) ' natures ' (disposed or gifted) * for drifting along, nowadays, in one alone of these two, are eliminated by force '. Adam admits that the meaning of Plato's phrase is ' that Plato refuses to sanction the exclusive pursuit of knowledge ' ; but his suggestion that we soften the meaning of the last words of the phrase by translating: ' are forcibly debarred from exclusively pursuing either ' (italics his ; cp. note to 473d24, vol. I, 330 of his ed. of the Republic) has no foundation in the original, only in his tendency to idealize Plato. The same holds for Lindsay's translation ( ' are forcibly debarred from this behaviour '). Whom does Plato wish to suppress? I believe that ' the many ' whose limited or incomplete talents or * natures ' Plato condemns here, are identical (as far as philosophers are concerned) with the ' many whose natures are incomplete ', mentioned in Republic, 495d ; and also with the * many ' (philosophers) ' whose wickedness is inevitable ', mentioned in 4896 (cp. also 4906 7491 a) ; cp. notes 47, 56, and 59 to this
chapter (and note 23 to chapter 5). The attack is, therefore, directed on the one hand against the *uneducated* democratic politicians, on the other hand most probably mainly against Antisthenes, the 4 uneducated bastard', the equalitarian philosopher.

46 Cp. for instance Gomperz, Greek Thinkers, V, 12, 2 (German ed., vol. II 2, 382); or Lindsay's translation of the Republic.

47 It must be admitted that Plato's attitude towards Antisthenes raises a highly speculative problem; this is of course connected with the fact that very little is known about Antisthenes from first-rate sources. Even the old Stoic tradition that the Cynic school or movement can be traced back to Antisthenes is at present often questioned (cp., for instance, G. C. Field's Plato, 1930, or D. R. Dudley, A History of Cynicism, 1937) although perhaps not on quite sufficient grounds (cp. Fritz's review of the last-mentioned book in Mind, vol. 47, p. 390). In view of what we know, especially from Aristotle, about Antisthenes, it appears to me highly probable that there are many allusions to him in Plato's writings; and even the one fact that Antisthenes was, apart from Plato, the only member of Socrates' inner circle who taught philosophy at Athens, would be a sufficient justification for searching Plato's work for such allusions. Now it seems to me rather probable that a series of attacks in Plato's work first pointed out by Duemmler (especially Rep. 495d/e mentioned below in note 56 to this chapter; Rep.,
535e, f., Soph., 25 ib) represents these allusions. There is a definite resemblance (or so at least it appears to me) between these passages and Aristotle's scornful attacks on Antisthenes. Aristotle, who mentions Antisthenes' name, speaks of him as of a simpleton, and he speaks of ' uneducated people such as the Antisthenesians' (cp. note 54 to chapter n). Plato, in the passages mentioned, speaks in a similar way, but rather more sharply. I have in mind, first the passage from the Sophist, 25 ib, which corresponds very closely indeed to Aristotle's first passage. Regarding the two passages from the Republic, we must remember that, according to the tradition, Antisthenes was a ' bastard ' (his mother came from barbarian Thrace), and that he taught in the Athenian gymnasion reserved for * bastards *. Now we find, in Republic, 5356, f. (cp. end of note 52 to this chapter) an attack which is so specific that an individual person must be intended. Plato speaks of somebody with a * crippled soul " who, though he loves truth (as a Socratic would) does not attain it, since he ' wallows in ignorance ' (probably because he does not accept the theory of Forms); and he warns the city not to trust such ' cripples and bastards '. I think it likely that Antisthenes is the object of this undoubtedly personal attack; the recognition that the enemy hates lies seems to me an especially strong argument, occurring as it does in an attack of extreme violence. But if this passage refers to Antisthenes, then it is very likely that a very similar passage refers to him also, viz. Republic, 495d/e, where Plato again describes his victim as possessing a disfigured or crippled soul as well as
body. He insists in this passage that the object of his contempt, in spite of aspiring to be a philosopher, is so depraved that he is not even ashamed of doing degrading ("banausic"; cp. note 4 to chapter 11) manual labour. Now we know of Antisthenes that he recommended manual labour which he held in high esteem (for Socrates' attitude, cp. Xenophon, Mem., II, 7, 10), and that he practised what he taught; a further strong argument that the man with the crippled soul is Antisthenes.

Now in the same passage, Republic, 495d, there is also a remark about *the many whose natures are incomplete*, and who nevertheless aspire to philosophy. This seems to refer to the same group (the *Antistheneans* of Aristotle) of *many natures* whose suppression is demanded in Republic, 473c-e, discussed in note 44 to this chapter. Cp. also Republic 4890, mentioned in notes 59 and 56 to this chapter.

48 We know (from Cicero, De Natura Deorum, and Philodemus, De Pietate) that Antisthenes was a monotheist; and the form in which he expressed his monotheism (there is only One God *according to nature*, i.e., to truth, although there are many *according to convention*) shows that he had in mind the opposition nature convention which, in the mind of a former member of the school of Gorgias and contemporary of Alcidamas and Lycophron (cp. note 13 to chapter 5) must have been connected with equalitarianism.

This in itself does not of course establish the conclusion that the half-barbarian Antisthenes believed in the brotherhood of Greeks and barbarians. Yet it seems to me extremely likely that he did.

As W. W. Tarn (Alexander the Great and the Unity of
Mankind; cp. note 13
(2) to chapter 5) has shown, the idea of the unity of mankind can probably be traced back at least to Alexander the Great. I think that by a very similar line of reasoning, we can trace it farther back; to Diogenes, Antisthenes, and possibly to Socrates and the 'Great Generation' of the Periclean age (cp. note 27 to chapter 10, and text). This seems, even without considering the more detailed evidence, likely enough; for a cosmopolitan idea can be expected to occur as a corollary of such imperialist tendencies as those of the Periclean age (cp. Rep., 494c/d, mentioned in note 50 (5) to this chapter, and the First Alcibiades, 1050, if.; see also text to notes 9-22, 36 and 47 to chapter 10). This is especially likely if other equalitarian tendencies exist. I do not intend to belittle the significance of Alexander's deeds, but his ideas seem to me, in a way, a renaissance of some of the best ideas of fifth-century Athenian imperialism.

Proceeding now to details, I may first say that there is strong evidence that at least in Plato's (and Aristotle's) time, the problem of equalitarianism was clearly seen to be concerned with two fully analogous distinctions, that between Greeks and barbarians on the one side and that between masters (or free men) and slaves on the other; cp. with this note 13 to chapter 5. Now we have very strong evidence that the fifth-century Athenian movement against slavery was not confined to a few intellectualists like Euripides, Antiphon, Hippias, etc., but that it had considerable practical success. This evidence is contained in the unanimous reports of the enemies of
Athenian democracy
(esp. the 'Old Oligarch', Plato, Aristotle; cp. notes 17, 18 and 29 to chapter 4, and 36 to chapter 10).

If we now consider the scanty available evidence concerning cosmopolitism, it appears, I believe, in a different light. Thus the Old Oligarch (2, 7) attacks Athens for an eclective cosmopolitan way of life. Plato's attacks on cosmopolitan or similar tendencies, scanty as they are, are especially valuable. (I have in mind passages like Rep., 5626/5633, which should be compared with the ironical description in Menexenus, 245c-d, in which Plato sarcastically eulogizes Athens for its consistent hatred of barbarians; Rep., 494c/d; of course, the passage Rep., 4690-47 ic, must be considered in this context too.) Much as I admire Tarn's analysis, I do not think that he does full justice to the various extant statements of this fifth-century movement, for instance to Antiphon (cp. p. 149, note 6 of his paper) or Euripides or Hippias, or Democritus (cp. note 29 to chapter 10) or to Diogenes (p. 150, note 12) and Antisthenes. I do not think that Antiphon wanted only to stress the biological kinship between men, for he was undoubtedly a social reformer; and 'by nature' meant to him 'in truth'. It therefore seems to me practically certain that he attacked the distinction between Greeks and barbarians as being fictitious. Tarn comments on Euripides' fragment which states that a noble man can range the world like an eagle the air by remarking that 'he knew that an eagle has a permanent home-rock'; but this remark does not do full justice to the fragment; for in order to be a cosmopolitan, one need not give up one's permanent home. In the light of all this, I do not see why Diogenes' meaning was purely 'negative' when he replied to the question
* where are you from? * by saying that he was a cosmopolitan, a citizen of the whole world.

Antisthenes' monotheism also must be considered in the light of this evidence. There is no doubt that this monotheism was not of the Jewish, i.e. tribal and exclusive type. (Should the story of Diog. Laert., VI, 13, that Antisthenes taught in the Gynosarges, the gymnasium for ' bastards ', be true, then he must have deliberately emphasized his own mixed and barbarian descent.) Tarn is certainly right when he points out (p. 145) that Alexander's monotheism was connected with his idea of the unity of mankind. But the same should be said of the cynic ideas, which were influenced, as I believe (see the last note), by Antisthenes, and in this way by Socrates. (Cp. especially the evidence of Epictetus, I, 9, i, with D.L., VI, 2, 63-71 ; also Gorgias, 4926 with D.L., VI, 105.)

In view of all this it does not seem very unlikely that Alexander (who was, as Tarn hints, not particularly impressed by his teacher Aristotle) may have been genuinely inspired, as the tradition reports, by Diogenes' ideas; and what he heard from Diogenes was likely to be in the spirit of the equalitarian tradition.

49 Cp. Republic, 46913-47 ic, especially 47ob-d, and 46gb/c. Here indeed we have (cp. the next note) a trace of something like the introduction of a new ethical whole, more embracing than the city; namely the unity of Hellenic superiority. As was to be expected (see the next note (i) (b)), Plato elaborates the point in some detail.

60 In this note, further arguments are collected bearing on the interpretation of Republic, 4736, and the problem of Plato's
humanitarianism. I wish to

express my thanks to my colleague, Dr. H. D. Broadhead, whose criticism has greatly helped me to complete and clarify my argument.

(1) One of Plato's standard topics (cp. the methodological remarks, Rep., 3686, 445C, 577c and note 32 to chapter 5) is the opposition and comparison between the individual and the whole, i.e. the city. The introduction of a new whole, more comprehensive than even the city, viz. mankind, would be a most important step for a holist to take; it would need (a) preparation and (b) elaboration, (a) Instead of such a preparation we get the above mentioned passage on the opposition between Greeks and barbarians (Rep., 46Qb-471c). (b) Instead of an elaboration, we find, if anything, a withdrawal of the ambiguous expression 'race of men', in the six repetitions or variations (viz. 4876, 49gb, 50oe, 5010, 536a-b, discussed in note 52 below, and the summary 54od/e with the afterthought 54ib) of the key-passage under consideration (i.e., of Rep., 473d/e). In two of them (4876, 5006) the city alone is mentioned; in all the others, Plato's standard opposition city individual replaces that of city human race. But even in the immediate continuation of the passage under consideration, in Republic, 473e, the same standard opposition is used in what looks like an explanation or a paraphrase of the questionable expression: 'no other constitution can establish happiness neither in private affairs nor in those of the city'. Nowhere is there a further allusion to the allegedly Platonic idea that sophocracy alone can save, not only the suffering cities, but all suffering mankind. In
view of all this it seems
clear that in all these places only his standard
opposition lingered in Platb's
mind (without, however, the wish to give it any
prominence in this connection),
probably in the sense that on sophocracy depends the
happiness of any state,
as well as that of all its individual citizens and
their progeny (in which otherwise
evil must grow).

(2) Plato uses the term 'man' or 'human' regularly
in a naturalistic
or biological sense (in opposition to animals, e.g. to
eagles; or to deities),
and without any humanitarian implication; that is to
say, nowhere do these
terms indicate that they are used to express something
that transcends the
distinctions of nation, race, or class. (Fichte's views
quoted in chapter 12,
text to note 79, are a pointed expression of such a use
of the terms.) A
number of Platonic passages indicating this
anthropological (as opposed to
humanitarian) usage are: Phaedo, 8ab; Republic,
459b/c, faob. Cratylus,
392b; Parmenides, 1346; Theaetetus, io7b; Laws,
688d, 737b. Crito, 466;
Protagoras, 344C. Republic, 5i4b; 522C. Laws, Sgob, is
even an example of
a disparaging use.

(3) It is of course true that Plato assumes a Form or
Idea of Man; but
it is a mistake to think that it represents what all
men have in common;
rather, it is an aristocratic ideal of a proud Super-
Greek; and on this is based
a belief, not in the brotherhood of men, but in a
hierarchy of 'natures',
aristocratic or slavish, in accordance with their
greater or lesser likeness to
the original, the ancient primogenitor of the human
race. (The Greeks are
more like him than any other race.) Thus 'intelligence
is shared by the gods
with only a very few men' (Tim., 5ie; cp. Aristotle,
in the text to note 3,
chapter n). (4) The *City in Heaven* (Rep., 5920) and its citizens are, as Adam rightly points out, not Greek; but this does not imply that they belong to 'humanity' as he thinks (note to 470630, and others); they are rather super-exclusive, super-Greek (they are 'above' the Greek city of 4706, ff.) more remote from the barbarians than ever. (5) Finally, it may be mentioned that the passage 499c/d rescinds the distinction between Greeks and barbarians no more than that between the past, the present, and the future: Plato tries here to give drastic expression to a sweeping generalization in regard to time and space; he wishes to say no more than: *If at any time whatever, or if at any place whatever' (we may add: even in such an

CHAPTER 8/NOTES 51-53 239

extremely unlikely place as a barbarian country) 'such a thing did happen, then... The remark Republic, 494c/d expresses a similar, though stronger, feeling of being faced with something approaching impious absurdity, a feeling here aroused by Alcibiades' hopes for a universal empire of Greeks and foreigners. (I agree with Field, Plato and His Contemporaries^ 130, note i, and Tarn, cp. note 13 (2) to chapter' 5!)

To sum up, I am unable to find anything but hostility towards the humanitarian ideas of a unity of mankind which transcends race and class, and I believe that those who find the opposite idealize Plato (cp. note 3 to chapter 6, and text) and fail to see the link between his aristocratic and anti-humanitarian exclusiveness and his Theory of Ideas. See also this chapter, notes 51 and 57, below.
51 The allusion is, I believe, to two places in the Story of the Number where Plato (by speaking of * your race *) refers to the race of men: ' concerning your own race ' (5463/b; cp. note 39 to chapter 5, and text) and ' testing the metals within your races ' (546d/e, f.; cp. notes 39 and 40 to chapter 5, and the next passage). Cp. also the arguments in note 52 to this chapter, concerning a ' bridge ' between the two passages, i.e. the key passage of the philosopher king, and the story of the Number. (See also next note.)

52 Republic, 546d/e, f. The passage quoted here is part of the Story of the Number and the Fall of Man, 546a~547a, quoted in text to notes 39/40 to chapter 5; see also notes 13 and 43 to the present chapter. My contention (cp. text to the last note) that the remark in the philosopher king passage, Republic, 4730 (cp. notes 44 and 50 to this chapter) foreshadows the Story of the Number, is strengthened by the observation that there exists a bridge, as it were, between the two passages. The Story of the Number is undoubtedly foreshadowed by Republic, 5363/b, a passage which, on the other hand, may be described as the converse (and so as a variation) of the philosopher king passage; for it says, generally speaking, that the worst must happen if the wrong men are selected as rulers, and it even finishes up with a direct reminiscence of the great wave: ' if we take men of another kind . . then we shall bring down upon philosophy another deluge of laughter '. This clear reminiscence is, I believe, an indication that Plato was conscious of the character of the passage (which proceeds, as it were, from the end of 473c-e back to its beginning), which shows what must happen if the advice given in
the passage of the philosopher king is neglected. Now this 'converse'
passage (536a/b) or 'bridge' contains unambiguous
references to racialism,
foreshadowing the passage on the same subject to which
the present note is
appended. (This may be interpreted as additional
evidence that racialism
was in Plato's mind, and alluded to, when he wrote the
passage of the philo-
sopher king.) I now quote the beginning of the *
converse' passage 536a/b:
' We must distinguish carefully between the true-born
and the bastard. For
if an individual or a city does not know how to look
upon matters such as
these, they will quite innocently accept the services
of the disfigured and the
bastards in any capacity; perhaps as friends, or even
as rulers.' (Gp. also
note 47 to this chapter.)

For something like an explanation of Plato's
preoccupation with matters
of racial degeneration and racial breeding, cp. text to
notes 6, 7, and 63 to
chapter 10, in connection with note 39 (3) to chapter
5.

63 A. E. Taylor, Plato (1908, 1914), pp. 122 f. I agree
with this interesting
passage as far as it is quoted in the text. I have,
however, omitted the word
4 patriot ' after ' Athenian ' since I do not fully
agree with this characterization
of Plato. For Plato's *patriotism* cp. text to notes
14-18 to chapter 4. For
the term 'patriotism', and the 'paternal state',
cp. notes 23-26 and 45 to
chapter 10.

240 CHAPTER 8/NOTES 54-59

54 Republic, 494-b: * But will not one who is of this
type be first in every-
thing, from childhood on? '

58 Cp. what Adam says in his ed. of the Republic, notes to 495d23 and 495d31, and my note 47 to this present chapter. (See also note 59 to this chapter.)

67 Republic, 4960-*. (I do not think that Barker, Greek Political Theory I, 107, n. 2, makes a good guess when he says of the passage quoted that 'it is possible... that Plato is thinking of the Cynics'. The passage certainly does not refer to Antisthenes, and Diogenes, whom Barker must have in mind, was hardly famous when it was written, quite apart from the fact that Plato would hardly have referred to him in this way.)

Earlier in the same passage of the Republic, there is another remark which may be a reference to Plato himself. Speaking of the small band of the worthy and those who belong to it, he mentions *a nobly-born and well-bred character who was saved by flight* (or *by exile*; saved, that is, from the fate of Alcibiades who became a victim of flattery and deserted Socratic philosophy). Adam thinks (note to 49,6b9) that 'Plato was hardly exiled', but the flight to Megara of Socrates' disciples after the death of their master may well stand out in Plato's memory as one of the turning-points in his life. That the passage refers to Dio is hardly possible since Dio was well beyond the critical youthful age when he was exiled, and there was not (as in Plato's case) a parallelism with the Socratic companion Alcibiades (quite apart from the fact that Plato had resisted Dio's banishment, and had tried to get it rescinded). If we assume that the passage refers to Plato, then we shall have to assume the same of 502a: *Who will doubt the possibility that kings
or aristocrats may have a descendant who is a born philosopher?'; for the continuation of that passage is so similar to the previous that they seem to refer to the same 'nobly-born character'. This interpretation of 5023 is probable in itself, for we must remember that Plato, who always showed his family pride, for instance, in the eulogy on his father and on his brothers, whom he calls *divine* (Rep., 368a; I cannot agree with Adam who takes the remark as ironical; cp. also the remark on Plato's alleged ancestor Godrus in Symp., 208d) claimed descent from Attica's tribal kings. If this interpretation is adopted, the reference to sons of aristocratic and kingly families in 499b would have to be considered in the same light, i.e. as a preparation for 5023. But this would solve another puzzle. I have in mind 49gb and 502a. It is difficult, if not impossible, to interpret these passages as attempts to flatter the younger Dionysius, since such an interpretation could hardly be reconciled with the unmitigated violence and the admittedly (576a) personal background of Plato's attacks (572-580) upon the older Dionysius. It is important to note that Plato speaks in all three passages (473d, 499b, 502a) about hereditary kingdoms (which he opposes so strongly to tyrannies) and about *dynasties*; but we know from Aristotle's Politics, I292b2 (cp. Meyer, Gesch. d. Altertums, V, p. 56) and i293ai i, that 'dynasties' are hereditary oligarchic families, and therefore not so much the families of a tyrant like Dionysius, but rather what we call now aristocratic families, like that of Plato himself. (These arguments are directed against Adam's second note to 499bi3. Aristotle's statement is supported by Thucydides, IV, 78, and Xenophon, Hellenica, V, 4, 46.)

68 In a famous passage in the Phaedo (8gd) Socrates
warns against misanthropy or hatred of men (with which he compares misology or distrust in rational argument). See also note 28 and 56 to chapter 10, and note 9 to chapter 7.

68 Republic, 489b/c. The connection with the previous passages is more obvious if the whole of 488 and 489 is considered, and especially the attack in

CHAPTER g/NOTES 1-2 241

4896 upon the ' many ' philosophers whose wickedness is inevitable, i.e. the same ' many * and * incomplete natures * whose suppression is discussed in notes 44 and 47 to this chapter.

An indication that Plato had once dreamt of becoming the philosopher king and saviour of Athens can be found, I believe, in the Laws, 7043-707^ where Plato tries to point out the moral dangers of the sea, of seafaring, trade, and imperialism. (Cp. Aristotle, Pol., 13260-13273, and my notes g to 22 and 36 to chapter 10, and text.)

See especially Laws, 704d : ' If the city were to be built on the coast, and well supplied with natural harbours . . then it would need a mighty saviour, and indeed, a super-human legislator, to make her escape variability and degeneration.* Does this not read as if Plato wanted to show that his failure in Athens was due to the super-human difficulties created by the geography of the place ? (But Plato still believes in the method of winning over a tyrant ; cp. Laws, 71oc/d, quoted in text to note 24 to chapter 4.)

60 Such dreams have sometimes been even openly confessed. F. Nietzsche,
The Will to Power (ed. 1911, Book IV, Aphor. 958) writes: "In Plato's Theages is written: "Every one of us wants to be the lord of all men, if it were only possible and most of all he would like to be the Lord Himself." This is the spirit which must come again.' I need not comment upon Nietzsche's political views; but there are other philosophers, Platonists, who have naively hinted that if a Platonist were, by some lucky accident, to gain power in a modern state, he would move towards the Platonic Ideal, and leave things at least nearer perfection than he found them. The argument in the next chapter is directed partly against such romantic dreams.

61 Op. cit., 52oa~52ic, the quotation is from 52od.

NOTES TO CHAPTER 9

1 My description of Utopian social engineering seems to coincide with that kind of social engineering advocated by M. Eastman in Marxism Is it Science?; see especially pp. 22 f. I have the impression that Eastman's views represent the swing of the pendulum from historicism to Utopian engineering. But I may possibly be mistaken, and what Eastman really has in mind may be more in the direction of what I call piecemeal engineering; cp. note 9 to chapter 3. See also note 18 (3) to chapter 5.

2 I believe that there is, from the ethical point of view, no symmetry between suffering and happiness, or between pain and pleasure. Both the Utilitarians and Kant (* Promote other people's happiness . . .' ) seem to me (at least in their formulations) fundamentally wrong in this point, which is,
however, not one for rational argument (for the irrational aspect of ethical beliefs, see note 11 to the present chapter, and chapter 24) . In my opinion (cp. note 6 (2) to chapter 5) human suffering makes a direct moral appeal, namely, the appeal for help, while there is no similar call to increase the happiness of a man who is doing well anyway. (A further criticism of Utilitarianism would be that pain cannot be outweighed by pleasure, and especially not one man's pain by another man's pleasure. Instead of the greatest happiness of the greatest number, one should more modestly demand the least amount of suffering for anybody; and further, that unavoidable suffering should be distributed as equally as possible.) I find that there is some kind of analogy between this view of ethics and the view of scientific methodology which I have advocated in my Logik der Forschung. Just as in the field of ethics it is much clearer to formulate our demands negatively, i.e., to demand the elimination of suffering rather than the promotion of happiness, so it is clearer to formulate the task of scientific method as the elimination of false theories (from the various theories tentatively proffered) rather than the attainment of established truths.

3 A very good example of this kind of piecemeal engineering, or perhaps of the corresponding piecemeal technology, are G. G. F. Sinkin's two articles on *Budgetary Reform* 'in the Australian Economic Record (1941, pp. 192 fF., and 1942, pp. 16 fF.) I am glad to be able to refer to these two articles since they make conscious use of the methodological principle which I advocate;
they thus show that these principles are useful in the practice of technological research.

I do not suggest that piecemeal engineering cannot be bold, or that it must be confined to 'smallish' problems. But I think that the degree of complication which we can tackle is governed by the degree of our experience gained in conscious and systematic piecemeal engineering.

4 This view has recently been emphasized by F. A. von Hayek in various interesting papers (cp. for instance his Freedom and the Economic System, Public Policy Pamphlets, Chicago 1939). What I call 'Utopian engineering' corresponds largely, I believe, to what Hayek would call 'centralized' or 'collectivist' planning. Hayek himself recommends what he calls *planning for freedom*. I suppose he would agree that this would take the character of 'piecemeal engineering'. One could, I believe, formulate Hayek's objections to collectivist planning somewhat like this. If we try to construct society according to a blueprint, then we may find that we cannot incorporate individual freedom in our blueprint; or if we do, that we cannot realize it. The reason is that centralized economic planning eliminates from economic life one of the most important functions of the individual, namely his function as a chooser of the product, as a free consumer. In other words, Hayek's criticism belongs to the realm of social technology. He points out a certain technological impossibility, namely that of drafting a plan for a society which is at once economically centralized and individualistic.

6 Cp. note 25 to chapter 7.

6 The question whether the end may justify the means
seems to arise from
a kind of intuition of a happy result, reached through
suffering. The idea
seems to be that the question is largely one of
whether the sufferings were
worth while, i.e. justifiable by the result. But we
ought to consider the situa-
tion altogether differently. The question whether a
certain action is justified
depends upon the sum total of all the results which we
can foresee. The
immediate ' end ' or ' aim ' is usually only one part
of these total results,
and if other parts are undesirable then the question is
whether they are
balanced by the desired ' end '. In other words, we
have not to balance
the past (means) against the future (ends) but some
parts of the total results
against other parts. (The ' total results ' will of
course be spread over a
certain period of time, and the original ' end ' need
not be the last of them.)

7 (i) I believe that the parallelism between the
institutional problems of
civil and of international peace is most important. Any
international organiza-
tion which has legislative, administrative and judicial
institutions as well as an
armed executive which is prepared to act should be as
successful in upholding
international peace as are the analogous institutions
within the state. But
it seems to me important not to expect more. We have
been able to reduce
crime within the states to something comparatively
unimportant, but we have
not been able to stamp it out entirely. Therefore we
shall, for a long time to
come, need a police force which is ready to strike, and
which sometimes
does strike. Similarly, I believe that we must be
prepared for the probability
that we may not be able to stamp out international
crime. If we declare
that our aim is to make war impossible once and for
all, then we may under-
take too much, with the fatal result that we may not
have a force which is

CHAPTER g/NOTE J

ready to strike when these hopes are disappointed. (The failure of the League of Nations to take action against aggressors was, at least in the case of the attack on Manchukuo, due largely to the general feeling that the League had been established in order to end all wars and not to wage them. This shows that propaganda for ending all wars is self-defeating. We must end international anarchy, and be ready to go to war against any international crime. (Cp. especially H. Mannheim, War and Crime, 1941; and A. D. Lindsay, *War to End War*, in Background and Issues, 1940.)

But it is also important to search for the weak spot in the analogy between civil and international peace, that is to say, for the point where the analogy breaks down. In the case of civil peace, upheld by the state, there is the individual citizen to be protected by the state. The citizen is, as it were, a 'natural' unit or atom (although there is a certain 'conventional' element even in the conditions of citizenship). On the other hand, the members or units or atoms of our international order will be states. But a state can never be a 'natural' unit like the citizen; there are no natural boundaries to a state. The boundaries of a state change, and can be defined only by applying the principle of a status quo; and since every status quo must refer to an arbitrarily chosen date, the determination of the boundaries of a state is purely conventional.

The attempt to find some natural 'boundaries for states, and accordingly, to look upon the state as a *natural* unit, leads to
the principle of the national state and to the romantic fictions of nationalism, racialism, and tribalism. But this principle is not 'natural', and the idea that there exist natural units like nations or linguistic or racial groups, is entirely fictitious. Here, if anywhere, we should learn from history; for since the dawn of history, men have been continually mixed, unified, broken up, and mixed again; and this cannot be undone, even if it were desirable.

There is a second point in which the analogy between civil and international peace breaks down. The state must protect the individual citizen, its units or atoms; but the international organization also must ultimately protect human individuals, and not its units or atoms, i.e., states or nations.

The complete renunciation of the principle of the national state (a principle which owes its popularity solely to the fact that it appeals to tribal instincts, and that it is the cheapest and surest method by which a politician who has nothing better to offer can make his way), and the recognition of the necessarily conventional demarcation of all states, together with the further insight that human individuals and not states or nations must be the ultimate concern even of international organizations, will help us to realize clearly, and to get over, the difficulties arising from the breakdown of our fundamental analogy. (Cp. also chapter 12, notes 51-64 and text, and note 2 to chapter 13.)

(2) It seems to me that the remark that human individuals must be recognized to be the ultimate concern not only of international organizations, but of all politics, international as well as *national* or parochial, has important applications. We must realize that we can treat individuals fairly, even if
we decide to break up the power-organization of an aggressive state or 'nation' to which these individuals belong. It is a widely held prejudice that the destruction and control of the military, political and even of the economic power of a state or 'nation' implies misery or subjugation for its individual citizens. But this prejudice is as unwarranted as it is dangerous.

It is unwarranted provided that an international organization protects the citizens of the so weakened state against exploitation of their political and military weakness. The only damage to the individual citizen that cannot be avoided is one to his national pride; and if we assume that he was a citizen of an aggressor country, then this is a damage which will be unavoidable in any case, provided the aggression has been warded off.

244 CHAPTER g/NOTE J

The prejudice that we cannot distinguish between the treatment of a state and of its individual citizens is also very dangerous, for when it comes to the problem of dealing with an aggressor country, it necessarily creates two factions in the victorious countries, viz., the faction of those who demand harsh treatment and those who demand leniency. As a rule, both overlook the possibility of treating a state harshly, and, at the same time, its citizens leniently.

But if this possibility is overlooked, then the following is likely to happen. Immediately after the victory the aggressor state and its citizens will be treated comparatively harshly. But the state, the power-organization, will probably not be treated as harshly as might be reasonable
because of a reluctance to
treat innocent individuals harshly, that is to say,
because the influence of
the faction of leniency will make itself felt somehow.
In spite of this reluc-
tance, it is likely that individuals will suffer beyond
what they deserve. After
a short time, therefore, a reaction is likely to occur
in the victorious countries.
But jutilitarian and humanitarian tendencies are likely to
strengthen the faction
of leniency until the harsh policy is reversed. But
this development is not
only likely to give the aggressor state a chance for a
new aggression; it will
also provide it with the weapon of the moral
indignation of one who has been
wronged, while the victorious countries are likely to
become afflicted with the
diffidence of those who feel that they may have done
wrong.

This very undesirable development must in the end lead
to a new aggres-
sion. It can be avoided if, and only if, from the
start, a clear distinction is
made between the aggressor state (and those responsible
for its acts) on the
one hand, and its citizens on the other hand. Harshness
towards the aggressor
state and even the radical destruction of its power
apparatus, will not produce
this moral reaction of humanitarian feelings in the
victorious countries if it
is combined with a policy of fairness towards the
individual citizens.

But is it possible to break the political power of a
state without injuring
its citizens indiscriminately? In order to prove that
this is possible I shall
construct an example of a policy which breaks the
political and military power
of an aggressor state without violating the interests
of its individual citizens.

The fringe of the aggressor country, including its sea-
coast and its main
(not all) sources of water power, coal, and steel,
could be severed from the
state, and administered as an international territory, never to be returned.
Harbours as well as the raw materials could be made accessible to the citizens
of the state for their legitimate economic activities, without imposing any
economic disadvantages on them, on the condition that they invite international
commissions to control the proper use of these facilities. Any use which
may help to build up a new war potential is forbidden, and if there is reason
for suspicion that the internationalized facilities and raw materials may be so
used, their use has at once to be stopped. It then rests with the suspect party
to invite and to facilitate a thorough investigation and to offer satisfactory
guarantees for a proper use.

Such a procedure would not eliminate the possibility of a new attack
but it would force the aggressor state to make its attack on the internationalized
territories previous to building up a new war potential. Thus such an attack
would be hopeless provided the other countries have retained and developed
their war potential. Faced with this situation the former aggressor state
would be forced to change its attitude radically, and adopt one of co-operation.
It would be forced to invite the international control of its industry and to
facilitate the investigation of the international controlling authority (instead
of obstructing them) because only such an attitude would guarantee its use
of the facilities needed by its industries; and such a development would be
likely to take place without any further interference with the internal politics
of the state.
The danger that the internationalization of these facilities might be misused for the purpose of exploiting or of humiliating the population of the defeated country can be counter-acted by international legal measures that provide for courts of appeal, etc.

This example shows that it is not impossible to treat a state harshly and its citizens leniently.

(3) But is such an engineering approach towards the problem of peace scientific? Many will contend, I am sure, that a truly scientific attitude towards the problems of war and peace must be different. They will say that we must first study the causes of war. We must study the forces that lead to war, and also those that may lead to peace. It has been recently claimed, for instance, that "lasting peace" can come only if we consider fully the "underlying dynamic forces" in society that may produce war or peace. In order to find out these forces, we must, of course, study history. In other words, we must approach the problem of peace by a historicist method, and not by a technological method. This, it is claimed, is the only scientific approach.

The historicist may, with the help of history, show that the causes of war can be found in the clash of economic interests; or in the clash of classes; or of ideologies, for instance, freedom versus tyranny; or in the clash of races, or of nations, or of imperialisms, or of militarist systems; or in hate; or in fear; or in envy; or in the wish to take revenge; or in all these things together, and in countless more. And he will thereby show that the task of removing these causes is extremely difficult. And he will show that there is no point in constructing an international
organization, as long as we have not removed the causes of war, for instance the economic causes, etc.

I think that this important problem may be used to show the poverty of historicism, and indeed, its harmfulness. For this apparently unprejudiced and convincingly scientific approach, the study of the 'causes of war' is, in fact, not only prejudiced, but also liable to bar the way to a reasonable solution; it is, in fact, pseudo-scientific.

How far would we get if, instead of introducing laws and a police force, we approached the problem of criminality *scientifically*, i.e. by trying to find out what precisely are the causes of crime? I do not imply that we cannot here or there discover important factors contributing to crime or to war, and that we cannot avert much harm in this way; but this can well be done after we have got crime under control, i.e. after we have introduced our police force. On the other hand, the study of economic, psychological, hereditary, moral, etc., 'causes' of crime, and the attempt to remove these causes, would hardly have led us to find out that a police force (which does not remove the cause) can bring crime under control. Quite apart from the vagueness of such phrases as 'the cause of war', the whole approach is anything but scientific. It is as if one insisted that it is unscientific to wear an overcoat when it is cold; and that we should rather study the causes of cold weather, and remove them. Or, perhaps, that lubricating is unscientific, since we should rather find out the causes of friction and remove them. This latter example shows, I believe, the absurdity of the apparently scientific criticism; for just as lubrication certainly reduces the *causes* of friction, so an international police force (or another armed body of
this kind) may reduce
an important ' cause ' of war, namely the hope of '
getting away with it '.

8 I have tried to show this in my Logik der Forschung. I believe, in accordance with the methodology outlined, that systematic piecemeal engineering will help us to build up an empirical social technology, arrived at by the method of trial and error. Only in this way, I believe, can we begin to build up an empirical social science. The fact that such a social science hardly exists so far, and that the historical method is incapable of furthering it much,

246 CHAPTER IO/NOTES 1-6

is one of the strongest arguments against the possibility of large-scale or Utopian social engineering. See also my Poverty of Historicism (Economics, 1944-45).

9 J. A. Stewart has treated this aspect of the Theory of Ideas in his book Plato's Doctrine of Ideas (1909), 128 ff. I believe, however, that he stresses too much the object of pure contemplation (as opposed to that ' pattern ' which the artist not only visualizes, but which he labours to reproduce, on his canvas).

10 Republic, 520c.

11 It has often been said that ethics is only a part of aesthetics, since ethical questions are ultimately a matter of taste. (Gp. for instance G. E. G. Catlin, The Science and Methods of Politics, 315 ff.) If by saying this, no more is meant than that ethical problems cannot be solved by scientific methods, I agree. But we must not overlook the vast difference between moral ' problems of
taste *, and problems of taste in aesthetics. If I dislike a novel, a piece of music, or perhaps a picture, I need not read it, or listen to it, or look at it. Esthetic problems (with the possible exception of architecture) are largely of a private character, but ethical problems concern men, and their lives. To this extent, there is a fundamental difference between them.

12 For this and the following quotations, cp. Republic, 500d~501a (italics mine); cp. also notes 25, 26, 37, 38 (especially 25 and 38) to chapter 8.

13 Cp. for this development also chapter 13, especially note 7, and text.

14 It seems that romanticism, in literature as well as in philosophy, may be traced back to Plato. It is well known that Rousseau was directly influenced by him (cp. note i to chapter 6). Rousseau also knew Plato's Statesman (cp. the Social Contract, Book II, ch. VII, and Book III, ch. VI) with its eulogy of the early hill-shepherds. But apart from this direct influence, it is probable that Rousseau derived his pastoral romanticism and* love for primitivity indirectly from Plato; for he was certainly influenced by the Italian Renaissance, which had rediscovered Plato, and especially his naturalism and his dreams of a perfect society of primitive shepherds (cp. notes 11 (3) and 32 to chapter 4 and note i to chapter 6). It is interesting that Voltaire recognized at once the dangers of Rousseau's romantic obscurantism; just as Kant was not prevented by his admiration for Rousseau from recognizing this danger when he was faced with it in Herder's * Ideas ' (cp. also note 56 to chapter 12, and text).

NOTES TO CHAPTER 10
1 Cp. Republic, 41a ff., 42 ib, 4650 ff., and 5196.

2 I am thinking not only of the medieval attempts to arrest society, attempts that were based on the Platonic theory that the rulers are responsible for the spiritual welfare of the ruled, and on many practical devices developed by Plato in the Republic and in the Laws; I think also of many later developments.

3 I have tried, in other words, to apply as far as possible the method which I have described in my Logik der Forschung.

4 Cp. especially Republic, 5666; see also below, note 63 to this chapter.

5 In my story there should be 'no villains'. Crime is not interesting. It is what men do at their best, with good intentions. that really concerns us'. I have tried as far as possible to apply this methodological principle to my interpretation of Plato. (The formulation of the principle quoted in this note I have taken from G. B. Shaw's Preface to Saint Joan; see the first sentences in the section 'Tragedy, not Melodrama'.)

6 For the terms '*closed society*' and '*open society*', and their use in a somewhat similar sense by Bergson, see the Note to the Introduction. My characterization of the closed society as magical and of the open society as rational and critical of course makes it impossible to apply these terms without idealizing the society in question. The magical attitude has by no means disappeared from our life, not even in the most '*open*' societies so far realized, and I think it unlikely that it can ever completely disappear. In spite of this, it
seems to be possible to give some useful criterion of the transition from the closed society to the open. The transition takes place when social institutions are first consciously recognized as man-made, and when their conscious alteration is discussed in terms of their suitability for the achievement of human aims or purposes. Or, putting the matter in a less abstract way, the closed society breaks down when the supernatural awe with which the social order is considered gives way to active interference, and to the conscious pursuit of personal or group interests. It is clear that cultural contact through civilization may engender such a breakdown, and even more the development of an impoverished, i.e. landless section of the ruling class. I may mention here that I do not like to speak of 'social breakdown' in a general way. I think that the breakdown of a closed society, as described here, is a fairly clear affair, but in general the term 'social breakdown' seems to me to convey very little more than that the observer does not like the course of the development he describes. I think that the term is much misused. But I admit that, with or without reason, the member of a certain society might have the feeling that 'everything is breaking down.' There is little doubt that to the members of the ancient regime or of the Russian nobility, the French or the Russian revolution must have appeared as a complete social breakdown; but to the new rulers it appeared very differently.

Toynbee (cp. A Study of History, V, 23-35; 338) describes the appearance of schism in the body social 'as a criterion of a society which has broken down. Since schism, in the form of class disunion, undoubtedly occurred in Greek society long before the Peloponnesian war, it is not quite clear why he holds that this war (and not the breakdown of
tribalism) marks what he describes as the breakdown of Hellenic civilization. (Gp. also notes 45 (2) to chapter 4, and note 8 to the present chapter.)

Concerning the similarity between the Greeks and the Maoris, some remarks can be found in Burnet's Early Greek Philosophy 2, especially pp. 2 and 9.

7 I owe this criticism of the organic theory of the state, together with many other suggestions, to J. Popper-Lynkeus; he writes (Die allgemeine Ndhrpflicht, 2nd ed., 1923, pp. 71 f.): 'The excellent Menenius Agrippa . . persuaded the insurgent plebs to return' (to Rome) * by telling them his simile of the body's members who rebelled against the belly. . . Why did not one of them say: "Right, Agrippa! If there must be a belly, then we, the plebs, want to be the belly from now on; and you . . may play the r6le of the members!" (For the simile, cp. Shakespeare's Coriolanus, Act i, Scene i.) It is perhaps interesting to note that even a modern and apparently progressive movement like 'Mass-Observation' makes propaganda for the organic theory of society (on the cover of its pamphlet, First Tear's Work, 1937-38.)

On the other hand, it must be admitted that the tribal 'closed society' has something like an 'organic' character, just because of the absence of social tension. The fact that such a society (as that of the Greeks) is based on slavery does not create in itself a social tension, because the slaves are no more part of society than the cattle; their aspirations and problems do not create anything that is felt by the rulers as a problem within society. Population growth, however, does create such a problem.
In Sparta, which

did not send out colonies, it led first to the
subjugation of neighbouring tribes
for the sake of winning their territory, and then to a
conscious effort to arrest
all change by measures that included the control of
population increase by

248 CHAPTER ID/NOTES 8-15

the institution of infanticide, birth control, and
homosexuality. (Gp. also
note 34 to chapter 4 ; furthermore 63 to chapter 10,
and 39 (3) to chapter 5.)

8 I suppose that what I call the * strain of
civilization ' is similar to the
phenomenon which Freud had in mind when writing
Civilization and its
Discontents. Toynbee speaks of a Sense of Drift (A
Study of History, V, 412 ff.),
but he confines it to ' ages of disintegration ', while
I find my strain very
clearly expressed in Heraclitus (in fact, traces can be
found in Hesiod) long
before the time at which, according to Toynbee, his ' Hellenic society ' begins
to ' disintegrate '. When Meyer describes the
disappearance of ' The status
of birth, which had determined every man's place in
life, his civil and social
rights and duties, together with the security of
earning his living ' (Geschichte
des Altertums, III, 542), he gives an apt description
of the strain in Greek
society of the fifth century B.C.

9 Another profession of this kind which led to
comparative intellectual
independence, was that of a wandering bard. I am
thinking here mainly
of Xenophanes, the progressivist ; cp. note 7, the
paragraph on ' Protagoreanism ', to chapter 5. (Homer also may be a case in
point.) It is clear
that this profession was accessible to very few men.
I happen to have no personal interest in matters of commerce, or in commercially minded people. But the influence of commercial initiative seems to me rather important. It is hardly an accident that the oldest known civilization, that of Sumer, was, as far as we know, a commercial civilization with strong democratic features; and that the arts of writing and arithmetic, and the beginnings of science, were closely connected with its commercial life. (Gp. also text to note 24 to this chapter.)

10 Thucydides, I, 93 (I mostly follow Jowett's translation). For the problem of Thucydides' bias, cp. note 15 (i) to this chapter.

11 This and the next quotation: op. cit. 9 I, 107. Thucydides' story of the treacherous oligarchs can hardly be recognized in Meyer's apologetic version (Gesch. d. Altertums, III, 594), in spite of the fact that he has no better sources; it is simply distorted beyond recognition. (For Meyer's partiality, see note 15 (2) to the present chapter.) For a similar treachery (in 479 B.C., on the eve of Plataea) cp. Plutarch's Aristides, 13.

18 Thucydides' III, 82-84. The following conclusion of the passage is characteristic of the element of individualism and humanitarianism present in Thucydides, a member of the Great Generation (see below, and note 27 to this chapter) and, as mentioned above, a moderate: 'When men take revenge, they are reckless; they do not consider the future, and do not hesitate to annul those common laws of humanity on which every individual must rely for his own deliverance should he ever be overtaken by calamity; they forget that in their own hour of need they will look for them in vain.' For a further discussion of Thucydides' bias see note 15 (i) to this chapter.
18 Aristotle, Politics, VIII, (V), 9, 10/11; i31oa. Aristotle does not agree with such open hostility; he thinks it wiser that 'true Oligarchs should affect to be advocates of the people's cause'; and he is anxious to give them good advice: 'They should take, or they should at least pretend to take, the opposite line, by including in their oath the pledge: I shall do no harm to the people.'

14 Thucydides, II, 9.

(i) In order to judge Thucydides' apparent impartiality, or rather, his involuntary bias, one must compare his treatment of the most important affair of Plataea which marked the outbreak of the first part of the Peloponnesian war (Meyer, following Lysias, calls this part the Archidamian war; cp. Meyer, Gesch. d. Altertums, IV, 307, and V, p. VII) with his treatment of the Melian affair, Athens' first aggressive move in the second part (the war of Alcibiades). The Archidamian war broke out with an attack on democratic Plataea a lightning attack made without declaration of war by Thebes, a partner of totalitarian Sparta, whose Plataean friends, the oligarchic fifth column, had by night opened the doors of Plataea to the enemy. Though most important as the immediate cause of the war, the incident is comparatively briefly related by Thucydides (II, 1-7); he does not comment upon the moral aspect, apart from calling *the affair of Plataea a glaring violation of the thirty years truce*; but he censures (II, 5) the
democrats of Plataea for their harsh treatment of the invaders, and even expresses doubts whether they did not break an oath. This method of presentation contrasts strongly with the famous and most elaborate, though of course fictitious, Melian Dialogue (Thuc., V, 85-113) in which Thucydides tries to brand Athenian imperialism. Shocking as the Melian affair seems to have been (Alcibiades may have been responsible; cp. Plutarch, Ale., 16), the Athenians did not attack without warning, and tried to negotiate before using force.

(2) E. Meyer is one of the greatest modern authorities on this period. But to appreciate his point of view one must read the following scornful remarks on democratic governments (there are a great many passages of this kind): 'Much more important' (viz., than to arm) * was it to continue the entertaining game of party-quarrels, and to secure unlimited freedom, as interpreted by everybody according to his particular interests.' (V, 61.) But is it more, I ask, than an 'interpretation according to his particular interests' when Meyer writes: 'The wonderful freedom of democracy, and of her leaders, have manifestly proved their inefficiency.' (V, 69.) About the Athenian democratic leaders who in 403 B.C. refused to surrender to Sparta (and whose refusal was later even justified by success although no such justification is necessary), Meyer says: * Some of these leaders might have been honest fanatics; . . . they might have been so utterly incapable of any sound judgement that they really believed * that Athens must never capitulate.' (IV, 659.) Meyer censures other historians in the strongest terms for being biased. (Cp. e.g. the notes in V, 89 and 102, where he defends the tyrant Dionysius I
against allegedly biassed attacks, and 113 bottom to 114 top, where he is also exasperated by some anti-Dionysian * parroting historians '. Thus he calls Grote ' an English radical leader ', and his work * not a history, but an apology for Athens ', and he proudly contrasts himself with such men : ' It will hardly be possible to deny that we have become more impartial in questions of politics, and that we have arrived thereby at a more correct and more embracing historical judgement.' (All this in III, 239.)

Behind Meyer's point of view stands Hegel. This explains everything (as will be clear, I hope, to the readers of chapter 12). Meyer's Hegelianism becomes obvious in the following remark, which is an unconscious but nearly literal quotation from Hegel ; it is in III, 256, when Meyer speaks of a * flat and moralizing evaluation, which judges great political undertakings with the yardstick of civil morality ' (Hegel speaks of the litany of private virtues '), ' ignoring the deeper, the truly moral factors of the state, and of historical responsibilities '. (This corresponds exactly to the passages from Hegel quoted in chapter 12, below ; cp. note 75 to chapter 12.) I wish to use this opportunity once more to make it clear that I do not pretend to be impartial in my historical judgement. Of course I do what I can to ascertain the relevant facts. But I am aware that my evaluations (as anybody else's) must depend entirely on my point of view. This I admit, although I fully believe in my point of view, i.e., that my evaluations are right.

1f Cp. Meyer, op. cit. 9 IV, 367.

18 It must however be kept in mind that, as the
reactionaries complained,
O.S.I.E. VOL. I i

250 CHAPTER JO/NOTES IQ-25

slavery was in Athens on the verge of dissolution. Cp. the evidence mentioned in notes 17, 18 and 29 to chapter 4; furthermore, notes 13 to chapter 5, 48 to chapter 8, and 27-37 to the present chapter.

Meyer comments upon this move of the Athenian democrats: "Now when it was too late they made a move towards a political constitution which later helped Rome . . to lay the foundations of its greatness." In other words, instead of crediting the Athenians with a constitutional invention of the first order, he reproaches them; and the credit goes to Rome, whose conservatism is more to Meyer's taste.

The incident in Roman history to which Meyer alludes is Rome's alliance, or federation, with Gabii. But immediately before, and on the very page on which Meyer describes this federation (in V, 135) we can read also: "All these towns, when incorporated with Rome, lost their existence . . without even receiving a political organization of the type of Attica's "demes"." A little later, in V, 147, Gabii is again referred to, and Rome in her generous * liberality ' again contrasted with Athens; but at the end of the same page, and at the beginning of the next, Meyer reports without criticism Rome's looting and destruction of the great city of Veii.

The worst of all these Roman destructions is perhaps that of Carthage. It took place at a moment when Carthage was no longer a
danger to Rome, and it robbed Rome, and us, of most valuable contributions which Carthage could have made to civilization. I only mention the great treasures of geographical information which were destroyed there. (The story of the decline of Carthage is not unlike that of the fall of Athens in 404 B.C., discussed in this chapter below; see note 48. The oligarchs of Carthage preferred the fall of their city to the victory of democracy.)

Later, under the influence of Stoicism, derived indirectly from Antisthenes, Rome began to develop a very liberal and humanitarian outlook. It reached the height of this development in those centuries of peace after Augustus (cp. for instance Toynbee, A Study of History, V, 343-346), but it is here that some romantic historians see the beginning of her decline.

Regarding this decline itself, it is, of course, equally romantic and even silly to believe, as many still do, that it was due to the degeneration caused by long-continued peace, or to demoralization, or to the superiority of the younger barbarian peoples, etc.; in brief, to overfeeding. (Cp. note 45 (3) to chapter 4.) Apart from the devastating result of violent epidemics (cp. H. Zinsser, Rats, Lice, and History, 1937, 131 ff.) the unchecked and progressive exhaustion of the soil, and with it a breakdown of the agricultural basis of the Roman economic system (cp. V. G. Simkhovitch, *Hay and History*, and *Rome's Fall Reconsidered*, in Towards the Understanding of Jesus, 1927) seem to have been one of the main causes. Cp. also W. Hegemann, Entlarvte Geschichte (1934).

20 Thucydides, VII, 28; cp. Meyer, op. cit., IV, 535. The remark that *this would yield more*, enables us, of course, to
fix an upper limit for the ratio between the taxes previously imposed and the volume of trade.

21 This is an allusion to a grim little pun which I owe to P. Milford: 'A Plutocracy is preferable to a Lootocracy.'

22 Plato, Republic, 42$b.

24 Op. cit., V, 27. Cp. also note 9 to this chapter, and text to note 30 to chapter 4.

25 This is admitted by Meyer (op. cit., IV, 433 f.), who in a very interesting passage says of the two parties: 'each of them claims that it defends "the paternal state" . . ., and that the opponent is infected with the modern spirit of selfishness and revolutionary violence. In reality, both are in-

CHAPTER IO/NOTES 26-37 25!

fected. . . The traditional customs and religion are more deeply rooted in the democratic party; its aristocratic enemies who fight under the flag of the restoration of the ancient times, are . . entirely modernized.' Cp. also op. cit., V, 4 f., 14, and the next note.

26 From Aristotle's Athenian Constitution, ch. 34, 3, we learn that the Thirty Tyrants professed at first what appeared to Aristotle a 'moderate' programme, viz., that of the *paternal state*. For the nihilism and the modernity of Gritias, cp. his theory of religion discussed in chapter 8 (see especially note 17 to that chapter) and note 48 to the present chapter.

27 It is most interesting to contrast Sophocles'
attitude towards the new faith with that of Euripides. Sophocles complains (cp. Meyer, op. cit., IV, III) : * It is wrong that . . the lowly born should flourish, while the brave and nobly born are unfortunate.' Euripides replies (with Antiphon ; cp. note 13 to chapter 5) that the distinction between the nobly and the low born (especially slaves) is merely verbal : ' The name alone brings shame upon the slave.' For the humanitarian element in Thucydides, cp. the quotation in note 12 to this chapter. For the question how far the Great Generation was connected with cosmopolitan tendencies, cp. especially note 48 to chapter 8.

28 ' Misologists ', i.e. haters of rational argument, are compared by Socrates to ' misanthropists ', the haters of men ; cp. the Phaedo, 8gc. In contrast, cp. Plato's misanthropical remark in the Republic, 496c-d (cp. notes 57 and 58 to chapter 8).

29 The quotations in this paragraph are from Democritus' fragments, Diels, Vorsokratiker 2 , fragments number 41 ; 179 ; 34 ; 261 ; 62 ; 55 ; 251 ; 247 (genuineness questioned by Diels and by Tarn, cp. note 48 to chapter 8) ; 118.

33 Herodotus' work with its pro-democratic tendency (cp., for example, III, 80) appeared about a year or two after Pericles' oration (cp. Meyer, Gesch. d. Altertums, IV, 369).
34 This has been pointed out for instance by T. Gomperz, Greek Thinkers, V, 13, 2 (Germ, ed., II, 406 f.) ; the passages in the Republic to which he draws attention are : 557d and 56 ic, ff. The similarity is undoubtedly intentional. Gp. also Adam's edition of the Republic, vol. II, 235, note to 557d26. See also the Laws, Gggd/e, if., and 704d~707d. For a similar observation regarding Herodotus III, 80, see note 17 to chapter 6.

36 Some hold the Menexenus to be spurious, but I believe that this shows only their tendency to idealize Plato. The Menexenus is vouched for by Aristotle, who quotes a remark from it as due to the 'Socrates of the Funeral Dialogue' (Rhetoric, I, 9, 30 = I367b8 ; and III, 14, u = 14^30). See also end of note 35, and note 61 to this chapter, note 19 to chapter 6, and note 48 to chapter 8.

36 The Old Oligarch's (or the Pseudo-Xenophon's) Constitution of Athens was published in 424 B.C. (according to Kirchhoff, quoted by Gomperz, Greek Thinkers, Germ, cd., I, 477). For its attribution to Critias, cp. J. E. Sandys, Aristotle's Constitution of Athens, Introduction IX, especially note 3. See also notes 18 and 48 to this chapter. For its influence upon Thucydides, cp. notes 10 and n to this chapter ; upon Plato, cp. especially note 59 to chapter 8, and Laws, joq.a-'jQ'jd. (Cp. Aristotle, Politics, I326b-i327a ; Cicero De Republica, II, 3 and 4.)

87 I am alluding to the title of M. Rader's book No Compromise The Conflict between Two Worlds (1939), an excellent criticism of the ideology of fascism.
88 Schools (especially Universities) have retained certain features of tribalism ever since. Many of them are not bad. But we must not think only of their emblems, or of the Old School Tic with all its social implications of caste, etc., but also of the patriarchal and authoritarian character of so many schools. It is not an accident that Plato, when he failed to re-establish tribalism, founded a school instead; nor is it an accident that schools have so often been bastions of reaction, and school teachers dictators in pocket edition.

As an illustration of the tribalistic character of these early schools, I give here a list of some of the taboos of the early Pythagoreans. (The list is from Burnet's Early Greek Philosophy 2, 106, who takes it from Diels, Vorsokratiker a, pp. 282 ff. Burnet speaks rightly of genuine taboos of a thoroughly primitive type'.) To abstain from beans. Not to pick up what has fallen. Not to touch a white cock. Not to break bread. Not to step over a crossbar. Not to stir the fire with iron. Not to eat from a whole loaf. Not to pluck a garland. Not to sit on a quart measure. Not to eat the heart. Not to walk on highways. Not to let the swallows share one's roof. When the pot is taken off the fire, not to leave the mark of it in the ashes, but to stir them together. Not to look in a mirror beside a light. After rising from the bedclothes, to roll them together and to smooth out the impress of the body.

39 An interesting parallelism to this development is the destruction of tribalism through the Persian conquests. This social revolution led, as Meyer points out (op. cit., vol. Ill, 167 ff.) to the emergence of a number of
prophetic, i.e. in our terminology, of historicist, religions of destiny, degeneration, and salvation, among them that of the *chosen people*, the Jews (cp. chapter i).

Some of these religions were also characterized by the doctrine that the creation of the world is not yet concluded, but still going on. This must be compared with the early Greek conception of the world as an edifice and with the Heraclitean destruction of this conception, described in chapter 2 (see note 1 to that chapter). It may be mentioned here that even Anaximander felt uneasy about the edifice. His stress upon the boundless or infinite character of the building-material expresses also a feeling that the building may possess no definite framework, that it may be in flux (cp. next note).

The development of the Dionysian and the Orphic mysteries in Greece is probably dependent upon the religious development of the east (cp. Herodotus, II, 81). Pythagoreanism, as is well known, has much in common with Orphic teaching, especially regarding the theory of the soul (see also note 44 below). But Pythagoreanism had a definitely 'aristocratic' flavour, as opposed to the Orphic teaching which represented a kind of 'proletarian' version of this movement. Meyer (op. cit., Ill, p. 428, 246) is probably right when he describes the beginnings of philosophy as a rational counter-current against the movement of the mysteries; cp. Heraclitus' attitude in these matters (fragm. 5, 14, 15; and 40, 129, Diels 2; 124-129; and 16-17, By water). He hated the mysteries and Pythagoras; the Pythagorean Plato despised the mysteries (Rep., 3646, f.; cp. however Adam's Appendix IV to Book IX of the Republic, vol. II, 378 ff., of his
40 For Anaximander (cp. the preceding note) see Diels 2, fragm. 9: 'The origin of things is the indeterminate; from where they are generated, thither they must dissolve, by necessity. For they must do penance to one another for their injustice, according to the order of time. That individual existence appeared to Anaximander as injustice, has been pointed out by Gomperz Greek Thinkers, Germ, ed., vol. I, p. 46). Note the similarity to Plato's theory of justice.

11 Parmenides was the first to seek his salvation from this strain by interpreting his dream of the arrested world as a revelation of true reality, and the world of flux in which he lived as a dream. (The real being is indivisible. It is always an integrated whole, which never breaks away from its order; 'it never disperses, and thus need not re-unite.' (D 2, fragm. 2.) For Parmenides, cp. also note 22 to chapter 3, and text.

42 Gp. note 9 to the present chapter (and note 7 to chapter 5).

44 J. Burnet, 'The Socratic Doctrine of the Soul', Proceedings of the British Academy, VIII (1915/16), 235 if. I am the more anxious to stress this partial agreement since I cannot agree with Burnet in most of his other theories, especially those that concern Socrates* relations to Plato; his opinion in
particular that Socrates is politically the more reactionary of the two (Greek Philosophy, I, 210) appears to me simply untenable. Cp. note 56 to this chapter.

Regarding the Socratic doctrine of the soul, I believe that Burnet is right in insisting that the saying 'care for your souls' is Socratic; for this saying expresses Socrates' moral interests. But I think it highly improbable that Socrates held any metaphysical theory of the soul. The theories of the Phaedo, the Republic, etc., seem to me undoubtedly Pythagorean. (For the Orphic-Pythagorean theory that the body is the tomb of the soul, cp. Adam, 'Appendix IV to Book IX of the Republic; see also note 39 to this chapter.)

And in view of Socrates' clear statement in the Apology, igc, that he had 'nothing whatever to do with speculations on nature' (see note 56 (5) to this chapter), I strongly disagree with Burnet's opinion that Socrates was a Pythagorean; and also with the opinion that he held any definite metaphysical doctrine of the 'nature' of the soul.

I believe that Socrates' saying 'care for your souls' is an expression of his moral (and intellectual) individualism. Few of his doctrines seem to be so well attested as his individualistic theory of the moral self-sufficiency of the virtuous man. (See the evidence mentioned in notes 25 to chapter 5 and 36 to chapter 6.) But this is most closely connected with the idea expressed in the sentence 'care for your souls'. In his emphasis on self-sufficiency, Socrates wished to say: They can destroy your body, but they cannot destroy your moral integrity. If the latter is your main concern, they cannot do any really serious harm to you.

It appears that Plato, when becoming acquainted with
the Pythagorean
metaphysical theory of the soul, felt that Socrates'
moral attitude needed a
metaphysical foundation, especially a theory of
survival. He therefore
substituted for 'they cannot destroy your moral
integrity' the idea of the
indestructibility of the soul. (Cp. also notes gf to
chapter 7.)

Against my interpretation, it may be contended by both
metaphysicians
and positivists that there can be no such moral and
non-metaphysical idea
of the soul as I ascribe to Socrates, since any way of
speaking of the soul must
be metaphysical. I do not think that I have much hope
of convincing
Platonic metaphysicians; but I shall attempt to show
positivists (or materialists,
etc.) that they too believe in a * soul *, in a sense
very similar to that which I
attribute to Socrates, and that most of them value that
' soul ' more highly
than the body.

First of all, even positivists may admit that we can
make a perfectly
empirical and * meaningful *, although somewhat
unprecise, distinction
between * physical * and * psychical * maladies. In
fact, this distinction is of
considerable practical importance for the organization
of hospitals, etc. (It
is quite probable that one day it may be superseded by
something more precise,
but that is a different question.) Now most of us, even
positivists, would, if
we had to choose, prefer a mild physical malady to a
mild form of insanity.
Even positivists would moreover probably prefer a
lengthy and in the end

incurable physical illness (provided it was not too
painful, etc.) to an equally
lengthy period of incurable insanity, and perhaps even to a period of curable insanity. In this way, I believe, we can say without using metaphysical terms that they care for their 'souls' more than for their '*bodies'; and this way of speaking would be quite independent of any theory they might have concerning the 'soul'; even if they should maintain that, in the last analysis, it is only part of the body, and all insanity only a physical malady, our conclusion would still hold. (It would come to something like this: that they value their brains more highly than other parts of their bodies.)

We can now proceed to a similar consideration of an idea of the 'soul' which is closer still to the Socratic idea. Many of us are prepared to undergo considerable physical hardship for the sake of purely intellectual ends. We are, for example, ready to suffer in, order to advance scientific knowledge; and also for the sake of furthering our own intellectual development, i.e. for the sake of attaining '*wisdom'. (For Socrates' intellectualism, cp. for instance the Crito, 44d/c, and 47b.) Similar things could be said of the furthering of moral ends, for instance, equalitarian justice, peace, etc. (Gp. Crito, 47e/48a, where Socrates explains that he means by 'soul' that part of us which is '*improved by justice and depraved by injustice'.) And many of us would say, with Socrates, that these things are more important to us than things like health, even though we like to be in good health. And many may even agree with Socrates that the possibility of adopting such an attitude is what makes us proud to be men, and not animals.

All this, I believe, can be said without any reference to a metaphysical theory of the (nature of the soul'). And I see no reason why we should
attribute such a theory to Socrates in the face of his clear statement that he had nothing to do with speculations of that sort.

46 In the Gorgias, which is, I believe, Socratic in parts (although the Pythagorean elements which Gomperz has noted show, I think, that it is largely Platonic; cp. note 56 to this chapter), Plato puts into the mouth of Socrates an attack on 'the ports and ship-yards and walls' of Athens, and on the tributes or taxes imposed upon her Allies. These attacks, as they stand, are certainly Plato's, which may explain why they sound very much like those of the oligarchs. But I think it quite possible that Socrates may have made similar remarks, in his anxiety to stress the things which, in his opinion, mattered most. But he would, I believe, have loathed the idea that his moral criticism could be turned into treacherous oligarchic propaganda against the open society, and especially, against its representative, Athens. (For the question of Socrates' loyalty, cp. esp. note 53 to this chapter, and text.)

46 The typical figures, in Plato's works, are Gallicles and Thrasymachus. Historically, the nearest realizations are perhaps Theramenes and Critias; Alcibiades also, whose character and deeds, however, are very hard to judge.

47 The following remarks are highly speculative and do not bear upon my arguments.

I consider it possible that the basis of the First Alcibiades is Plato's own conversion by Socrates, i.e., that Plato may in this dialogue have chosen the figure of Alcibiades to hide himself. There might have been a strong induce-ment for him to tell the story of his conversion; for Socrates, when accused
of being responsible for the misdeeds of Alcibiades, Gritias, and Charmides (see below), had referred, in his apology before the court, to Plato as a living example, and as a witness, of his true educational influence. It seems not unlikely that Plato with his urge to literary testimony felt that he had to tell the tale of Socrates' relations with himself, a tale which he could not tell in court (cp. Taylor, Socrates, note i to p. 105). By using Alcibiades' name and the special circumstances surrounding him (e.g. his ambitious political dreams which might well have been similar to those of Plato before his conversion) he would attain his apologetic purpose (cp. text to notes 49-50), showing that Socrates' moral influence in general and on Alcibiades in particular was very different from what his prosecutors maintained it to be.

I think it not unlikely that the Charmides is also, largely, a self-portrait. (It is not without interest to note that Plato himself undertook similar conversions, but as far as we can judge, in a different way; not so much by direct personal moral appeal, but rather by an institutional teaching of Pythagorean mathematics, as a pre-requisite for the dialectical intuition of the Idea of the Good. Cp. the stories of his attempted conversion of Dionysius II.) For the First Alcibiades and related problems, see also Grote's Plato, I, especially pp. 351-355.

48 Gp. Meyer, Geschichte des Altertums, V, 38, (and Xenophon's Hellenica, II, 4, 22). In the same volume, on pp. 19-23 and 36-44 (see especially p. 36) can be found all the evidence needed for justifying the interpretation given in the text. The Cambridge Ancient History (1927, vol.
V; cp. especially pp. 369 ff.) gives a very similar interpretation of the events.

It may be added that the number of full citizens killed by the Thirty during the eight months of terror approached probably 1,500, which is, as far as we know, not much less than one-tenth (probably about 8 per cent.) of the total number of full citizens left after the war, or 1 per cent, per month an achievement hardly surpassed even in our own day.

Taylor writes, of the Thirty (Socrates, Short Biographies, 1937, p. 100, note i): 'It is only fair to remember that these men probably "lost their heads" under the temptation presented by their situation. Critias had previously been known as a man of wide culture whose political leanings were decidedly democratic.' I believe that this attempt to minimize the responsibility of the puppet government, and especially of Plato's beloved uncle, must fail. We know well enough what to think of the shortlived democratic sentiments professed in those days at suitable occasions by the young aristocrats. Besides, Critias' father (cp. Meyer, vol. IV, p. 579, and Lys.y 1 2, 66), and probably Critias himself, had belonged to the oligarchy of the Four Hundred; and Critias' 5 extant writings show his treacherous pro-Spartan leanings as well as his oligarchic outlook (cp. for instance Diels a, 45) and his cynicism (cp. note 17 to chapter 8) and his ambition (cp. Diels a, 15; cp. also Xenophon's Memorabilia, I, 2, 24; and his Hellenica, II, 3, 36 and 47). But the decisive point is that he simply tried to give consistent effect to the programme of the 'Old Oligarch*, the author of the Pseudo-Xenophontic Constitution of Athens (cp. note 36 to the present chapter): to eradicate democracy; and to make a determined attempt to do so
with Spartan help, should Athens be defeated. The degree of violence used is the logical result of the situation. It does not indicate that Critias lost his head; rather, that he was very well aware of the difficulties, i.e. of the democrats' still formidable power of resistance.

Meyer, whose great sympathy for Dionysius I proves that he is at least not prejudiced against tyrants, says about Critias (op. cit., V, p. 17), after a sketch of his amazingly opportunistic political career, that 'he was just as unscrupulous as Lysander', the Spartan conqueror, and therefore the appropriate head of Lysander's puppet government.

It seems to me that there is a striking similarity between the characters of Critias, the soldier, aesthete, poet, and sceptical companion of Socrates, and of Frederick II of Prussia, called 'the Great', who also was a soldier, an aesthete, a poet, and a sceptical disciple of Voltaire, as well as one of the worst tyrants and most ruthless oppressors of modern history. (On Frederick, cp. W. Hegemann, Entlarvte Geschichte, 1934; see especially p. 90 on his attitude towards religion, reminiscent of that of Critias.)

*49 This point is very well explained by Taylor, Socrates, Short Biographies, 1937, p. 103, who follows here Burnet's note to Plato's Eutyphro, 40, 4. The only point in which I feel inclined to deviate, but only very slightly, from Taylor's excellent treatment (op. cit., 103, 120) of Socrates' trial is in the interpretation of the tendencies of the charge, especially of the charge concerning the introduction of 'novel religious practices' (op. cit., 109 and inf.).
50 Evidence to show this can be found in Taylor's Socrates, 113-115; cp. especially 115, note i, where Aeschines I, 173, is quoted: 'You put Socrates the Sophist to death because he was shown to have educated Critias.'

61 It was the policy of the Thirty to implicate as many people in their acts of terrorism as they could; cp. the excellent remarks by Taylor in Socrates, 101 f. (especially note 3 to p. 101).

52 As Grossman and others do; cp. Grossman, Plato To-Day, 91/92. I agree in this point with Taylor, Socrates, 116; see also his notes i and 2 to that page.

That the plan of the prosecution was not to make a martyr of Socrates; that the trial could have been avoided, or managed differently, had Socrates been prepared to compromise, i.e., to leave Athens, or even to promise to keep quiet, all this seems fairly clear in view of Plato's (or Socrates') allusions in the Apology as well as in the Crito. (Cp. Crito, 456 and especially 52b/c, where Socrates says that he would have been permitted to emigrate had he offered to do so at the trial.)

63 Cp. especially Crito, 530/0, where Socrates explains that, if he were to accept the opportunity for escape, he would confirm his judges in their belief; for he who corrupts the laws is likely to corrupt the young also.

The Apology and Crito were probably written not long after Socrates' death. The Crito (possibly the earlier of the two), was perhaps written upon Socrates' request that his motives in declining to escape should be made known. Indeed, such a wish may have been the first inspiration of the
Socratic dialogues. T. Gomperz (Greek Thinkers, V, u, i, Germ, ed., II, 358) believes the Crito to be of later date and explains its tendency by assuming that it was Plato who was anxious to stress his loyalty. 'We do not know', writes Gomperz, 'the immediate situation to which this small dialogue owes its existence; but it is hard to resist the impression that Plato is here most interested in defending himself and his group against the suspicion of harbouring revolutionary views.' Although Gomperz's suggestion would easily fit into my general interpretation of Plato's views, I feel that the Crito is much more likely to be Socrates' defence than Plato's. But I agree with Gomperz's interpretation of its tendency. Socrates had certainly the greatest interest in defending himself against a suspicion which endangered his life's work. Regarding this interpretation of the contents of the Crito, I again agree fully with Taylor (Socrates, 124 f.). But the loyalty of the Crito and its contrast to the obvious disloyalty of the Republic which quite openly takes sides with Sparta against Athens seems to refute Burnet's and Taylor's view that the Republic is Socratic, and that Socrates was more strongly opposed to democracy than Plato. (Cp. note 56 to this chapter.)

Concerning Socrates' affirmation of his loyalty to democracy, cp. especially the following passages of the Crito: 51d/e, where the democratic character of the laws is stressed, i.e., the possibility that the citizen might change the laws without violence, by rational argument (as Socrates puts it, he may try to convince the laws); 52b, f., where Socrates insists that he has no quarrel with the Athenian constitution; 53c/d, where he describes not only virtue and justice but especially institutions and laws (those of Athens) as the best things among men; 54c, where he says that he may be a
victim of men,  
but insists that he is not a victim of the laws.  

In view of all these passages (and especially of  
Apology, 32C; cp. note 8 to  
chapter 7), we must, I believe, discount the one  
passage which looks very  

CHAPTER 10/NOTES 54-55 257  

different, viz. 526, where Socrates by implication  
praises the constitutions  
of Sparta and Crete. Considering especially 52b/c,  
where Socrates said that  
he was not curious to know other states or their laws,  
one may be tempted to  
suggest that the remark on Sparta and Crete in 526 is  
an interpolation, made  
by somebody who attempted to reconcile the Crito with  
later writings, especially  
with the Republic. Whether that is so or whether the  
passage is a Platonic  
addition, it seems extremely unlikely that it is  
Socratic. One need only  
remember Socrates' anxiety not to do anything which  
might be interpreted  
as pro-Spartan, an anxiety of which we know from  
Xenophon's Anabasis, III,  
i, 5. There we read that * Socrates feared that he'  
(i.e., his friend, the young  
Xenophon another of the young black sheep) ' might be  
blamed for being  
disloyal; for Cyrus was known to have assisted the  
Spartans in the war against  
Athens.' (This passage is certainly much less suspect  
than the Memorabilia;  
there is no influence of Plato here, and Xenophon  
actually accuses himself,  
by implication, of having taken his obligations to his  
country too lightly, and  
of having deserved his banishment, mentioned in op.  
cit., V, 3, 7, and VII,  
7, 57-)  

54 Apology, soc/sia.
Platonists, of course, would all agree with Taylor who says in the last sentence of his Socrates: 'Socrates had just one *successor "Plato.' Only Grote seems sometimes to have held views similar to those stated in the text; what he says, for instance, in the passage quoted here in note 21 to chapter 7 (see also note 15 to chapter 8) can be interpreted as at least an expression of doubt whether Plato did not betray Socrates. Grote makes it perfectly clear that the Republic (not only the Laws) would have furnished the theoretical basis for condemning the Socrates of the Apology, and that this Socrates would never have been tolerated in Plato's best state. And he even points out that Plato's theory agrees with the practical treatment meted out to Socrates by the Thirty.

For the remarks on the Laws, made later in this paragraph, cp. especially the passages of the Laws referred to in notes 19-23 to chapter 8. Even Taylor, whose opinions on these questions are diametrically opposed to those presented here (see also the next note), admits: 'The person who first proposed to make false opinions in theology an offence against the state, was Plato himself, in the tenth Book of the Laws. 9 (Taylor, op. cit., 108, note i.)

In the text, I contrast especially Plato's Apology and Crito with his Laws. The reason for this choice is that nearly everybody, even Burnet and Taylor (see the next note) would agree that the Apology and the* Crito represent the Socratic doctrine, and that the Laws may be described as Platonic. It seems to me therefore very difficult to understand how Burnet and Taylor could possibly defend their opinion that Socrates' attitude towards democracy was more hostile than Plato's. (This opinion is expressed in Burnet's Greek Philosophy, I,
I have seen no attempt to
defend this view of Socrates, who fought for freedom
(cp. especially note 53 to
this chapter) and died for it, and of Plato, who wrote
the Laws.

Burnet and Taylor hold this strange view because they
are committed to
the opinion that the Republic is Socratic and not
Platonic; and because it
may be said that the Republic is slightly less anti-
democratic than the Platonic
Statesman and the Laws. But the differences between the
Republic and the
Statesman as well as the Laws are very slight indeed,
especially if not only the
first books of the Laws are considered but also the
last; in fact, the agreement
of doctrine is rather closer than one should expect in
two books separated by
at least one decade, and probably by three or more, and
most dissimilar in
temperament and style (see note 6 to chapter 4, and
many other places in
this book where the similarity, if not identity,
between the doctrines of the
Laws and the Republic is shown.) There is not the
slightest internal difficulty

in assuming that the Republic and the Laws are both
Platonic; but Burnet's and
Taylor's own admission that their theory leads to the
conclusion that Socrates
was not only an enemy of democracy but even a greater
enemy than Plato
shows the difficulty if not absurdity of their view
that not only the Apology
and the Crito are Socratic but the Republic as well.
(For all these questions,
see also the next note.)

I need hardly say that this sentence is an attempt
to sum up my inter-
pretation of the historical role of Plato's theory of
justice (for the moral failure
of the Thirty, cp. Xenophon's Hellenica, II., 4, 40-42)
; and particularly of
the main political doctrines of the Republic; an
interpretation which tries
to explain the contradictions among the early
dialogues, especially the Gorgias,
and the Republic, as arising from the fundamental
difference between the views
of Socrates and those of the later Plato. The cardinal
importance of the
question which is usually called the Socratic Problem
may justify my entering
here into a lengthy and partly methodological debate.

(1) The older solution of the Socratic Problem assumed
that a group of the
Platonic dialogues, especially the Apology and the
Crito, is Socratic (i.e., in the
main historically correct, and intended as such) while
the majority of the
dialogues are Platonic, including many of those in
which Socrates is the main
speaker, as for instance the Phaedo and the Republic.
The older authorities
justified this opinion often by referring to an 'independent witness', Xenophon,
and by pointing out the similarity between the
Xenophontic Socrates and the
Socrates of the 'Socratic' group of dialogues, and
the dissimilarities between
the Xenophontic 'Socrates' and the 'Socrates' of
the Platonic group of
dialogues. The metaphysical theory of Forms or Ideas,
more especially, was
usually considered Platonic.

(2) Against this view, an attack was launched by J.
Burnet, who is supported
by A. E. Taylor. Burnet denounced the argument on which
the 'older
solution' is based as circular and unconvincing. It is
not sound, he main-
tained, to select a group of dialogues solely because
the theory of Forms is
less prominent in them, to call them Socratic, and then
to say that the theory
of Forms was not Socrates' but Plato's invention. And
it is not sound to
claim Xenophon as an independent witness since we have no reason whatever to believe in his independence, and good reason to believe that he must have known a number of Plato's dialogues when he commenced writing the Memorabilia. Burnet suggested proceeding from the assumption that Plato really meant what he said, and that, when he made Socrates pronounce a certain doctrine, he believed, and wished his readers to believe, that this doctrine was characteristic of Socrates' teaching.

(3) Although Burnet's views on the Socratic Problem appear to me untenable, I believe that they have been most valuable and stimulating. A bold theory, even if it is false, always means progress; and Burnet's books are full of bold and most unconventional views on his subject. This is the more to be appreciated as a historical subject shows always a tendency to become stale. But much as I admire Burnet for his brilliant and bold theories, and much as I appreciate their salutary effect, I can hardly ever, on considering the evidence available to me, convince myself that these theories are tenable. Burnet, in his invaluable enthusiasm was, I believe, not always critical enough towards his own ideas. This is why others have found it necessary to criticize these ideas instead.

Regarding the Socratic Problem, I believe with many others that the view which I have described as the 'older solution' is fundamentally correct. This view has lately been well defended, against Burnet and Taylor, especially by G. G. Field (fe a and His Contemporaries, 10^30) and A. K. Rogers (The Socratic Problem, 1933); and many other scholars seem to adhere to it. In spite of the fact that the arguments so far offered appear to me convincing,
I may be permitted to add to them, using the results of
the present book.
But before proceeding to criticize Burnet, I may state
that it is to Burnet that
we owe our insight into the following principle of
method. Plato's evidence is
the only first-rate evidence available to us; all
other evidence is secondary. (Burnet
has applied this principle to Xenophon; but we must
apply it also to
Aristophanes, whose evidence was rejected by Socrates
himself, in the Apology;
see under (5), below.)

(4) Burnet explains that it is his method to assume 'that Plato really
meant what he said'. According to this methodological
principle, Plato's
'Socrates' must be intended as a portrait of the
historical Socrates. (Cp. Greek
Philosophy, I, 128, 1212 f., and note on p. 349/50;
cp. Taylor's Socrates, 14 f.,
32 f., 153.) I admit that Burnet's methodological
principle is a sound starting
point. But I shall try to show, under (5) that the
facts are such that they
soon force everybody to give it up, including Burnet
and Taylor. They are
forced, like all others, to interpret what Plato says.
But while others become
conscious of this fact, and therefore careful and
critical in their interpretations,
it is inevitable that those who cling to the belief
that they do not interpret
Plato but simply accept what he said make it impossible
for themselves to
examine their interpretations critically.

(5) The facts that make Burnet's methodology
inapplicable and force
him and all others to interpret what Plato said, are,
of course, the contradictions
in Plato's alleged portrait of Socrates. Even if we
accept the principle that
we have no better evidence than Plato's, we are forced
by the internal contradictions in his writing not to take him at his word, and to give up the assumption that he * really meant what he said '. If a witness involves himself in contradictions, then we cannot accept his testimony without interpreting it, even if he is the best witness available. I give first only two examples of such internal contradictions.

(a) The Socrates of the Apology makes a direct and clear statement that he is not interested in natural philosophy (and therefore not a Pythagorean) :

' The simple truth is, O Athenians, that I have nothing whatever to do with speculations about nature.* Socrates asserts that many who are present at the trial could testify to the truth of this statement; they have heard him speak, but neither in few nor in many words has anybody ever heard him speak about matters of natural philosophy. (Ap., 19, c-d.) On the other hand, we have (a') the Phaedo and the Republic. In these dialogues, Socrates appears as a Pythagorean philosopher of ' nature '; so much so that both Burnet and Taylor maintain that he was in fact a leading member of the Pythagorean school of thought.

Now I hold that (a) and (a') flatly contradict each other; and this situation is made worse by the fact that the dramatic date of the Republic is earlier and that of the Phaedo later than that of the Apology. This makes it impossible to reconcile (a) with (a') by assuming that Socrates either gave up Pythagoreanism in the last years of his life, between the Republic and the Apology, or that he was converted to Pythagoreanism in the last month of his life.

I do not pretend that there is no way of removing this contradiction by
some assumption or interpretation. Burnet and Taylor may have reasons, perhaps even good reasons, for trusting the Phaedo and the Republic rather than the Apology. (But they ought to realize that, assuming the correctness of Plato's portrait, any doubt of Socrates' veracity in the Apology makes of him one who lies for the sake of saving his skin.) Such questions, however, do not concern me at the moment. My point is rather that in accepting evidence (a') as against (a), Burnet and Taylor are forced to abandon their fundamental methodological assumption 'that Plato really meant what he said *; they must interpret.

260 CHAPTER ID/NOTE 56

But interpretations made unawares must be uncritical; this can be illustrated by the use made by Burnet and Taylor of Aristophanes' evidence. They hold that Aristophanes' jests would be pointless if Socrates had not been a natural philosopher. But it so happens that Socrates (I always assume, with Burnet .and Taylor, that the Apology is historical) foresaw this very argument. In his apology, he warned his judges against precisely this very interpretation of Aristophanes, insisting most earnestly (Ap., i8c, ff.; see also a0c-e) that he had neither little nor much to do with natural philosophy, but simply nothing at all. Socrates felt as if he were fighting against shadows in this matter, against the shadows of the past (Ap., i8d-e); but we now can say that he was also fighting the shadows of the future. For when he challenged his fellow-citizens to come forward those who believed Aristophanes and dared to call Socrates a liar not one came. It was 2,300 years before some Platonists made up their minds to answer his challenge.
(b) In the Apology (4oc, ff.) Socrates takes up an agnostic attitude towards the problem of survival; (b') the Phaedo consists mainly of elaborate proofs of the immortality of the soul. This difficulty is discussed by Burnet (in his edition of the Phaedo ', 1911, pp. xlviii ff.), in a way which does not convince me at all. (Cp. notes 9 to chapter 7, and 44 to the present chapter.) But whether he is right or not, his own discussion proves that he is forced to give up his methodological principle and to interpret what Plato says.

(d) Apart from these two flagrant contradictions, I may mention two further contradictions which could easily be neglected by those who do not believe that the Seventh Letter is genuine, but which seem to me fatal to Burnet who maintains that the Seventh Letter is authentic. Burnet's view (untenable even if we neglect this letter; cp. for the whole question note 26 (5) to chapter 3) that Socrates but not Plato held the theory of Forms, is contradicted in 342a, ff. of this letter; and his view that the Republic, more especially, is Socratic, in 326a (cp. note 14 to chapter 7). Of course, all these difficulties could be removed, but only by interpretation.

(e) There are a number of similar although at the same time more subtle and more important contradictions which have been discussed at some length in previous chapters, especially in chapters 6, 7 and 8. I may sum up the most important of these.

(e^ The attitude towards men, especially towards the young, changes in Plato's portrait in a way which cannot be Socrates' development. Socrates died for the right to talk freely to the young, whom he loved. But in the Republic, we find him taking up an attitude of
condescension and distrust
which resembles the disgruntled attitude of the
Athenian Stranger (admittedly
Plato himself) in the Laws and the general distrust of
mankind expressed so
often in this work. (Cp. text to notes 17-18 to chapter
4; 18-21 to chapter
7; and 57-58 to chapter 8.)

(e 2 ) The same sort of thing can be said about
Socrates' attitude towards
truth and free speech. He died for it. But in the
Republic, ' Socrates ' advocates lying; in the admittedly Platonic Statesman,
a lie is offered as truth,
and in the Laws, free thought is suppressed by the
establishment of an
Inquisition. (Gp. the same places as before, and
furthermore notes 1-23
and 40-41 to chapter 8; and note 55 to the present
chapter.)

(* 3 ) The Socrates of the Apology and some other
dialogues is intellectually
modest; in the Phaedo, he changes into a man who is
assured of the truth of his
metaphysical speculations. In the Republic, he is a
dogmatist, adopting an atti-
tude not far removed from the petrified
authoritarianism of the Statesman and of
the Laws. (Gp. text to notes 8-14 to chapter 7; and 15
and 33 to chapter 8.)

(* 4 ) The Socrates of the Apology is an individualist
; he believes in the
self-sufficiency of the human individual. In the
Gorgias, he is still an indivi-
dualist. In the Republic^ he is a radical collectivism
very similar to Plato's

CHAPTER ID/NOTE 56 26 1

position in the Laws. (Cp. notes 25 and 35 to chapter 5
; text to notes 26,
32, 36 and 48-54 to chapter 6 and note 45 to the
present chapter.)
Again we can say similar things about Socrates' equalitarianism. In the Meno he recognizes that a slave participates in the general intelligence of all human beings, and that he can be taught even pure mathematics; in the Gorgias, he defends the equalitarian theory of justice. But in the Republic, he despises workers and slaves and is as much opposed to equalitarianism as is Plato in the Timaeus and in the Laws. (Cp. the passages mentioned under (* 4); furthermore, notes 18 and 29 to chapter 4; note 10 to chapter 7, and note 50 (3) to chapter 8, where Timaeus, 510 is quoted.)

The Socrates of the Apology and Crito is loyal to Athenian democracy. In the Meno and in the Gorgias (cp. note 45 to this chapter) there are suggestions of a hostile criticism; in the Republic (and, I believe, in the Menexenus), he is an open enemy of democracy; and although Plato expresses himself more cautiously in the Statesman and in the beginning of the Laws, his political tendencies in the later part of the Laws are admittedly (cp. text to note 32 to chapter 6) identical with those of the 'Socrates' of the Republic. (Cp. notes 53 and 55 to the present chapter and notes 7 and 14-18 to chapter 4.)

The last point may be further supported by the following. It seems that Socrates, in the Apology, is not merely loyal to Athenian democracy, but that he appeals directly to the democratic party by pointing out that Chaerephon, one of the most ardent of his disciples, belonged to their ranks. Chaerephon plays a decisive part in the Apology, since by approaching the Oracle, he is instrumental in Socrates' recognition of his mission in life, and thereby ultimately in Socrates' refusal to compromise with the Demos. Socrates introduces this important person by emphasizing the fact
(Apol. 9 soe/2ia) that Chaerephon was not only his friend, but also a friend of the people, whose exile he shared, and with whom he returned (presumably, he participated in the fight against the Thirty); that is to say, Socrates chooses as the main witness for his defence an ardent democrat. (There is some independent evidence for Chaerephon's sympathies, such as in Aristophanes' Clouds, 104, 501 ff.) Why does Socrates emphasize his relations with a militant member of the democratic party? We cannot assume that this was merely special pleading, intended to move his judges to be more merciful: the whole spirit of his apology is against this assumption. The most likely hypothesis is that Socrates, by pointing out that he had disciples in the democratic camp, intended to deny, by implication, the charge (which also was only implied) that he was a follower of the aristocratic party and a teacher of tyrants. The spirit of the Apology excludes the assumption that Socrates was pleading friendship with a democratic leader without being truly sympathetic with the democratic cause. And the same conclusion must be drawn from the passage (Apol., 32b~d) in which he emphasizes his faith in democratic legality, and denounces the Thirty in no uncertain terms.

(6) It is simply the internal evidence of the Platonic dialogues which forces us to assume that they are not entirely historical. We must therefore attempt to interpret this evidence, by proffering theories which can be critically compared with the evidence, using the method of trial and error. Now we have very strong reason to believe that the Apology is in the main historical, for it is the only dialogue which describes a public occurrence of considerable importance and well known to a great number of people. On the other hand,
we know that the Laws are Plato's latest work (apart from the doubtful Epinomis), and that they are frankly 'Platonic'. It is, therefore, the simplest assumption that the dialogues will be historical or Socratic so far as they agree with the tendencies of the Apology, and Platonic where they contradict these tendencies. (This assumption brings us practically back to the position which I have described above as the *older solution* of the Socratic Problem.)

262 CHAPTER ID/NOTE 56

If we consider the tendencies mentioned above under (*e^) to (*6), we find that we can easily order the most important of the dialogues in such a way that for any single of these tendencies the similarity with the Socratic Apology decreases and that with the Platonic Laws increases. This is the series.

Apology and Crito Meno Gorgias Phaedo Republic Statesman Timaeus Laws.

Now the fact that this series orders the dialogues according to all the tendencies (*e^) to (*6) is in itself a corroboration of the theory that we are here faced with a development in Plato's thought. But we can get quite independent evidence. 'Stylometric' investigations show that our series agrees with the chronological order in which Plato wrote the dialogues. Lastly, the series, at least up to the Timaeus, exhibits also a continually increasing interest in Pythagoreanism (and Eleaticism). This must therefore be another tendency in the development of Plato's thought.

A very different argument is this. We know, from Plato's own testimony
in the Phaedo, that Antisthenes was one of Socrates' most intimate friends; and we also know that Antisthenes claimed to preserve the true Socratic creed. It is hard to believe that Antisthenes would have been a friend of the Socrates of the Republic. Thus we must find a common point of departure for the teaching of Antisthenes and Plato; and this common point we find in the Socrates of the Apology and Crito, and in some of the doctrines put into the mouth of the *Socrates* of the Meno, Gorgias, and Phaedo.

These arguments are entirely independent of any work of Plato's which has ever been seriously doubted (as the Alcibiades I or the Theages or the Letters). They are also independent of the testimony of Xenophon. They are based solely upon the internal evidence of some of the most famous Platonic dialogues. But they agree with this secondary evidence, especially with the Seventh Letter, where in a sketch of his own mental development (325 f.), Plato even refers, unmistakably, to the key-passage of the Republic as his own central discovery: *I had to state .. that .. never will the human race be saved from its plight before either the race of the genuine and qualified philosophers gains political power, or the kings in the cities become genuine philosophers, with the help of God.*' ft (3263 ; cp. note 14 to chapter 7, and (d) in this note, above.) I cannot see how it is possible with Burnet to accept this letter as genuine without admitting that the central doctrine of the Republic is Plato's, not Socrates'; that is to say, without giving up the fiction that Plato's portrait of Socrates in the Republic is historical. (For further evidence, cp. for instance Aristotle, Sophist. EL, iSsby: 'Socrates raised questions, but gave no answers; for he confessed that he did not know.' This agrees with the Apology, but
hardly with the Gorgias, and certainly not with the Phaedo or the Republic. See furthermore Aristotle's famous report on the history of the theory of Ideas, admirably discussed by Field, op. cit.; cp. also note 26 to chapter 3.)

(7) Against evidence of this character, the type of evidence used by Burnet and Taylor can have little weight. The following is an example. As evidence for his opinion, that Plato was politically more moderate than Socrates, and that Plato's family was rather 'Whiggish', Burnet uses the argument that a member of Plato's family was named 'Demos'. (Gp. Gorg., 4816, 5i3b. It is, however, doubtful whether Demos’ father Pyrilampes there mentioned is really identical with Plato's uncle and stepfather mentioned in Charm., 58a, and Parm., i26b, i.e. whether Demos was a relation of Plato's.) What weight can this evidence have, I ask, compared with the historical record of Plato's two tyrant uncles; with the extant political fragments of Gritias (which remain in the family even if Burnet were right, which he hardly is, in attributing them to his grandfather; cp. Greek Phil., I, 338, note i); with the fact that Critias' father had belonged to the Oligarchy of the Four Hundred (Lys., 12, 66); and with Plato's own writings which combine family pride with not only anti-democratic but even anti-Athenian tendencies? (Gp. the eulogy, in Timaeus, 2oa, of an enemy of Athens like Hermocrates of Sicily, father-in-law of Dionysius I.) The hidden purpose behind this argument is, of course, to strengthen the theory that the Republic is Socratic. Another example of bad method may be taken from Taylor,
who argues
(Socrates, note 2 on pp. 148 f.; cp. also p. 162) in favour of the view that the
Phaedo is Socratic (cp. my note 9 to chapter 7): * In
the Phaedo . . the doctrine
that "learning is just recognition" is expressly said
by Simmias' (this is a
slip of Taylor's pen; the speaker is Gebes)' speaking
to Socrates, to be
"the doctrine you are so constantly repeating." Unless
we are willing to
regard the Phaedo as a gigantic and unpardonable
mystification, this seems
to me proof that the theory really belongs to
Socrates.' (For a similar argu-
ment, see Burnet's edition of the Phaedo, p. xii, end
of chapter II.) On this
I wish to make the following comments: (a) It is here
assumed that Plato
considered himself when writing this passage as a
historian, for otherwise his
statement would not be 'a gigantic and unpardonable
mystification'; in
other words, the most questionable and the most central
point of the theory
is assumed, (b) But even if Plato had considered
himself a historian (I do
not think that he did), the expression "a gigantic . .
etc.' seems to be too
strong. Taylor, not Plato, puts 'you J in italics.
Plato might only have
wished to indicate that he is going to assume that the
readers of the dialogue
are acquainted with this theory. Or he might have
intended to refer to the
Meno, and thus to himself. (This is the explanation
which appears to me the
most acceptable of all.) Or his pen might have slipped
for some other reason.
Such things are bound to occur, even to historians.
Burnet, to give an
example, certainly did consider himself a historian
when he wrote in his
Greek Philosophy, I, 64, of Xenophanes: 'The story
that he founded the Eleatic
school seems to be derived from a playful remark of
Plato's which would
also prove Homer to have been a Heraclitean.' To this,
Burnet adds the
footnote: 'Plato, Soph., 242d. See E. Gr. Ph. 2, p. 140'. Now I believe that this statement of a historian clearly implies three things, (i) that the passage of Plato which refers to Xenophanes is playful, i.e. not meant seriously,

(2) that this playfulness manifests itself in the reference to Homer, that is,

(3) by remarking that he was a Heraclitean, which would, of course, be a very playful remark since Homer lived long before Heraclitus. But none of these three implications can be upheld. For we find, (i) that the passage in the Sophist (242d) which refers to Xenophanes is not playful, but is especially recommended by Burnet himself in the methodological appendix to his Early Greek Philosophy as being important and as full of valuable historical information; (2) that it contains no reference at all to Homer, and (3) that another passage which does contain this reference (Theaet., 1796) and with which Burnet mistakenly identified Sophist 242d in Greek Philosophy, I (the mistake is not made in his Early Greek Philosophy 2), does not refer to Xenophanes, nor to Homer as a Heraclitean; but it says just the opposite, namely, that some of Heraclitus' ideas are as old as Homer (which is, of course, much less playful). This heap of misunderstandings, misinterpretations, and misquotations can be found in one single historical remark of such an outstanding professional historian as Burnet. From this we must learn that such things do happen, even with the best of historians: all men are fallible. (A more serious example of this kind of fallibility is the one discussed in note 26 (5) to chapter 3.) But if that is so, can it be right, I ask, to dismiss the possibility of a comparatively minor mistake in a statement made by Plato (who perhaps had no idea that his dramatic dialogues would ever be
considered as historical evidence) or to argue that such a mistake would be a gigantic and unpardonable mystification? This kind of special pleading is not sound methodology.

264 CHAPTER ID/NOTES 57-59

(8) The chronological order of those Platonic dialogues which play a role in these arguments is here assumed to be nearly the same as that of the stylometric list of Lutoslawski (The Origin and Growth of Plato's Logic, 1897). A list of those dialogues which play a role in the text of this book will be found in note 5 to chapter 3. It is drawn up in such a way that there is more uncertainty of date within each group than between the groups. A minor deviation from the stylometric list is the position of the Eutyphro which for reasons of its content (discussed in text to note 60 to this chapter) appears to me to be probably later than the Crito; but this point is of little importance. (Cp. also note 47 to this chapter.)

67 There is a famous and rather puzzling passage in the Second Letter (314x1): 'There is no writing of Plato nor will there ever be. What goes by his name really belongs to Socrates turned young and handsome.' The most likely solution of this puzzle is that the passage, if not the whole letter, is spurious. (Gp. Field, Plato and His Contemporaries, 200 f., where he gives an admirable summary of the reasons for suspecting the letter, and especially the passages '312d-313c and possibly down to 314c'; concerning 314*, an additional reason is, perhaps, that the forger might have intended to allude to, or to give his interpretation of, a somewhat similar remark in the Seventh Letter, 341 b/c, quoted in note 32 to chapter 8.) But
if for a moment we assume
with Burnet (Greek Philosophy, I, 212) that the passage
is genuine, then the
remark ' turned young and handsome ' certainly raises a
problem, especially
as it cannot be taken literally since Socrates is
presented in all the Platonic
dialogues as old and ugly (the only exception is the
Parmenides, where he is
hardly handsome, although still young). If genuine, the
puzzling remark
would mean that Plato quite intentionally gave an
idealized and not a historical
account of Socrates ; and it would fit our
interpretation quite well to see that
Plato was indeed conscious of re-interpreting Socrates
as a young and handsome
aristocrat who is, of course, Plato himself. (Gp. also
note 1 1 (2) to chapter 4,
note 20 (i) to chapter 6, and note 50 (3) to chapter
8.)

58 I am quoting from the first paragraph of Davies and
Vaughan's
Introductory Note to their translation of the Republic.
Gp. Grossman, Plato
To-Day, 96.

59 (i) The ' division ' or ' split ' in Plato's soul is
one of the most outstanding impressions of the Republic. Only a man who had to
struggle hard for
upholding his self-control or the rule of his reason
over his animal instincts,
could emphasize this point as much as Plato did ; cp.
especially the passages
referred to in note 34 to chapter 5 and note 15 (i)-(4)
; 17 ; and 19, to
chapter 3, which not only show an amazing similarity
with psycho-analytical
doctrines, but might also be claimed to exhibit strong
symptoms of repression.
(Cp. also the beginning of Book IX.)

Those Platonists who are not prepared to admit that
from Plato's longing
and clamouring for unity and harmony and unisonity, we
may conclude that
he was' himself disunited and disharmonious, may be
reminded that this way of arguing was invented by Plato. (Gp. Symposium, 200a, f., where Socrates argues that it is a necessary and not a probable inference that he who loves or desires does not possess what he loves and desires.)

What I have called Plato's political theory of the soul (see also text to note 32 to chapter 5), i.e. the division of the soul according to the class-divided society, has long remained the basis of most psychologies. It is the basis of psycho-analysis too. According to Freud's theory, what Plato had called the ruling part of the soul tries to uphold its tyranny by a 'censorship', while the rebellious proletarian animal-instincts, which correspond to the social underworld, really exercise a hidden dictatorship; for they determine the policy of the apparent ruler. Since Heraclitus' 'flux' and 'war' the realm of social experience has strongly influenced the theories, metaphors, and symbols'

CHAPTER ID/NOTE 60 265

by which we interpret the world (and ourselves) to ourselves. I mention only Darwin's adoption (under the influence of Malthus) of the theory of competition.

(2) A remark may be added here on mysticism, its relation to the closed and open society and to the strain of civilization.

As McTaggart has shown, in his excellent study Mysticism (cp. Philosophical Studies, edited by S. V. Keeling, 1934, esp. pp. 47 f.), the fundamental ideas of mysticism are two: (a) the doctrine of the mystic union, i.e., the assertion that there is a greater unity in the world of realities than that which we recognize
in the world of ordinary experience, and (b) the
doctrine of the mystic intuition,
i.e. the assertion that there is a way of knowing which
* brings the known
into closer and more direct relation with what is known
* than is the relation
between the knowing subject and the known object in
ordinary experience.
McTaggart rightly asserts (p. 48) that ' of these two
characteristics the mystic
unity is the more fundamental ', since the mystic
intuition is ' an example
of the mystic unity \ We may add that a third
characteristic, less funda-
mental still, is (c) the mystic love, which is an
example of mystic unity and mystic
intuition.

Now it is interesting (and this has not been seen by
McTaggart) that in
the history of Greek Philosophy, the doctrine of the
mystic unity was first
clearly asserted by Parmenides in his holistic doctrine
of the one (cp. note 41
to the present chapter) ; next by Plato, who added an
elaborate doctrine of
mystic intuition and communion with the divine (cp.
chapter 8), of which
doctrine there are just the very first beginnings in
Parmenides ; and next
by the Neo-Platonics who elaborated the doctrine of the
mystic love, of which
only the beginning can be found in Plato (for example,
in his doctrine, Rep.,
475 ff., that the philosopher loves truth, which is
closely connected with the
doctrines of holism and the philosopher's communion
with the divine truth).

In view of these facts and of our historical analysis,
we are led to interpret
mysticism as one of the typical reactions to the
breakdown of the closed
society ; a reaction which, in its origin at least, is
directed against the open
society, and which may be described as an escape into
the dream of a paradise
in which the tribal unity reveals itself as the
unchanging reality.
This interpretation is in direct conflict with that of Bergson in his Two Sources of Morality and Religion; for Bergson asserts that it is mysticism which makes the leap from the closed to the open society.

It may be remarked that in the nineteenth century, especially in Hegel and Bergson, we find an evolutionary mysticism, which, by extolling change, seems to stand in direct opposition to Parmenides' and Plato's hatred of change. And yet, the underlying expedience of these two forms of mysticism seems to be the same, as shown by the fact, that an over-emphasis on change is common to both. Both are reactions to the frightening experience of social change; the one combined with the hope that change may be arrested the other with a somewhat hysterical (and undoubtedly ambivalent) acceptance of change as real, essential and welcome. Gp. also notes 29, 32 and 58 to chapter 24.

60 The Eutyphro, an early dialogue, is usually interpreted as an unsuccessful attempt of Socrates to define piety. Eutyphro himself is the caricature of a popular ' pietist ' who knows exactly what the gods wish. To Socrates' question ' What is piety and what is impiety ? ' he is made to answer : * Piety is acting as I do ! That is to say, prosecuting any one guilty of murder, sacrilege, or of any similar crime, whether he be your father or your mother . . ; while not to prosecute them is impiety ' (5, d/e.) Eutyphro is presented as prosecuting his father for having murdered a serf. (According to the evidence quoted by Grote, Plato, I, note to p. 312, every citizen was bound by Attic law to prosecute in such cases.)
81 Menexenus, 23513. Cp. note 35 to this chapter.

62 The claim that if you want security you must give up liberty has become a mainstay of the revolt against freedom. But nothing is less true. There is, of course, no absolute security in life. But what security can be attained depends on our own watchfulness, enforced by institutions to help us watch i.e. by democratic institutions which are devised (using Platonic language) to enable the herd to watch, and to judge, their watchdogs.

63 With the * variations ' and ' irregularities ', cp. Republic, 547a, quoted in the text to notes 39 and 40 to chapter 5. Plato's obsession with the problems of propagation and birth control may perhaps be explained in part by the fact that he understood the implications of population growth. Indeed (cp. text to note 7 to this chapter) the * Fall ', the loss of the tribal paradise, is caused by a ' natural ' or ' original ' fault of man, as it were: by a maladjustment in his natural rate of breeding. Cp. also notes 39 (3) to ch. 5, and 34 to ch. 4. With the next quotation further below in this paragraph, cp. Republic, 5666, and text to note 20 to chapter 4. Grossman, whose treatment of the period of tyranny in Greek history is excellent (cp. Plato To-Day, 27-30), writes:

' Thus it was the tyrants who really created the Greek State. They broke down the old tribal organization of primitive aristocracy .' (op. cit., 29).

This explains why Plato hated tyranny, perhaps even more than freedom: cp. Republic, 57 7c. (See, however, note 69 to this chapter.) His passages on tyranny, especially 565-568, are a brilliant sociological analysis of a consistent power-politich. I should like to call it the first attempt towards a
logic of power. (I chose this term in analogy to F. A.
von Hayek's use of the
term logic of choice for the pure economic theory.) The
logic of power is fairly
simple, and has often been applied in a masterly way.
The opposite kind of
politics is much more difficult; partly because the
logic of anti-power politics,
i.e. the logic of freedom, is hardly understood yet.

64 It is well known that most of Plato's political
proposals, including
the proposed communism of women and children, were 'in
the air' in the
Periclean period. Cq. the excellent summary in Adam's
edition of the

66 Cq. V. Pareto, Treatise on General Sociology, 1843
(English translation :
note i to chapter 13, where
the passage is quoted more fully.

86 Cq. the effect which Glaucon's presentation of
Lycophron's theory had
on Carneades (cq. note 54 to chapter 6), and later, on
Hobbes. The professed
' a-morality ' of so many Marxists is also a case in
point. Leftists frequently
believe in their own immorality. (This, although not
much to the point, is
sometimes more modest and more pleasant than the
dogmatic self-righteousness
of many reactionary moralists.)

67 Money is one of the symbols as well as one of the
difficulties of the open
society. There is no doubt that we have not yet
mastered the rational control
of its use; its greatest misuse is that it can buy
political power. (The most
direct form of this misuse is the institution of the
slave-market; but just
this institution is defended in Republic, 56$b; cq.
note 17 to chapter 4; and
in the Laws, Plato is not against money; cq. note 20
(i) to chapter 6.) From
the point of view of an individualistic society, money
is fairly important. It is part of the institution of the (partially) free market, which gives the consumer some measure of control over production. Without some such institution, the producer may control the market to such a degree that he ceases to produce for the sake of consumption, while the consumer consumes largely for the sake of production. The sometimes glaring misuse of money has made us rather sensitive on this point, and Plato's opposition between money and friendship is only the first of many conscious or unconscious attempts to utilize these sentiments for the purpose of political propaganda.

CHAPTER 10/NOTES 68/70 267

68 The group-spirit of tribalism is, of course, not entirely lost. It manifests itself, for instance, in the most valuable experiences of friendship and comradeship; also, in youthful tribalistic movements like the boy scouts (or the German Youth Movement), and in certain clubs and adult societies, as described, for instance, by Sinclair Lewis in Babbitt. The importance of this perhaps most universal of all emotional and aesthetic experiences must not be underrated. Nearly all social movements, totalitarian as well as humanitarian, are influenced by it. It plays an important role in war, and is one of the most powerful weapons of the revolt against freedom. A conscious and not unsuccessful attempt to revive it for the purpose of arresting society and of perpetuating a class rule seems to have been the English Public School System. (' No one can grow up to be a good man unless his earliest years were given to noble games ' is its motto, taken from Republic, 558b.)

Another product and symptom of the loss of the tribalistic group-spirit
is, of course, Plato's emphasis upon the analogy between politics and medicine (cp. chapter 8, especially note 4), an emphasis which expresses the feeling that the body of society is sick, i.e. the feeling of strain, of drift. ' From the time of Plato on, the minds of political philosophers seem to have recurred to this comparison between medicine and politics,' says G. E. G. Catlin (A Study of the Principles of Politics, 1930, note to 458, where Thomas Aquinas, G. Santayana, and Dean Inge are quoted to support his statement; cp. also the quotations in op. cit. 9 note to 37, from Mill's Logic). Gatlin also speaks most characteristically (op. cit., 459) of ' harmony ' and of the ' desire for protection, whether assured by the mother or by society '. (Gp. also note 18 to chapter 5.)

69 Gp. chapter 7 (note 24 and text; see Athen., XI, 508) for the names of seven such disciples of Plato (including Dionysius II and Dio). I suppose that Plato's repeated insistence upon the use, riot only of force, but of persuasion and force ' (cp. Laws, 722b, and notes 5, 10, and 18 to chapter 8), was meant as a criticism of the tactics of the Thirty, whose propaganda was indeed primitive. But this would imply that Plato was well aware of Pareto's recipe for utilizing sentiments instead of fighting them. That Plato's friend Dio (cp. note 25 to chapter 7) ruled Syracuse as a tyrant is admitted even by Meyer in his defence of Dio whose fate he explains, in spite of his admiration for Plato as a politician, by pointing out the ' gulf between ' (the Platonic) 4 theory and practice' (op. cit., V, 999). Meyer says of Dio (he. cit.), 'The ideal king had become, externally, inciistinguishable from the contemptible tyrant.' But he believes that, internally as it were, Dio remained an idealist, and that he suffered deeply when political necessity
forced murder and similar measures upon him. I think, however, that Dio acted according to Plato's theory; a theory which, by the logic of power, was driven in the Laws to admit even the goodness of tyranny (7096, ff. At the same place, there may also be a suggestion that the debacle of the Thirty was due to their great number: Critias alone would have been all right).

70 The tribal paradise is, of course, a myth (although some primitive people, most of all the Eskimos, seem to be happy enough). There may have been no sense of drift in the closed society, but there is ample evidence of other forms of fear fear of demoniac powers behind nature. The attempt to revive this fear, and to use it against the intellectuals, the scientists, etc., characterizes many late manifestations of the revolt against freedom. It is to the credit of Plato, the disciple of Socrates, that it never occurred to him to present his enemies as the offspring of the sinister demons of darkness. In this point, he remained enlightened. He had little inclination to idealize the evil which was to him simply debased, or degenerate, or impoverished goodness. (Only in one passage in the Laws, 8g6e and 8g8c, there is what may be a suggestion of an abstract idealization of evil.)

268 CHAPTER IO/NOTE 70

A note may be added here in connection with my remark on the return to the beasts. Since the intrusion of Darwinism into the field of human problems (an intrusion for which Darwin should not be blamed) there have been many 'social zoologists' who have proved that the human race is bound to degenerate
physically, because insufficient physical competition, and the possibility of protecting the body by the efforts of the mind, prevent natural selection from acting upon our bodies. The first to formulate this idea (not that he believed in it) was Samuel Butler, who wrote: "The one serious danger which this writer' (an Erewhonian writer) 'apprehended was that the machines' (and, we may add, civilization in general) * would so... lessen the severity of competition, that many persons of inferior physique would escape detection and transmit their inferiority to their descendants." (Erewkon, 1872; cp. Everyman's edition, p. 161.) The first as far as I know to write a bulky volume on this problem was W. Schallmayer, one of the founders of modern racialism. In fact, Butler's theory has been continually rediscovered (especially by 'biological naturalists' in the sense of chapter 5, above). According to a modern writer (G. H. Eastbrooks, Man: The Mechanical Misfit, 1941), man made the decisive mistake when he became civilized, and especially when he began to help the weak; before this, he was an almost perfect man-beast; but civilization, with its artificial methods of protection, must ultimately destroy itself. In reply to such arguments, we should, I think, first admit that man is likely to disappear one day from this world; but we should add that this is also true of even the most perfect beasts, to say nothing of those which are only 'almost perfect'. The theory that the human race might have lived a little longer if it had not made the fatal mistake of helping the weak is most questionable; but even if it were true is mere length of survival of the race really all we want? Or is the almost perfect man-beast so eminently valuable that we should prefer a prolongation of his existence (he did exist for quite a long time, anyway) to our experiment of
helping the weak?

Mankind, I believe, has not done so badly. In spite of the treason of some of its intellectual leaders, in spite of the stupefying effects of Platonic methods in education and the devastating results of propaganda, there have been some amazing successes. Many of the weak have been helped, and for a hundred years, slavery has been practically abolished. Some say it will soon be re-introduced. I feel more optimistic; and after all, it will depend on ourselves. But even if all this should be lost again, and even if we had to return to the almost perfect man-beast, all this would not alter the fact that slavery once, for a short time, disappeared from the face of the earth. This fact, I believe, may comfort some of us for all our misfits, mechanical and otherwise; and to some of us it may even atone for the fatal mistake our forefathers made when they missed the golden opportunity of arresting all change of returning to the cage of the closed society and of establishing, for ever and ever, a huge zoo of almost perfect monkeys.
STOP DREAMING AND BECOME AN AUTHOR YOURSELF TODAY!

It's Free, Easy and Fun!

At our sister website, Foboko.com, we provide you with a free 'Social Publishing Wizard' which guides you every step of the eBook creation/writing process and let's your friends or the entire community help along the way!

LOGON ONTO FOBOKO.COM and get your story told!
THE BEST BOOKS IN YOUR POCKET!

Jam-pack your Kindle, iPad, Android, Nook, or any device, full of amazing books with your own e-GO! Library. At your leisure pick your favorite titles from a wide array of categories for all tastes. Total speed, convenience & mobility are yours. Your e-GO! Library is an innovative way “to have & hold” a fresh and plentiful supply of great titles. It’s seemingly endless entertainment without the need for the internet or downloading! All in a preloaded, USB memory flash drive which puts a thousand of today's best books in your pocket!

Enjoy Anywhere Anytime!

✔ CONVENIENCE of Preloaded USB flash drive
✔ FORMATS for ALL eReaders & Mobile Devices
✔ NO need for Wi-Fi or Internet
✔ AVOID Downloading
✔ SAVE Tons of Time & Effort
✔ PERFECT for Travel
✔ FUN for the Whole Family
✔ MAKES a Great Gift
